VT-L1500E

AF MECHANISM

This model uses a AF MECHANISM.
Refer to the following manual for the AF MECHANISM.

Manuals releted to the VT-L1500E

Name of manual	Manual No.
AF Mechanism	4412E
VT-L1100E	8609E

VHS

This video desk is a VHS type video recorder. For proper operation, only the VHS type cassette must be used.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

VIDEO CASSETTE RECORDER

March 1997 Image & Information Media Systems Division, Tokai

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts have special safety-related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for a higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual. Electrical components having such features are identified by marking with a ⚠ on the schematics and the parts list in this Service Manual. The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards. Product safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies for, HITACHI Service Manual may be obtained at a nominal charge from HITACHI SALES CORPORATION.

CONTENTS

CHAPTER 7 SCHEMATIC & CIRCUIT BOARD DIAGRAMS

CHAPTER 8 MICROPROCESSOR PIN FUNCTION TABLE/ BLOCK DIAGRAMS

CHAPTER 1 GENERAL INFORMATION

1. SPECIFICATIONS

Video Cassette:	VHS type
Recording:	Rotary two-head helical scan azimuth recording
Tape Speed:	7.8 mm/sec. (09mode)
Tape Width:	12.7 mm
Operation Temperature:	5℃ to 40℃
Video:	PAL colour (system I) & CCIR monochrome signals (625 lines)
Recording Lengths:	9,27hours
Video Input:	1 Vp-p 75 ohm unbalanced
Video Output:	1 Vp-p 75 ohm unbalanced
S/N Ratio (Video):	More than 40 dB (09 mode)
S/N Ratio (Audio):	More than 40 dB (09 mode)
Horizontal Resolution:	Colour: 240 lines (09 mode) Monochrome: 350 lines (09 mode)
Audio Input:	-8dBm 50 Kohm unbalanced
Audio Output:	-10dBm 600 ohm unbalanced
Audio Frequency Range:	100 Hz to 3 kHz (09 mode)
Power:	AC 230V, 50Hz
Power Consumption:	23W
Cabinet Size:	435 mm (W) × 94 mm (H) × 366 mm(D)
Weight:	Approx. 6.2 kg

* Design and specifications are subject to change without notice.

2. COMPARISON OF FEATURES

← : Same as left

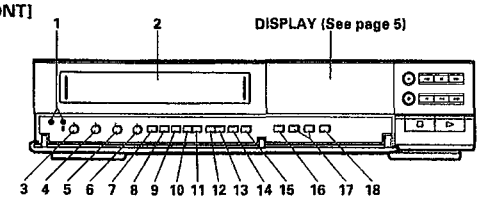
3. OPERATION

CONTROLS AND FUNCTIONS

[FRONT]



1 RESET BUTTONS
Press these buttons at the same time to clear all (microprocessor) functions.
Press the "S" button to reset the system (This does not erase the stored information.)

2 CASSETTE COMPARTMENT

3 SHARPNESS CONTROL
Adjust the picture quality to hard or soft during playback

4 TRACKING CONTROL
Adjust to optimize the picture quality during playback at the 09 and 27 hour speeds

5 SLOW TRACKING CONTROL
Adjust to optimize the picture quality in the SLOW PLAY mode, e.g. L27 hours speed

6 V LOCK CONTROL
Reduces vertical jitter in the still play mode

7 PROGRAM BUTTON
Press to select one of the six programmable functions

8 START/STOP BUTTON
Press to start or stop the programming of a programmable function (Press once to start the programming sequence and a second time to stop (end) it.)

9 SET BUTTON
Press to select the specific value which is to be changed with the UP/DOWN buttons

10 DOWN BUTTON
Press to decrement, change or reverse to the previous/lower value

11 UP BUTTON
Press to increase, change or advance to the next higher value

12 V-POS (VERTICAL POSITION) BUTTON
Press repeatedly to control the vertical position of the programmable display on the monitor

13 H-POS (HORIZONTAL POSITION) BUTTON
Press repeatedly to control the horizontal position of the programmable display on the monitor.

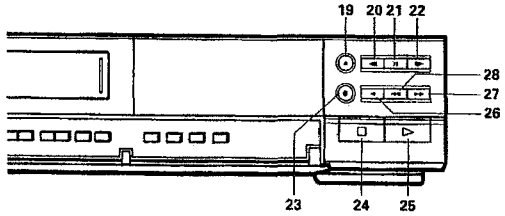
14 ALARM INDEX BUTTON
Press this button to cause the INDEX indicator to light, and set the VCR to the visual search mode (press F.FWD or REWIND during playback mode) in this state; the start of the alarm recorded can be located

15. ALARM RESET BUTTON
Press to clear POWER LOSS information. When this button is pressed when the Alarm Memory screen is being displayed, the alarm memory is cleared

16 COUNTER RESET BUTTON
Press to clear the digital counter to "00000"

17 REC/PLAY HOURS BUTTONS
▲(UP): Press to increase hours to the next higher value
▼(DOWN): Press to decrease hours to the next lower value. The tape speed will be indicated as part of the monitor display

18 TIMER BUTTON
Press after programming the TIMER for automatic TIMER recording. See page 11 for TIMER programming



19 EJECT BUTTON
Press to remove the cassette. The EJECT button will not operate in the RECORD mode

20 FIELD REVERSE BUTTON
Press to reverse the tape by one field in the STILL playback mode

21 STILL BUTTON
Press to momentarily stop tape motion in the play mode. The STILL function allows close inspection of individual scenes. See the description of STILL play back on page 17

22 FIELD ADVANCE BUTTON
Press to advance the tape one field in the STILL play back mode

23 RECORD BUTTON
Press to start recording

24 STOP BUTTON
Press to stop the tape. The STOP button must be pressed to end the RECORD and PLAY mode

25. PLAY BUTTON
Press to play recorded material in the forward direction. Pressing this during recording makes it possible to check recordings

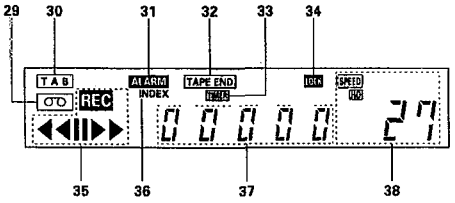
26 REVERSE PLAY BUTTON
Press to play recorded material at the 09 or L27 speed in the reverse direction during the PLAY mode

27 FAST FORWARD/VISUAL SEARCH BUTTON
Press to activate fast forward
Press this button during playback and a forward play back picture at high speed can be seen

28 REWIND/VISUAL SEARCH BUTTON
Press to start rewind.
Press this button during playback and a reverse playback picture at high speed can be seen

CONTROLS AND FUNCTIONS (Continued)

[DISPLAY]



29 TAPE-IN INDICATOR
Lights when a cassette is in the compartment

30 TAB INDICATOR
Lights when a cassette without its safety tab is loaded

31 ALARM INDICATOR
ALARM appears during alarm recording
ALARM flashes when alarm recording ends

32 TAPE END INDICATOR
Lights when the tape reaches the end during recording.
Note: "TAPE END" is not displayed when you have selected REW, RE REC in the "RECYCLE FUNCTIONS" menu in the alarm display or you have selected REWIND, STOP IF ALARM but an alarm recording has not been made

