BASIC INFORMATION

Features

Introducing American LSI (C-CUBE) Company's latest So C AV system (AVS) recorder processor this unit is, capable of recording all kinds of AV input signals, such as TV, ordinary VCD and DV video camera, into high quality DVD disc. In addition, this player is also a high capacity DVD player, capable of realizing all functions of ordinary DVD player. His 2-in-1 unit will make your life more enjoyable and wonderful.

Support multiple input sources recording

- 1 Composite video input
- 2 S-video input
- 3 TV tuner input
- 4 DV input
- 5 Analog audio terminal input
6. SCART input
- 7.USB input

Provide multiple output signals

1. Composite video output
2. S-video output
3. Component video output
4. SCART output
5. 5.1 CH audio outputs
6. Optical / Coaxial output

Multiple DVD recording qualities

This unit provides you with 4 kinds of recording qualities, each of which has different resolution and recording time, to make you choose between high resolution picture quality and super long time of recording.

Multiple recording methods

This unit facilitates your usage with three kinds of recording methods: ordinarily manual recording, time recording, OTR one-touch recording and DV recording.

Convenient menu operation

This unit incorporates convenient interface menu operation. No need for you to remember the multifarious function buttons on remote control, and you can realize the majority of functions through using a few direction and selection buttons.

Standby function

Remote control standby function makes your operation more convenient and helps you fulfill time recording function on the basis of saving electric power.

Highly intelligent upgrading function

This unit has automatic upgrading function to make you upgrade it into the latest edition with our upgrading disc at any time.

This player can use the following discs

This unit can play DVD, DVD+R, DVD+RW, VCD, SVCD, CD-DA and MP3.

This unit can record DVD+R and DVD+RW

BASIC INFORMATION

- 13. TIMER button**
Enter the timing record setup
- 14. STOP button**
Stop playing/recording
- 15. PLAY button**
Play a disc
- 16. REPEAT 1/ALL button**
Repeat playback
- 17. REPEAT A-B button**
Repeat A-B segment playback
- 18. REW button**
Fast backward play
- 19. FWD button**
Fast forward play
- 20. PREV button**
Skip backward
- 21. NEXT button**
Skip forward
- 22. RECORD button**
Record the external signals
- 23. TIME-SHIFT button**
Watch TV and display time shifting
- 24. MUTE button**
Mute the sound
- 25. AUDIO button**
Switch the audio channel
- 26. SUBTITLE button**
Change subtitle languages
- 27. ANGLE button**
Change camera angles
- 28. LIVE button**
From TV time shift cover to TV live
- 29. DUBBING button**
Copy program(s) from HDD to recordable disc
- 30. TS-SAVE button**
Save the time shift contents to HDD
- 31. FUNCTION button**
System menu
- 32. VOL- button**
Decrease volume
- 33. VOL+ button**
Increase volume
- 34. SLOW/SORT button**
Scan in slow forward or sort the HDD titles
- 35. CHANNEL \wedge /CHANNEL \vee button**
Change the TV channel up/down
- 36. PAUSE/STEP button**
Pause or Play frame by frame
- 37. INFO button**
Display/hide information menu
- 38. RETURN button**
Back to the previous menu
- 39. SELECT button**
Confirm the selected item
- 40. MENU button**
※ Display the disc menu
※ Open/Close PBC
- 41. GOTO button**
Play from the desired location
- 42. Number 0-9 button**
- 43. DV/USB button**
Switch to DV status or USB file list menu
- 44. SOURCE button**
Switch external input signal source
- 45. OPEN/CLOSE button**
Open or close the disc tray

TSB41AB1

IEEE 1394a-2000 ONE-PORT CABLE

TRANSCEIVER/ARBITER

SLLS423D – JUNE 2000 – REVISED SEPTEMBER 2002

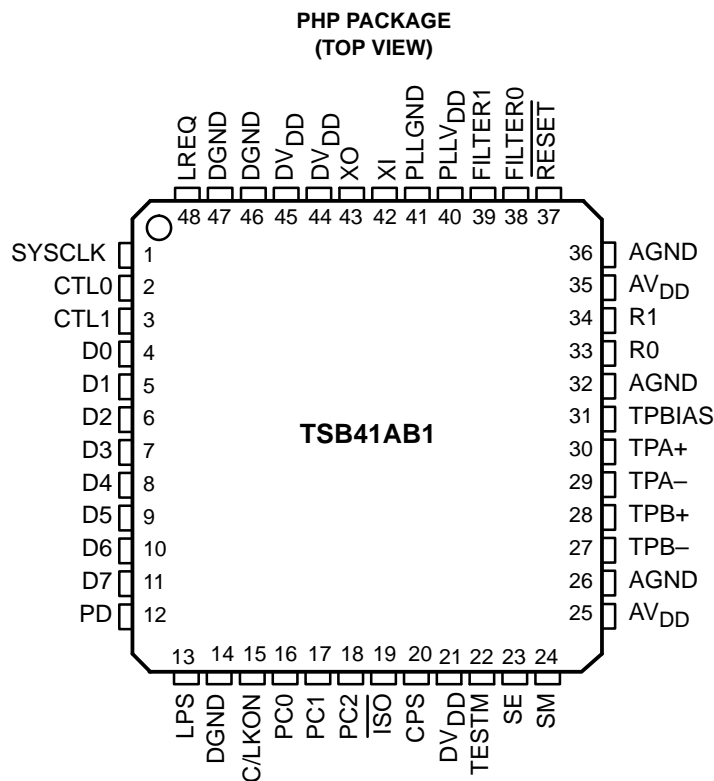

description (continued)

required for normal network operation regardless of the state of the PHY-LLC interface. When the interface is in the reset or disabled state and LPS is again observed active, the PHY initializes the interface and returns it to normal operation.

When the PHY-LLC interface is in the low-power disabled state, the TSB41AB1 automatically enters a low-power mode if the port is inactive (disconnected, disabled, or suspended). In this low-power mode, the TSB41AB1 disables its internal clock generators and also disables various voltage and current reference circuits depending on the state of the port (some reference circuitry must remain active in order to detect new cable connections, disconnections, or incoming TPBIAS, for example). The lowest power consumption (the ultralow-power sleep mode) is attained when the port is either disconnected, or disabled with the port interrupt enable bit cleared. The TSB41AB1 exits the low-power mode when the LPS input is asserted high or when a port event occurs which requires that the TSB41AB1 become active in order to respond to the event or to notify the LLC of the event (for example, incoming bias is detected on a suspended port, a disconnection is detected on a suspended port, a new connection is detected on a nondisabled port, etc.). The SYSCLK output becomes active (and the PHY-LLC interface is initialized and becomes operative) within 7.3 ms after LPS is asserted high when the TSB41AB1 is in the low-power mode.

The PHY uses the C/LKON terminal to notify the LLC to power up and become active. When activated, the C/LKON signal is a square wave of approximately 163-ns period. The PHY activates the C/LKON output when the LLC is inactive and a wake-up event occurs. The LLC is considered inactive when either the LPS input is inactive, as described above, or the LCtrl bit is cleared to 0. A wake-up event occurs when a link-on PHY packet addressed to this node is received, or when a PHY interrupt occurs. The PHY deasserts the C/LKON output when the LLC becomes active (both LPS active and the LCtrl bit set to 1). The PHY also deasserts the C/LKON output when a bus reset occurs unless a PHY interrupt condition exists which would otherwise cause C/LKON to be active.