33 TIMER INDICATOR
This is lit during timer recording or TIMER stand-by mode
The indicator flashes in the following cases
- A cassette is not loaded
- A cassette without its safety tab is loaded
- The timer has not been programmed

34. LOCK INDICATOR
LOCK appears when the recorder is in the security lock mode.

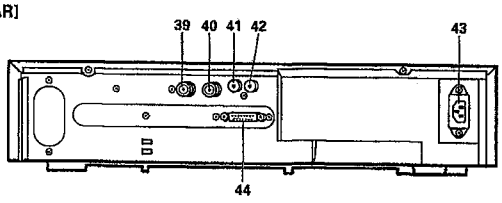
35. VCR MODE INDICATORS
- REC appears during recording
- ◀◀ appears during the rewind mode
- ▶▶ appears during the fast forward mode
- ◀◀ (or ▶▶) flashes during visual search
- ▶ appears during the playback mode
- ◀ appears during the reverse play mode
- ❚❚ appears when the STILL button is pressed during play mode and disappears when the STILL or PLAY button is pressed again.
- ◀❚❚ (or ❚❚▶) appears while the FIELD REV (or FIELD ADV) is held depressed in the still playback mode
  Note: Still playback is restored when the FIELD REV (or FIELD ADV) button is released

36 INDEX INDICATOR
INDEX appears when the ALARM INDEX button is pressed.
INDEX disappears when the ALARM INDEX button is pressed again
INDEX flashes during alarm indexing

37 DIGITAL COUNTER
Shows the tape counter. The counter does not count during non recorded sections of a tape

38 TAPE SPEED INDICATOR
Shows the tape speed

[REAR]



39 VIDEO IN
Receives video signal from a video camera or another VCR

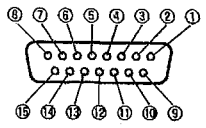
40 VIDEO OUT
For connection to monitor.

41. AUDIO IN
Accepts an audio signal from a camera, external sound equipment or another recorder (Line: –8 dBm, 50 Kohm, unbalanced).

42. AUDIO OUT
Provides an audio output for a monitor or another recorder (–10 dBm, 600 ohm, unbalanced)

43 AC INLET

44 EXTERNAL INTERFACE (15-PIN) JACK
Connect an alarm switch, door sensor, etc. using the 15-pin adapter provided



① ALARM IN
② ALARM OUT
③ ALARM REC RESET
④ TAPE END OUT
⑤ TAPE END RESET
⑥ —
⑦ —
⑧ —
⑨ CAMERA SW OUT
⑩ REC START IN
⑪ GND
⑫ —
⑬ —
⑭ —
⑮ GND

VIDEO CONNECTIONS

Use coaxial cables when connecting a camera and a monitor to this VCR

Note: Long cable runs to distant cameras may cause signal deterioration and/or sync discrepancies. If these problems occur, use video line amplifiers and/or cameras having phase adjustable line locked vertical sync

Video Input

In single camera systems, connect the camera to the Video IN BNC terminal on the VCR rear panel. Use of a 2:1 interlace camera is highly recommended; otherwise, the monitor will show vertical distortion of the TIME/DATE characters

In multiple camera systems, connect the switcher output to the Video IN BNC terminal Because multiple camera systems require synchronization, use of cameras having line-locked vertical sync or a genlocked master drive/sync source is highly recommended The use of vertical interval switchers is also recommended

Video Output

Connect the monitor to the Video OUT BNC terminal on the rear panel.

AUDIO CONNECTIONS

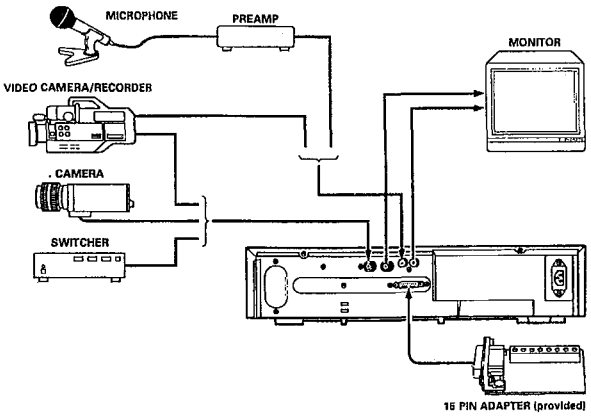
Note: Audio recording can be performed at the 09 and 27-hour recording speeds and audio playback at the 09 and 27 speeds

Audio In: Accepts an audio signal from a camera, external sound equipment, or another recorder (Line: –8 dBm, 50 kohm)

Audio Out: Provides an audio output for a monitor or another recorder (–10 dBm, 600 ohm, unbalanced)

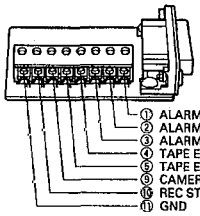
USING THE 15-PIN ADAPTER

Attach the wires of the alarm switch, door sensor or warning lamp to the 15 pin adapter using screws.
After connection, connect the adapter to the EXTERNAL INTERFACE jack on the rear of the VCR
See page 8 for details



* It is necessary to connect to suit your purpose

Pin Arrangement of 15-Pin Adapter



ALARM IN

You can connect an alarm switch with a resistance of 1 kohm or less or a door sensor Connect pin ① to pin ⑪ (ground) through the switches

Note: Do not apply a voltage to pin ① or ⑪

ALARM OUT

Approx 12V is applied to pin ② during an alarm recording

Notes:

- When you have selected "PULSE" in the "ALARM OUT" menu in the ALARM display, approx 12V pulses will be applied to the output after the alarm recording ends
- When you have selected "DURATION" in the "ALARM OUT" menu in the ALARM display, no voltage is applied after the alarm recording ends
- The output impedance is approx 100 ohm

TAPE END OUT

Approx 12V is applied to pin ④ when the tape reaches the end

Notes:

- This does not operate when you have selected "REW, RE-REC" in the "RECYCLE FUNCTIONS" menu in the ALARM display or you have selected "REWIND, STOP IF ALARM" and no alarm recording has been made
- The output impedance is approx 100 ohm

TAPE END RESET

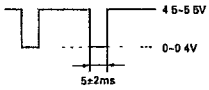
The TAPE END OUT function can be turned off when pin ⑤ is shorted to pin ⑪

Note: Do not apply a voltage to pin ⑤ or ⑪

CAMERA SW OUT

Pin ⑨ outputs the following signal each time a one-field image is recorded You can combine this with a video camera switcher which can be controlled externally

The output timing can be specified using the SELECTION MENU screen



REC START IN

Recording is started when 5-12V is applied to pin ⑩

ALARM REC RESET

When pin ③ is shorted to pin ⑪ during alarm recording, alarm recording is stopped and the original mode be restored

CASSETTE TAPES

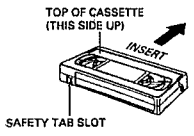
TAPE LIFE

Slower speed operation in time lapse recording applies stress to video tape Tapes should be inspected and, if necessary, discarded after the total number of complete tape passes (recording and playback) exceeds the following limits:

Tape Speed	Complete Tape Passes
09, 27	50

INSERTING A CASSETTE

Note: This is the first step in all VCR operations The VCR will not operate without a cassette in place To insert a cassette push the cassette through the cassette compartment door until the VCR mechanism pulls it into the compartment.
The tape in indicator turns on



Tape Insertion Position

REMOVING A CASSETTE

Before removing a cassette, rewind the tape completely.
To remove a cassette, press the EJECT button The cassette will come partially out of the compartment so you can pull it out

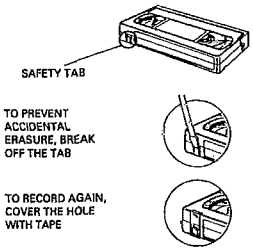
VIDEO CASSETTE SAFETY TAB

To prevent accidental erasure of recorded material, remove the safety tab from the lower left corner of the cassette

Recording is impossible when the safety tab is removed

Notes:

- The TAB indicator lights when a cassette without its safety tab is loaded
- To record again on a cassette that has its safety tab removed, cover the tab hole with tape. In the TIMER mode, the TIMER indicator will flash on and off if the cassette is inserted without its safety tab slot covered or intact



Video Cassette Safety Tab

TAPE LENGTH

The total recording time at each of the eleven tape speeds depends on the length of the tape used
The table below shows:

1. The total recording time that can be recorded at each tape speed mode on E90 and E180 tapes
2. The pictures per second at each speed
3. The speeds at which audio can also be recorded

Use the table to select the tape length which gives the best compromise between tape cost, total recording time, and elapsed time between pictures

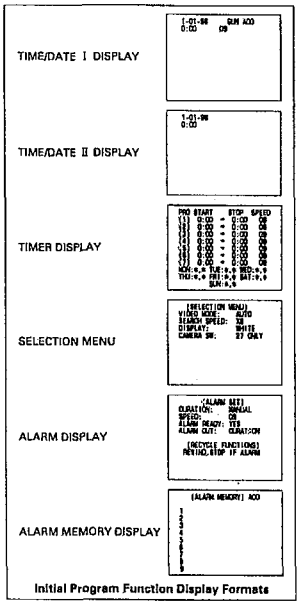
Tape Speed Mode		09	27	L27
Total Recording Hours	E90	4.5	13.5	—
	E180	9	27	—
Pictures/ Second	RECORD	50	16.7	—
	PLAYBACK	50	16.7	5.6
Audio	RECORD	Yes	Yes	—
	PLAYBACK	Yes	Yes	No

Note: The values in this table are approximate

SETUP

On-Screen displays are provided to aid setup of the programmable functions The six functions on the Program Menu appear individually on the monitor in this order.

1 TIME/DATE I
2 TIME/DATE II
3 TIMER
4 SELECTION MENU
5 ALARM
6 ALARM MEMORY



Initial Program Function Display Formats

Note: If the VCR is not turned on for about 720 hours after the built-in battery is fully charged (after the VCR is turned on for more than 48 hours), the TIME/DATE I and II displays will be cleared

ESTABLISHING THE PROGRAM MODE

The TIME/DATE display appears on the monitor screen when the power cord is first plugged in

SELECTING A FUNCTION TO BE PROGRAMMED

The program menu will always begin with the TIME/DATE I function, followed by the TIME/DATE II, TIMER, SELECTION MENU, ALARM, and then the ALARM MEMORY functions Although the program menu always follows this order, it is possible to skip any of the available functions during the selection process

To select the desired program function (and to move from one program function to the next), press the PROGRAM button repeatedly until the desired function display format appears on the monitor.
After the desired function has been selected, follow the corresponding procedure to set that function

SETTING THE PROGRAM FUNCTION(S)

The first step in each programming procedure is: "Press the START/STOP button". The system allows up to five minutes for any one function setting to be completed after the START/STOP button is pushed. If no change/setting is entered within the five minutes period, the unit will automatically exit the selected program function and return the TIME/DATE display to the monitor (If this happens, re-select the desired program function, and follow the programming procedure for that function)

The following procedures for setting VCR functions assume that the desired function has already been selected

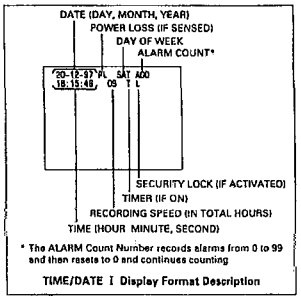
Notes:

1 During programming, holding the SET, UP, or DOWN button will move/change the displayed information at a rapid rate
2 The position of the TIME/DATE display on the monitor can be adjusted by using the H-POS and V-POS button on the front panel

SETUP (Continued)

SETTING THE TIME AND DATE

To set the TIME/DATE I display



* The ALARM Count Number records alarms from 0 to 99 and then resets to 0 and continues counting

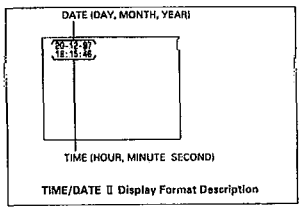
TIME/DATE I Display Format Description

1 Press the START/STOP button The day flashes on/off
2 Press the UP or DOWN button until the desired number appears on the monitor.
3 Press the SET button. The month flashes on/off.
4 Press the UP or DOWN button until the desired number appears on the monitor.
5 Press the SET button The year flashes on/off
6 Press the UP or DOWN button until the desired number appears on the monitor
7 Press the SET button The day of week flashes on/off
8 Press the UP or DOWN button until the desired day of week appears on the monitor.
9 Press the SET button The hour flashes on/off
10 Press the UP or DOWN button until the desired number appears on the monitor
11 Press the SET button The minutes flash on/off.
12 Press the UP or DOWN button until the desired number appears on the monitor.
13 Press the START/STOP button The seconds are reset to 00.
The TIME/DATE has been set

Notes:

- Perform the same procedure as when setting the time and date to make corrections after having set them. The minutes flash on/off when the START/STOP button is pressed
- To record time and date on the tape, display them on the monitor screen If they are not displayed on the monitor, they cannot be recorded on the tape

TIME/DATE II display



TIME/DATE II Display Format Description

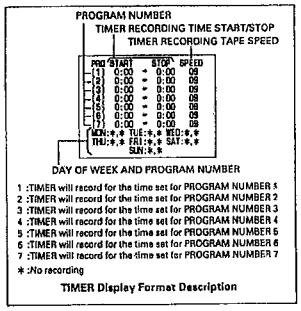
Select this function to display only the date and time on the monitor
Note: The day of the week cannot be set in this display Select the TIME/DATE I display to select the day of the week

SUMMER TIME FUNCTION

Press the FIELD ADV and UP buttons simultaneously in the stop mode; the hour display will be counted up by one
Press the FIELD ADV and DOWN buttons simultaneously to count the hour display down by one
You can change the hour display in one-hour steps without any limit by pressing the above buttons.
Note: Summer time cannot be set unless TIME/DATE I or II is displayed or during the timer recording standby mode