Clock Signals			
DATACLK	40	O	Line-locked data output clock.
XTAL1	74	I	External clock reference input. It may be connected to an external oscillator with a 1.8-V compatible clock signal or a 14.31818-MHz crystal oscillator.
XTAL2	75	O	External clock reference output. Not connected if XTAL1 is driven by an external single-ended oscillator.
Digital Video			
C[9:0]/GPIO[9:0]	57, 58, 59, 60, 63, 64, 65, 66, 69, 70	O	Digital video output of CbCr, C[9] is MSB and C[0] is LSB. Unused outputs can be left unconnected. Also, these terminals can be programmable general-purpose I/O. For the 8-bit mode, the two LSBs are ignored.
D_BLUE	58	I	Digital BLUE input from overlay device
D_GREEN	59	I	Digital GREEN input from overlay device
D_RED	60	I	Digital RED input from overlay device
FSO	57	I	Fast-switch overlay between digital RGB and any video
Y[9:0]	43, 44, 45, 46, 47, 50, 51, 52, 53, 54	O	Digital video output of Y/YCbCr, Y[9] is MSB and Y[0] is LSB. For the 8-bit mode, the two LSBs are ignored. Unused outputs can be left unconnected.
Miscellaneous Signals			
FSS/GPIO	35	I/O	Fast-switch (blanking) input. Switching signal between the synchronous component video (YPbPr/RGB) and the composite video input. Programmable general-purpose I/O
GLCO/I2CA	37	I/O	Genlock control output (GLCO). Two Genlock data formats are available: TI format and real time control (RTC) format. During reset, this terminal is an input used to program the I ² C address LSB.
INTREQ	30	O	Interrupt request
PWDN	33	I	Power down input: 1 = Power down 0 = Normal mode
RESETB	34	I	Reset input, active low

Table 1–1. Terminal Functions (Continued)

TERMINAL NAME	NUMBER	I/O	DESCRIPTION
Host Interface			
SCL	28	I	I ² C clock input
SDA	29	I/O	I ² C data bus
Power Supplies			
AGND	26	I	Analog ground. Connect to analog ground.
A18GND_REF	13	I	Analog 1.8-V return
A18VDD_REF	12	I	Analog power for reference 1.8 V
CH1_A18GND	79	I	Analog 1.8-V return
CH2_A18GND	10		
CH3_A18GND	15		
CH4_A18GND	24		
CH1_A18VDD	78	I	Analog power. Connect to 1.8 V.
CH2_A18VDD	11		
CH3_A18VDD	14		
CH4_A18VDD	25		
CH1_A33GND	3	I	Analog 3.3-V return
CH2_A33GND	6		
CH3_A33GND	19		
CH4_A33GND	22		
CH1_A33VDD	4	I	Analog power. Connect to 3.3 V.
CH2_A33VDD	5		
CH3_A33VDD	20		
CH4_A33VDD	21		
DGND	27, 32, 42, 56, 68	I	Digital return
DVDD	31, 41, 55, 67	I	Digital power. Connect to 1.8 V.
IOGND	39, 49, 62	I	Digital power return
IOVDD	38, 48, 61	I	Digital power. Connect to 3.3 V or less for reduced noise.
PLL_A18GND	77	I	Analog power return
PLL_A18VDD	76	I	Analog power. Connect to 1.8 V.
Sync Signals			
HS/CS/GPIO	72	I/O	Horizontal sync output or digital composite sync output Programmable general-purpose I/O
VS/VBLK/GPIO	73	I/O	Vertical sync output (for modes with dedicated VSYNC) or VBLK output Programmable general-purpose I/O
FID/GPIO	71	I/O	Odd/even field indicator output. This terminal needs a pulldown resistor. Programmable general-purpose I/O
AVID/GPIO	36	I/O	Active video indicator output Programmable general-purpose I/O