SETTING THE TIMER

To set the 24 Hour On/Off Timer function



1 :TIMER will record for the time set for PROGRAM NUMBER 1
2 :TIMER will record for the time set for PROGRAM NUMBER 2
3 :TIMER will record for the time set for PROGRAM NUMBER 3
4 :TIMER will record for the time set for PROGRAM NUMBER 4
5 :TIMER will record for the time set for PROGRAM NUMBER 5
6 :TIMER will record for the time set for PROGRAM NUMBER 6
7 :TIMER will record for the time set for PROGRAM NUMBER 7
* :No recording

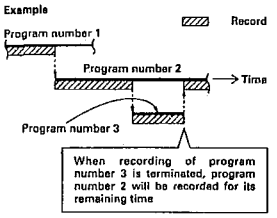
TIMER Display Format Description

1 Press the START/STOP button
The program number (1) flashes on/off
2 Press the SET button The start hours flash on/off
3 Press the UP or DOWN button until the desired number appears on the monitor
4 Press the SET button The start minutes flash on/off
5 Press the UP or DOWN button until the desired number appears on the monitor
6 Press the SET button The stop hours flash on/off
7 Repeat steps 3 through 5 to set the stop hours and minutes.
8 Press the SET button The timer recording speed flashes on/off
9 Press the UP or DOWN button until the desired number appears on the monitor
10 Press the SET button after setting the timer recording speed The program number of the next lower line flashes on/off
11 Repeat steps 2 through 9 to set the program to the other program numbers
12 Press the SET button after setting the program numbers (1) through (7)
The two program event locations of MON flash on/off
13 Press the SET button The first program event location of MON flashes.
14 Press the UP or DOWN button until the desired program number appears on the monitor
15 Press the SET button The other program event location of MON flashes on/off
16 Press the UP or DOWN button until the desired program number appears on the monitor
Notes:
- If you do not need to timer record two events a day, mark either event with an asterisk (*)
- If two asterisks are displayed, no timer recording is made on that day

17 After setting two program event locations of MON, press the SET button The two program event locations of the next day of the week flashes on/off.
18 Press the SET button The first program event location of the next day flashes
19 Repeat steps 12 through 16 to set the program event locations up to SUN
20 Press the START/STOP button when the TIMER has been set

Notes:
1 Programming the TIMER function does not activate it See TIMER recording, page 16.
2 To record the time and date press the PROGRAM button to display them.
3 When the preset START time is later than the STOP time, the recording will be made into the following day
4 When the START time and STOP time are the same, a recording will not be made
5 When the programs for timer recording overlap each other, recording will be switched to the program with the later recording start time

Example



6 When two programs have the same start time, the program number with the earlier stop time has priority

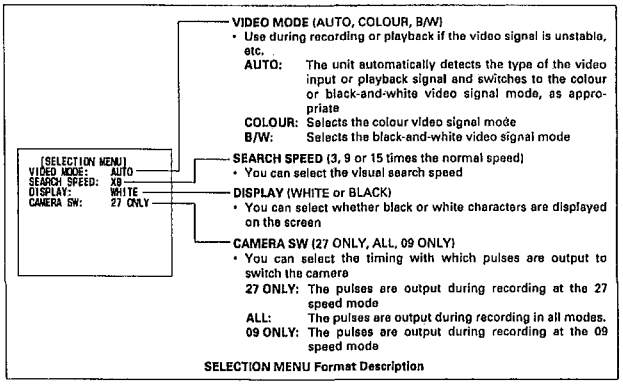
■ **To correct information**
1 Press the START/STOP button
2 Press the UP or DOWN button repeatedly until the item to be corrected (Program number or program event location of day of the week) flashes on/off
3 When the section to be corrected flashes on/off, press the SET button
- Press the SET button again so that only the digit to be corrected flashes on/off

4 Press the UP or DOWN button to correct the set information
5 After completing the correction, press the START/STOP button

SETUP (Continued)

SETTING THE VCR FUNCTIONS

The SELECTION MENU screen allows you to select the VCR operations and functions to match the applications

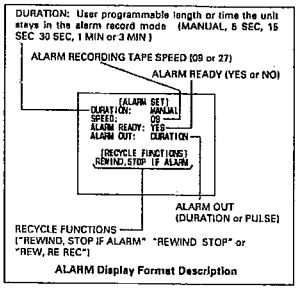


SELECTION MENU Format Description

1 Press the START/STOP button.
The VIDEO MODE option "AUTO" flashes on/off
2 Press the SET button repeatedly until the item the setting of which you want to change flashes
3 Press the UP or DOWN button to select the value or setting you want
4 After selecting, press the START/STOP button

SETTING THE ALARM

The ALARM function allows the user to set the recording duration, speed to be recorded and tape recycle for alarm recordings When a contact closure occurs at the ALARM IN input, the VCR automatically enters the RECORD mode at the pre programmed ALARM recording speed (See Alarm In, page 8 for a complete description of the ALARM sequence) The ALARM recording duration can last from 5 seconds to 3 minutes, or until the contact closure is reopened.
The ALARM recording speed can be pre programmed to 09 (real time) or 27
The checking signal is automatically recorded on the tape at the beginning of each ALARM recording Later, you can easily locate the start of each recording by using these signals when watching a recorded content See "ALARM INDEX SEARCH" on page 18 for details.
The TIME/DATE display is set as follows during ALARM display
—ALARM stars (*) will replace the colons (:).
—The recording speed will be changed to 09 or 27 which was selected at the "SPEED" setting in the ALARM display



ALARM Display Format Description

Notes:
- When the ALARM recording ends, the unit will return to the original record speed and restore the original record speed values to the TIME/DATE displays.
- Select 09 at the "SPEED" setting when the duration is within 30 seconds. If the 27 speed is selected, electronic "marks" are not recorded on the tape and alarm index search will not operate

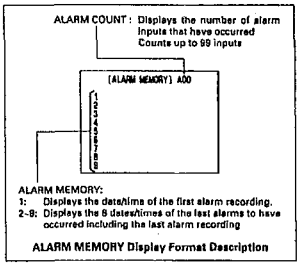
1 Press the START/STOP button The duration setting flashes on/off
2 Press the UP or DOWN button until the desired setting appears on the monitor (MANUAL, 5, 15, 30 SEC, 1, 3 MIN)
3 Press the SET button The record speed setting flashes on/off
4 Press the UP or DOWN button until the desired setting appears on the monitor (09, 27 HR)
5 Press the SET button. The alarm ready setting flashes on/off.
6 Press the UP or DOWN button to select the alarm ready function (YES or NO)
Select "YES" if you want to start alarm recording even in the normal record or stop mode
Select "NO" if you do not want alarm recording in the stop mode
7 Press the SET button The alarm out setting flashes on/off.
8 Press the UP or DOWN button to select the alarm out function. See "ALARM OUT" on page 8 for details. (DURATION or PULSE)
9 Press the SET button
The RECYCLE position flashes on/off
10 Press the UP or DOWN button to select the mode at the end of tape See "TAPE RECYCLE" on page 16 for details.
11 Press the START/STOP button.
Programming for the ALARM has been completed

Note: To record the time and date, press the PROGRAM button so they are displayed

SETUP (Continued)

ALARM MEMORY RECALL AND RESET

The VCR signals that an alarm has occurred by flashing the ALARM indicator. If a power loss has occurred, a "PL" will appear in the first line of the TIME/DATE I display.



ALARM MEMORY Display Format Description

To recall the ALARM display:

1 Press the PROGRAM button until the ALARM MEMORY display appears on the monitor.
2 Log the time/date information from the ALARM memory

After checking the alarm times and dates, press the ALARM RESET button to clear the ALARM memory

Notes:

- When the ALARM RESET button is pressed once, if "PL" is flashing, "PL" will disappear Press the button again to clear the ALARM memory.
- When "PL" is not flashing, press the ALARM RESET button once to clear the ALARM memory

OPERATION

TAPE RECORDING

CAUTION: Recording over existing recorded material will completely erase that material To prevent accidental recording over the end of a previous recording, advance the tape several seconds before beginning the next recording

1 Insert a video cassette; be sure the cassette safety tab is intact, or the tab slot is covered
2 Press the REC/PLAY HOURS button until the desired tape speed is observed on the tape speed indicator
3 Press the RECORD button to start recording
4 Press the STOP button to stop recording

Notes:

—The tape speed mode can be changed during recording
—AUDIO can be recorded at 09 and 27 tape speed modes
This VCR offers two special recording functions, TIMER recording and ALARM recording

REC CHECK

This function allows you to check whether the pictures are being recorded normally or not during recording
When the PLAY button is pressed during recording, the recorded picture is played back for several seconds Then recording will continue

TIMER RECORDING

This VCR can also record at any speed on TIMER command (turn on/off to record during any 24-hour time period) To program the TIMER function, refer to pages 11 and 12.
To operate the TIMER recording function, follow the tape recording procedure, step 1, then press the TIMER button to activate the programmed TIMER function

TAPE RECYCLE

The "RECYCLE FUNCTIONS" in the ALARM display determine the mode after recording at the end of tape
When the "REWIND, STOP IF ALARM" is selected:
—If no alarm has been received during the recorded period, the VCR automatically rewinds to the beginning of tape and continues recording.
—If an alarm has been received via the ALARM IN terminal during the recording period, the VCR automatically rewinds to the beginning of tape and then enters the STOP mode
When "REWIND, STOP" is selected:
—When the tape reaches the end during recording, the VCR automatically rewinds to the beginning of tape and enters the STOP mode
When "REW, RE-REC" is selected:
—When the tape reaches the end during recording, the VCR automatically rewinds to the beginning of tape and continues recording

Note: When "REWIND, STOP" or "REW, RE-REC" is selected, the VCR operates whether an alarm has occurred or not

Recycle	Alarms Present on Recorded Tape	Results
REWIND, STOP IF ALARM	YES	Rewinds tape, then stops Will not respond to alarm input.
	NO	Rewinds tape then continues to record.
REWIND, STOP	YES	Rewinds tape, then stops. Will not respond to alarm input.
	NO	Rewinds tape, then stops Will not respond to alarm input.
REW, RE-REC	YES	Rewinds tape then continues to record
	NO	Rewinds tape then continues to record.

OPERATION (Continued)

ALARM RECORDING

This VCR can automatically record at one of two speeds (09 or 27) on ALARM command
To program the ALARM function refer to page 14
The remote/contact switch must be connected to the VCR See page 9.
To operate the ALARM recording in the stop mode: follow the tape recording procedure, step 1, then select "YES" of the ALARM READY menu in the ALARM display

MASTER SYSTEM RESET

Press the two reset buttons simultaneously to provide a MASTER SYSTEM RESET Use to reset abnormal displays and operations The programmable features must be re programmed

PLAYBACK

1 Rewind the tape to the desired beginning point (Press the REWIND button, and observe the digital counter until the desired number appears) Press the stop button
2 Press the REC/PLAY HOURS button until the desired tape speed is observed on the tape speed indicator When L27 is displayed, the VCR will enter the slow playback mode.
3 Press the PLAY button to initiate forward playback
To select reverse playback, press the PLAY button and then press the REVERSE PLAY button Forward playback resumes when the PLAY button is pressed
Notes:
- When the REVERSE PLAY button is pressed in the forward playback mode to set the VCR to the reverse playback mode, the first several frame images may be distorted.
- When the REVERSE PLAY button is pressed during playback at the 27 hour speed, reverse play will be performed automatically at the L27 speed.
- The VCR will automatically enter the STOP mode if the reverse play is continued for approx 1 minute

4 Press the STOP button to stop playback

Notes:

—The tape speed mode can be changed during playback
—When a picture recorded in the 09 mode is played back in the 27 mode, it includes noise It is recommended that you play back pictures recorded in the 09 mode at modes higher than L27.
—When the tape reaches the end, the unit automatically rewinds to the beginning of the tape and then goes to the STOP mode.
—If the monitor display exhibits distortion in the upper part of the picture, adjust the horizontal hold control on the monitor.
—Adjust the SLOW TRACKING control to minimize noise when playing back at slow speed (L27) or in the FIELD ADVANCE/REVERSE mode

STILL PLAYBACK

When the STILL button is pressed during playback, a still picture can be seen To start again press STILL or PLAY button and the VCR will continue playback

Notes:

- When still playback continues for more than 5 minutes, the AUTO-PROTECT circuit operates and the VCR will enter the STOP mode automatically.
- If the picture shakes up and down during still playback, adjust the V LOCK control

V.LOCK ADJUST

If the picture shakes up and down during still playback, adjust the picture by the following procedure

1 Play back a tape, recorded in the 09 mode, in the still playback mode
- With some TVs, if the V.LOCK control is adjusted when playing a tape recorded in modes other than 09, shaking of the still picture may not stop.

2 Adjust the V LOCK control so the shaking of the picture stops

Note: Shaking of the picture may not be stopped completely depending on the TV used

PLAYBACK IN THE FIELD ADVANCE/REVERSE MODES

When you press the FIELD ADVANCE or FIELD REVERSE button during still playback mode, one field at a time can be seen.
Operates only after STILL button has been pressed

Notes:

- An AUTO PROTECT circuit automatically returns the unit to the STOP mode if the STILL or PLAY button is not pressed again or if FIELD ADVANCE or FIELD REVERSE button is not pressed in any five minute period.
- When the FIELD REVERSE button is pressed in the still playback mode to set the VCR to the field reverse mode, the first several frame images may be distorted

VISUAL SEARCH (High Speed Scan)

Note: The visual search function allows the recorded material to be reviewed at 3, 9 or 15 times the 09 hour speed mode

1 Press the PLAY button.
2 Press the SEARCH (F.FWD) button to select the VISUAL SEARCH FORWARD mode, or press the SEARCH (REWIND) button to select the VISUAL SEARCH REVERSE mode
3 Press the PLAY button again to resume normal playback.