Control Port Power	VLC	□ 14	□ 15	M2	Mode 2

Pin Name	#	Pin Description
VLS	1	Serial Audio Interface Power (Input) - Determines the required signal level for the serial audio interface. Refer to the Recommended Operating Conditions for appropriate voltages. Applies to pins 2-7.
SDIN1 SDIN2 SDIN3	2 3 4	Serial Audio Data Input (Input) - Input for two's complement serial audio data. SDIN1 corresponds to AOUT1x, SDIN2 corresponds to AOUT2x and SDIN3 corresponds to AOUT3x.
SCLK	5	Serial Clock (Input) - Serial clock for the serial audio interface.
LRCK	6	Left / Right Clock (Input) - Determines which channel, Left or Right, is currently active on the serial audio data line. The frequency of the left/right clock must be at the audio sample rate, Fs.
MCLK	7	Master Clock (Input) - Clock source for the delta-sigma modulator and digital filters. Table 6 illustrates several standard audio sample rates and the required master clock frequency.
VD	8	Digital Power (Input) - Positive power supply for the digital section. Refer to the Recommended Operating Conditions for appropriate voltages.
GND	9 21	Ground (Input) - Ground reference. Should be connected to analog ground.
RST	10	Reset (Input) - The device enters a low power mode and all internal registers are reset to their default settings when low. The control port cannot be accessed when Reset is low.
VLC	14	Control Port Interface Power (Input) - Determines the required signal level for the control port and provides power for bidirectional control port pins. Refer to the Recommended Operating Conditions for appropriate voltages. Applies to pins 10-13 and 15.
FILT+	16	Positive Voltage Reference (Output) - Positive reference voltage for the internal sampling circuits. Requires the capacitive decoupling to GND as shown in the Typical Connection Diagram.

3. PIN DESCRIPTION

Interface Power	VL	□ 1	16	□ RST	Reset
Master Clock	MCLK	□ 2	15	□ VQ	Quiescent Voltage
Serial Clock	SCLK	□ 3	14	□ AINL	Left Channel Analog Input
Serial Data Output	SDATA	□ 4	13	□ AINR	Right Channel Analog Input
Analog Power	VA	□ 5	12	□ REF_GND	Reference Ground
Ground	GND	□ 6	11	□ FILT+	Positive Voltage Reference
Left Right Clock	LRCK	□ 7	10	□ TST	Test Input
MCLK Divide	DIV	□ 8	9	□ DIF	Digital Interface Format

Interface Power	1	VL (Input) - Digital interface power supply. Typically 1.8 to 3.3 VDC.
Master Clock	2	MCLK (Input) - The master clock frequency must be either 256x, 384x, 512x, 768x or 1024x the input sample rate in Base Rate Mode (BRM) and 128x, 192x, 256x, 384x the input sample rate in High Rate Mode (HRM). Table 1 illustrates several standard audio sample rates and the required master clock frequencies.
Serial Clock	3	SCLK (Input/Output) - Clocks the individual bits of the serial data out of the SDOUT pin. The required relationship between the Left/Right clock, serial clock and serial data is defined by the DIF pin.
Serial Audio Data Out (M/S select)	4	SDATA (Output) - This pin serves two functions. First: two's complement MSB-first serial data is output on this pin. The data is clocked out of SDOUT via the serial clock and the channel is determined by the Left/Right clock. The required relationship between the Left/Right clock, serial clock and serial data is defined by the DIF pin. Second: Master/Slave mode selection is determined, at startup, by a 47 kOhm pullup/pulldown on this line. A pullup to VL selects Master mode and a pulldown to GND selects Slave mode.
Analog Power	5	VA (Input) - Analog power supply. Typically 1.8 to 3.3 VDC.
Ground	6	GND (Input) - Ground Reference.

Sample Rate (kHz)	MCLK (MHz)

PIN CONFIGURATION

2-Input 1-Output Video Switch (75Ω driver)/3-Input 1-Output Video Switch (75Ω driver) Monolithic IC MM1221~MM1228

Outline

These ICs are high grade video switches with 2-input 1-output or 3-input 1-output and built-in 75Ω driver. The series includes those with and without built-in clamp and 6dB amp circuits. Circuit configuration tables and block diagrams are as follows. MM1228 is used as the representative model in this description.

MM1221~MM1228 Series Circuit Configuration Table

Model name	# of Inputs	# of Outputs	6dB amp circuit	Clamp circuit	Power supply voltage range
MM1221	2	1	No	No	8~13V
MM1222	2	1	Yes	No	8~13V
MM1223	3	1	No	No	8~13V
MM1224	3	1	Yes	No	8~13V
MM1225	2	1	No	Yes	4.7~13V
MM1226	2	1	Yes	Yes	4.7~13V
MM1227	3	1	No	Yes	4.7~13V
MM1228	3	1	Yes	Yes	4.7~13V

MM1221~MM1228 Input/Output Voltage Measurement Values (typ.)