Notes:

- The visual search speed can be changed using the SELECTION MENU screen
- The playback picture will have some noise in the visual search mode This noise may not be fixed In the picture, but may flow from top to bottom (or from bottom to top)

ALARM INDEX SEARCH

The alarm index search method causes electronic "marks" to be recorded on the tape at each point when the ALARM recording begins
Later, the VCR can find these "marks" automatically, making it easy to find the beginning of each alarm for playback.
These check points are permanent until the tape is erased A check mark is recorded automatically each time the VCR starts ALARM recording

1 Press the PLAY button to start playback
2 Press the ALARM INDEX button
3 Press the REW or F.FWD button The recorder enters VISUAL SEARCH mode
4 When the VCR finds a mark, it enters normal playback mode.
5 Press REW or F FWD button again to find next "marked" recording The recorder advances tape to the next marked position
6 Press the ALARM INDEX button again to release alarm index search

Notes:

1 Be careful as no alarm input can be detected for 5 seconds immediately after the visual search mode is entered by pressing the REW or F FWD button during the alarm index search mode
2 When tapes recorded by other VCRs are played in the alarm index search mode, the VCR may enter the play mode in a meaningless position
3 When you have selected "MANUAL" at the DURATION setting in the ALARM display, and the duration of an alarm recording is shorter than the values shown below, "marks" may not be detected

SPEED	
09	.5 seconds
27	60 seconds

TO SECURE THE VCR

This feature restricts unauthorized use, tampering, or accidental changes in the operation of the VCR
The security feature does not operate during programming Simultaneously press the SET and DOWN buttons in the program set area of the front panel. The security message "L" appears in the TIME/DATE I display and the LOCK indicator lights in the VCR's display
To release the security feature, press the SET and DOWN buttons simultaneously

PROBLEM GUIDE

If you are having this kind of trouble:	Check these things:
▪ No power (No indicators ON)	▫ Check to see if unit is plugged in (Power at supply outlet?)
▪ Recorder fails to respond to user command/ operation	▫ Perform MASTER SYSTEM RESET See page 17.
▪ No monitor picture	▫ Carefully check monitor/VCR/camera connectors.
▪ Poor picture during monitor viewing (in the RECORD or STOP mode)	▫ Check monitor/camera adjustments
▪ Black streaks on picture during 09 or 27 mode playback	▫ Adjust the TRACKING control (may need to be returned to center position if previously adjusted). The TRACKING control is only active for the 09 or 27 mode ▫ Replace cassette. ▫ Clean video heads.
▪ Recording or playback cannot be done	▫ Remove cassette and reinsert ▫ Check the LOCK indicator on the front panel If the indicator is lit, press both SET and DOWN buttons simultaneously to release the security lock.
▪ RECORD functions not operate	▫ Check the TAB indicator is lit ▫ See Note on page 9.
▪ PLAY function not operate	▫ Be sure there is a cassette in the unit.
▪ TIME/DATE information not displayed on the MONITOR	▫ Press the PROGRAM button. ▫ Perform MASTER SYSTEM RESET See page 17.
▪ TIMER recording was not done	▫ TIMER may not have been set properly. ▫ Check for SAFETY TAB of cassette ▫ TIME and DATE are not correct ▫ Cassette tape length may have been exceeded. Multiple ALARMs used up tape.
▪ REWIND or FAST FORWARD does not operate	▫ Tape may already be rewound or be at the end of tape.
▪ Unable to SELECT/CHANGE program feature	▫ Check the LOCK indicator on the front panel. If the indicator is lit, press both SET and DOWN buttons simultaneously to release the security lock.
▪ The VCR does not operate if an operation button is pressed	▫ Press the EJECT button to remove the cassette, then restart VCR operations

CHAPTER 2 DISASSEMBLY

1.CASES AND CIRCUIT BOARDS SECTION

1.BEFORE STARTING DISASSEMBLY

[Removal Procedure]
Dismantle each component in numerical order [(A),(B),(C),...].

[Reinstallation Procedure]
Reinstall eachcomponent in the reverse order to removal when otherwise not specified.

Identifications and Locations of Circuit Boards

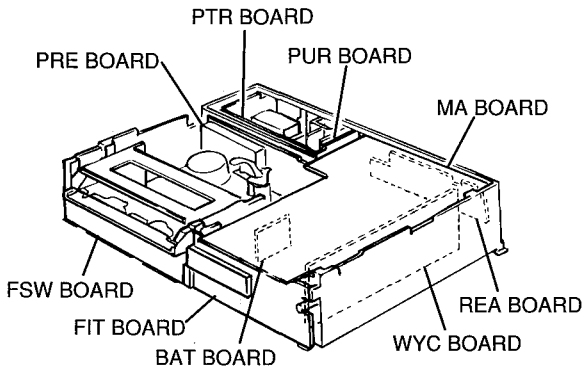


Fig. 2-1 Top View

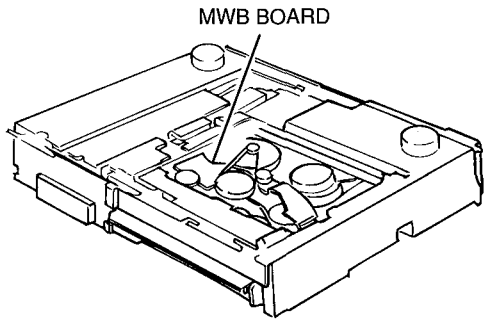

Fig. 2-2 Bottom View

2.DISASSEMBLY PROCEDURE

[How to use the parts hierarchy chart]
1)Locate the part to be replaced.
2)Check the parts in the ranks above the part to be replaced and start dismantling.
3)Replace the difective part and reinstall the parts in the reverse order to that show in the parts hierachry chart.

[Cautions]
1)Dismantle parts in the eject state.
2)Parts can be dismantled in a different way from that shwn here.

Parts Heirarchy Chart

Parts to Removed (First Block)	Item	Parts to Removed (Second Block)	Item	Parts to Removed (Third Block)	Item
Top Cover	2-3	PRE Board PTR Board PUR Board	2-10	AF Mechanism	2-11
Bottom Cover	2-4	MWB Board	2-12

★ 1: When reinstalling the mode gear, be sure to match its phase (position).
(See the AF mechanism edition.)

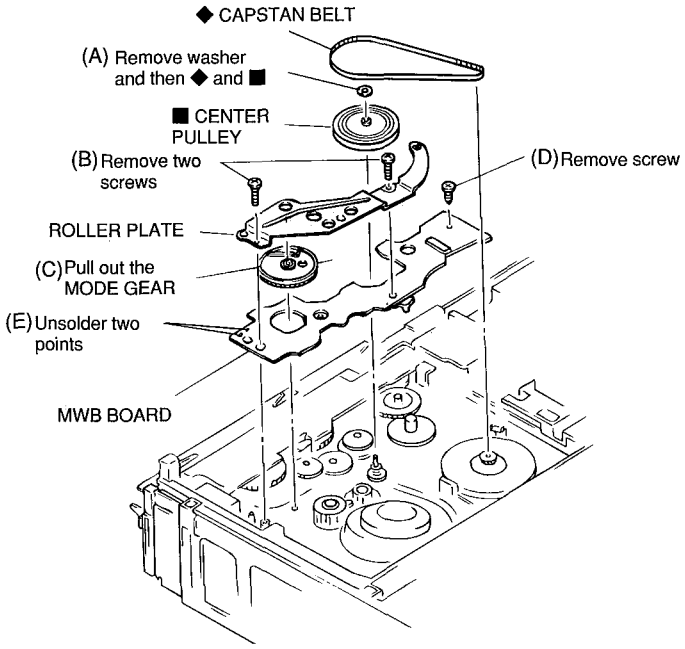

Fig. 2-12

2.MECHANISM SECTION

The AF mechanism is used as the mechanical section of this VCR. Refer to the following manual when dismantling the mechanical section.