Model name	Power supply voltage	5V	9V	12V	Unit
MM1221	Input voltage		4.53	6.05	V
	Output voltage		4.5	6.1	V
MM1222	Input voltage		4.05	5.4	V
	Output voltage		5.34	7.12	V
MM1223	Input voltage		4.53	6.05	V
	Output voltage		4.5	6.1	V
MM1224	Input voltage		4.05	5.4	V
	Output voltage		5.34	7.12	V
MM1225	Input voltage	1.27	2.17	2.86	V
	Output voltage	1.31	2.25	2.96	V
MM1226	Input voltage	1.3	2.2	2.9	V
	Output voltage	1.4	2.23	2.88	V
MM1227	Input voltage	1.27	2.17	2.86	V
	Output voltage	1.31	2.25	2.96	V
MM1228	Input voltage	1.3	2.2	2.9	V
	Output voltage	1.4	2.23	2.88	V

LP2995 DDR Termination Regulator

General Description

The LP2995 linear regulator is designed to meet the JEDEC SSTL-2 and SSTL-3 specifications for termination of DDR-SDRAM. The device contains a high-speed operational amplifier to provide excellent response to load transients. The output stage prevents shoot through while delivering 1.5A continuous current and transient peaks up to 3A in the application as required for DDR-SDRAM termination. The LP2995 also incorporates a V_{SENSE} pin to provide superior load regulation and a V_{REF} output as a reference for the chipset and DDR DIMMS.

Patents Pending

Features

- Low output voltage offset
- Works with +5v, +3.3v and 2.5v rails
- Source and sink current
- Low external component count
- No external resistors required
- Linear topology
- Available in SO-8, PSOP-8 or LLP-16 packages
- Low cost and easy to use

Applications

- DDR Termination Voltage
- SSTL-2
- SSTL-3

Typical Application Circuit

20039302

PQxxxEZ02Z Series

Low Voltage Operation Low Power-loss Voltage Regulator

■ Features

- Low voltage operation (Minimum operating voltage: 2.35V)
2.5V input → available 1.5 to 1.8V output
- Low dissipation current
Dissipation current at no load: MAX.2mA
Output OFF-state dissipation current: MAX.5μA
- Low power-loss
- Built-in overcurrent and overheat protection functions

■ Applications

- Power supplies for personal computers and peripheral equipment
- Power supplies for various electronic equipment such as DVD player or STB

■ Model Line-up

Output current (I _o)	Output Voltage (V _o)		
	1.5V	1.8V	2.5V
2.0A	PQ015EZ02Z	PQ018EZ02Z	PQ025EZ02Z

■ Outline Dimensions

(Unit : mm)

■ Absolute Maximum Ratings

(T_a=25°C)

Parameter	Symbol	Rating	Unit
*1 Input voltage	V _{IN}	10	V
*1 ON/OFF control terminal voltage	V _c	10	V
Output current	I _o	2	A
*2 Power dissipation	P _d	8	W
*3 Junction temperature	T _j	150	°C
Operating temperature	T _{opr}	-40 to + 85	°C
Storage temperature	T _{stg}	-40 to +150	°C
Soldering temperature	T _{sol}	260 (10s)	°C

*1 All are open except GND and applicable terminals

*2 P_d:With infinite heat sink

*3 Overheat protection may operate at 125 <-T_j<-150°C

•Please refer to the chapter " Handling Precautions ".

TERMINATION AT E5.1

TERMINATION AT DDR

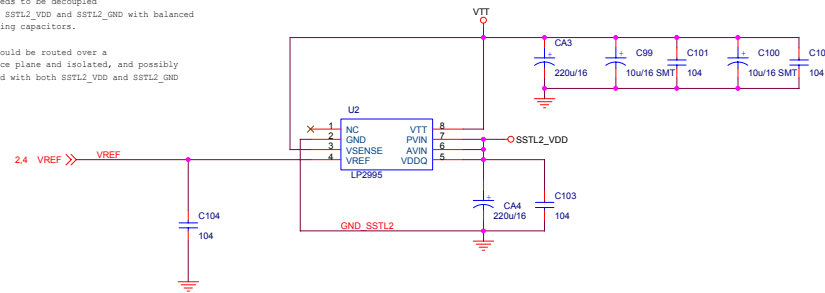

The VTT side of the termination resistors should be placed on a wide VTT island on the surface layer. The island is located at each end of the bus, so it does not interfere with the signal routing.

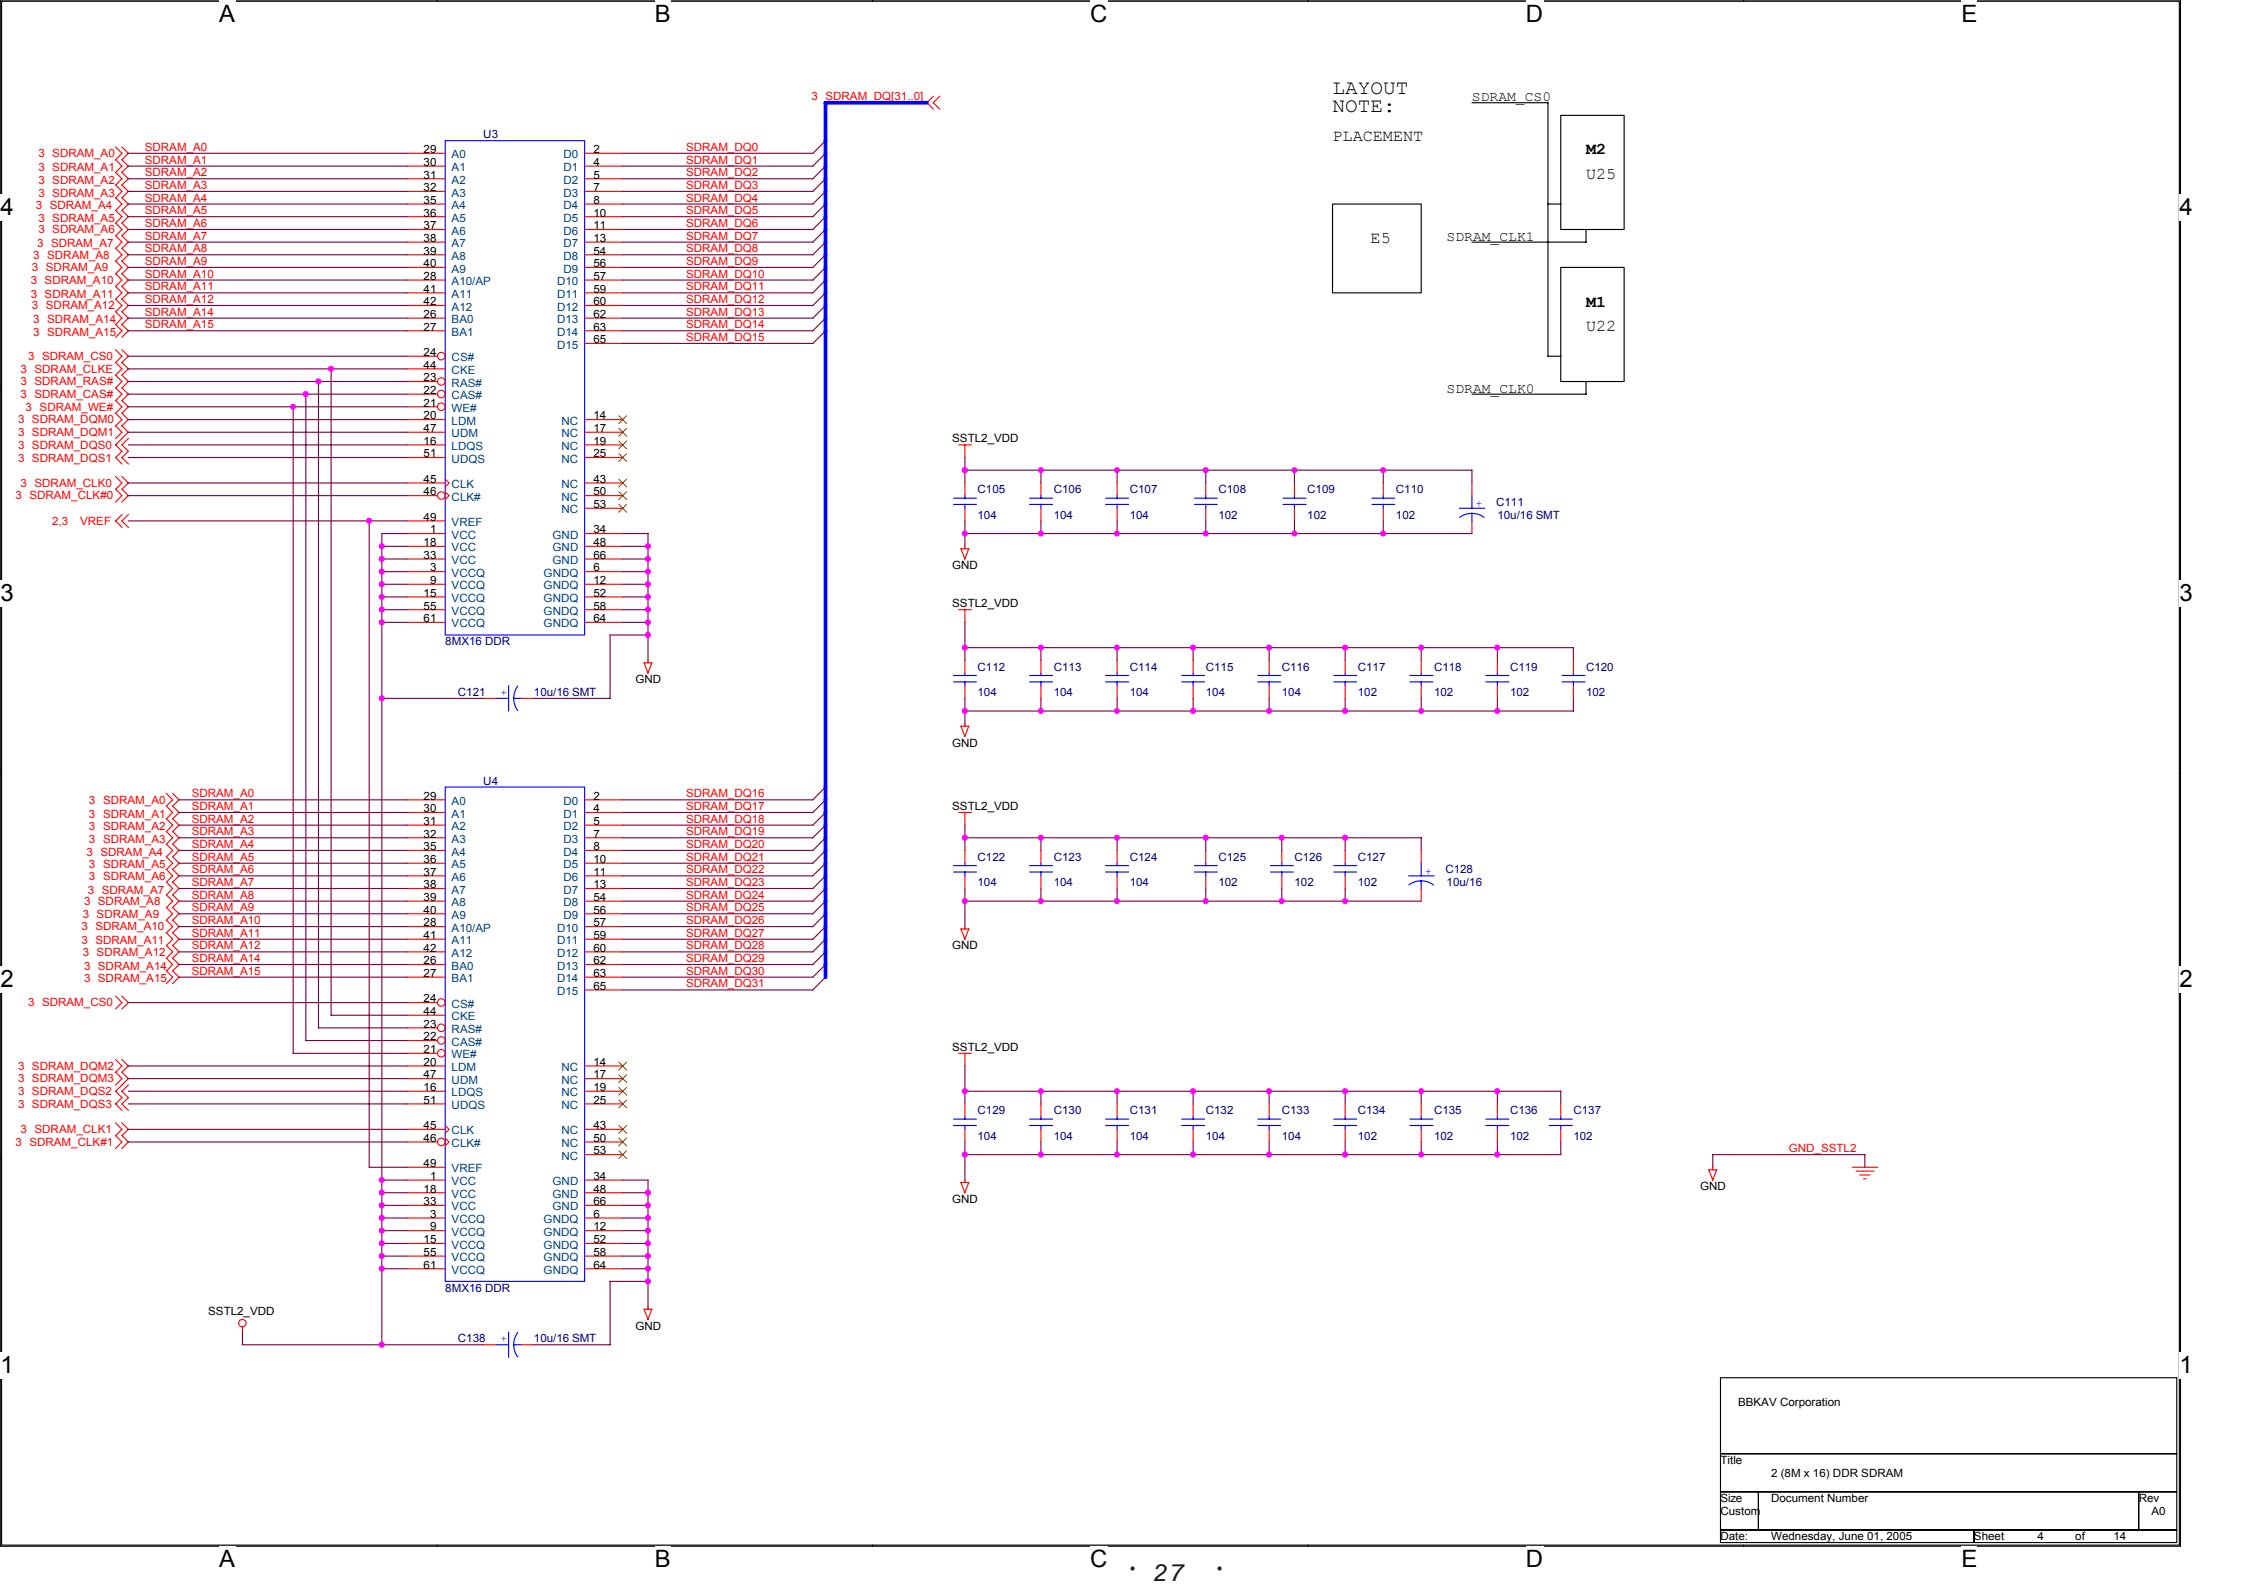

DDR TERMINATION VOLTAGE REGULATOR

VREF needs to be decoupled to both SSTL2_VDD and SSTL2_GND with balanced decoupling capacitors.

VREF should be routed over a reference plane and isolated, and possibly shielded with both SSTL2_VDD and SSTL2_GND