◆ AF Mechanism edition (No.4412E) "CHAPTER 1 DISASSEMBLY"

1.PHOTOS OF MECHANISM (Refer to these photos when reinstalling)

1) Top view of Mechanism

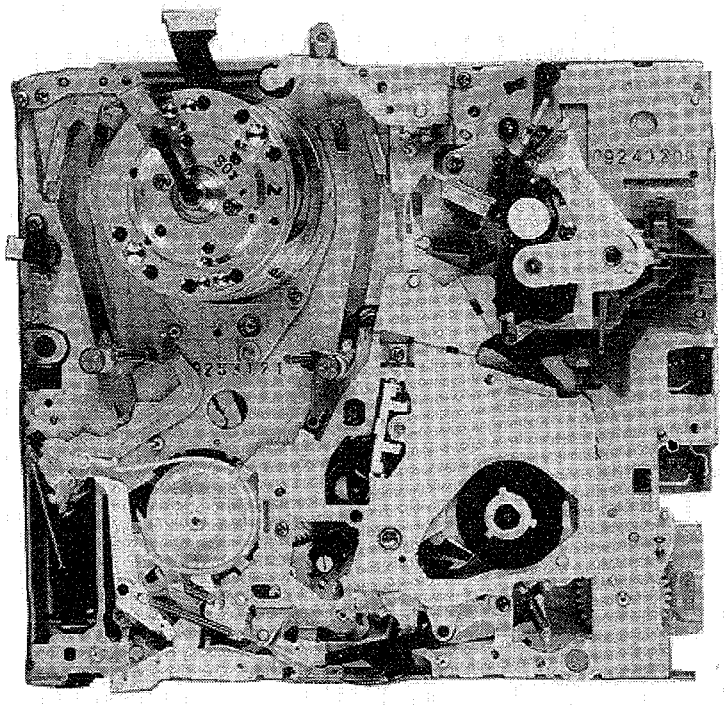

Fig. 2-13

2) Bottom view of Mechanism

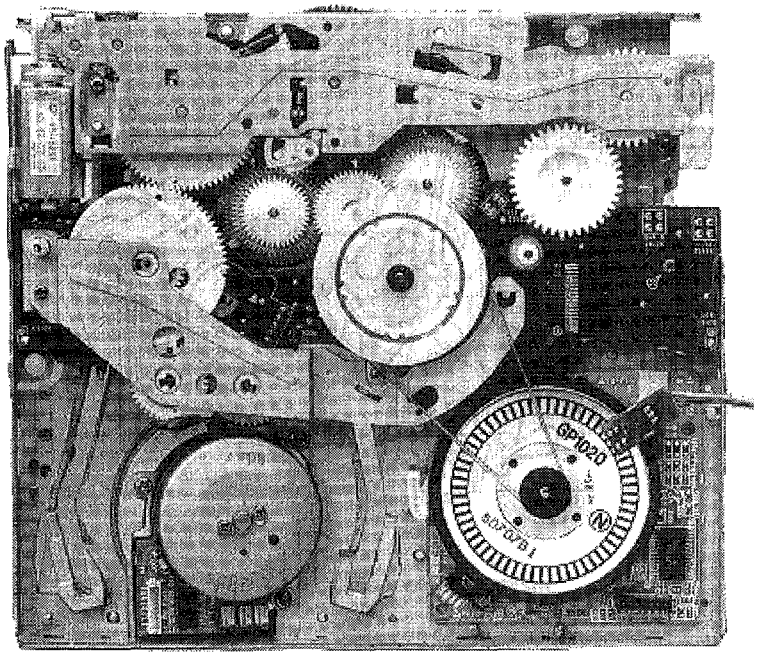

Fig. 2-14

MEMO

CHAPTER 4 ELECTRIC CIRCUIT ADJUSTMENT

1.Circuit Board Locations and Adjustment / Service Position

The electrical adjustments other than the 8.42MHz VCO adjustment can be done when only the top cover is removed.

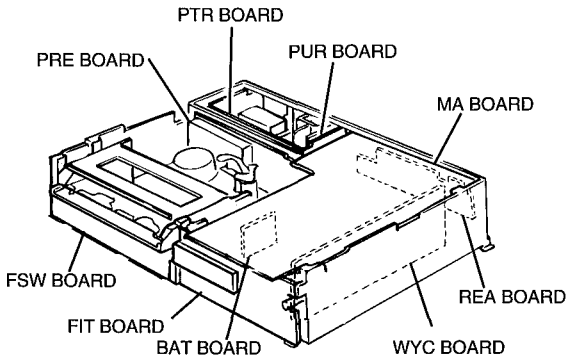

Fig. 4-1

2.Test Equipment and Tapes Necessary for Adjustments

1) Dual-trace oscilloscope
2) Colour bar generator
3) Colour monitor TV (with A/V jacks)
4) Digital voltmeter (DVM)
5) VTVM
6) Alignment tape (30HMPE-3)
7) Blank tape

3.Before Starting Adjustment

1)The following conditions apply when otherwise not specified.
- Oscilloscipe probe → 10:1
- Oscilloscope synchronisation → Internal sync
- Ground of test equipment → TP1527 (MA board)

2)When performing more than one adjustment, follow the order of times shown here.

4.Preset Position of Switches and Controls During Adjustment

1)Positions of controls
- SHARPNESS CONTROL : Optimum position
- TRACKING : Center
- SLOW TRACKING : Center
- V.LOCK : Optimum position

2)OSD Setting [SELECTION MENU]
- VIDEO MODE : AUTO
- SEARCH SPEED : × 9
- DISPLAY : WHITE
- CAMERA SW : 27 Only

※:The OSD positions are set at the factory above.

5.Procedure to Reset (Initialize) the VCR

This VCR can be reset to the state set at the factory by the following procedure.

Table. 4-1

	IC	Procedure	Object to be reset
1	System control μ P(IC1901)	Press [S1303]	System control μ P
2	Main μ P (IC1701)	Press [S1303] and [S1311] simultaneously	· Timer · OSD settings
3	EEP ROM (IC1702)	Press [REV.PLAY] [SET] and [ALARM RESET] simultaneously	· Trouble memory · Cylinder use time (◆) · Total use time

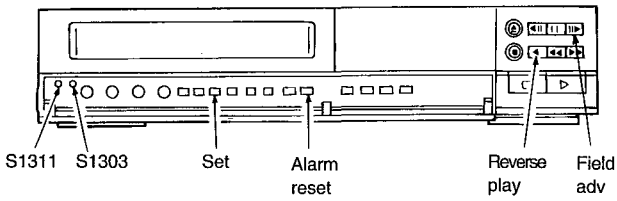

Fig. 4-2

◆:Cylinder time of use
This VCR has function which displays the accumulated time of cylinder rotation as a reference for cylinder replacement. Be careful as all data including the accumulated time is cleared when the EEP ROM is initialized.
The following shows the display of the cylinder time of use and how to reset it without resetting other values.

- Display method (the total use time is also displayed)
  Press [F.ADV] and [SET] simultaously (displayed in the OSD).
- Resetting the time of use only
  Short IC1701 (Main μ P) pin 16 to ground.

6.Connecting Test Equipment

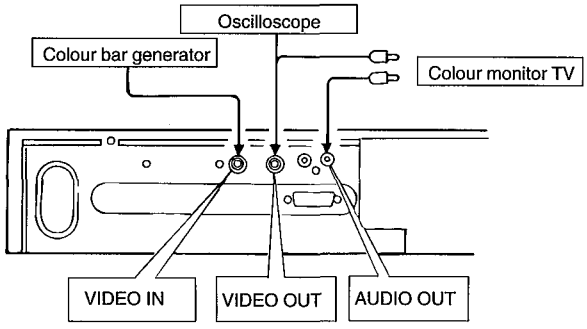

Fig. 4-3

7.Location of Components on Circuit Boards

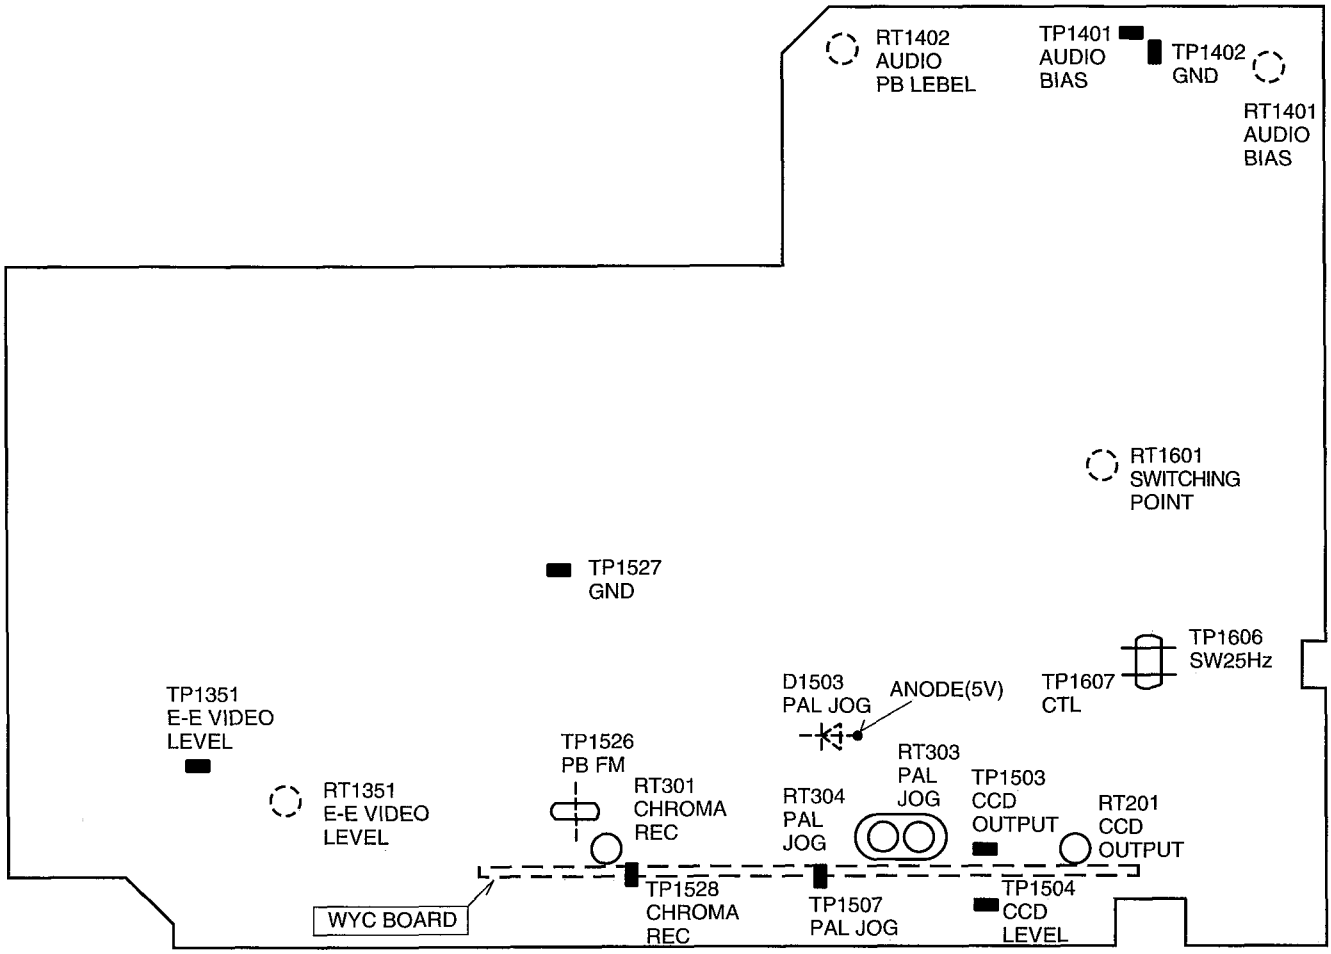

Fig. 4-4 Main (MA) Circuit Board [Side B]

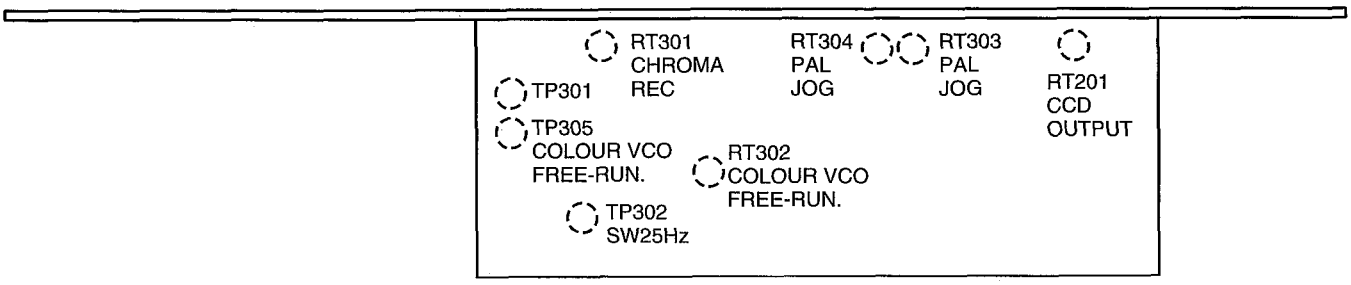

Fig. 4-5 Y/Chroma (WYC) Circuit Board [Side B]

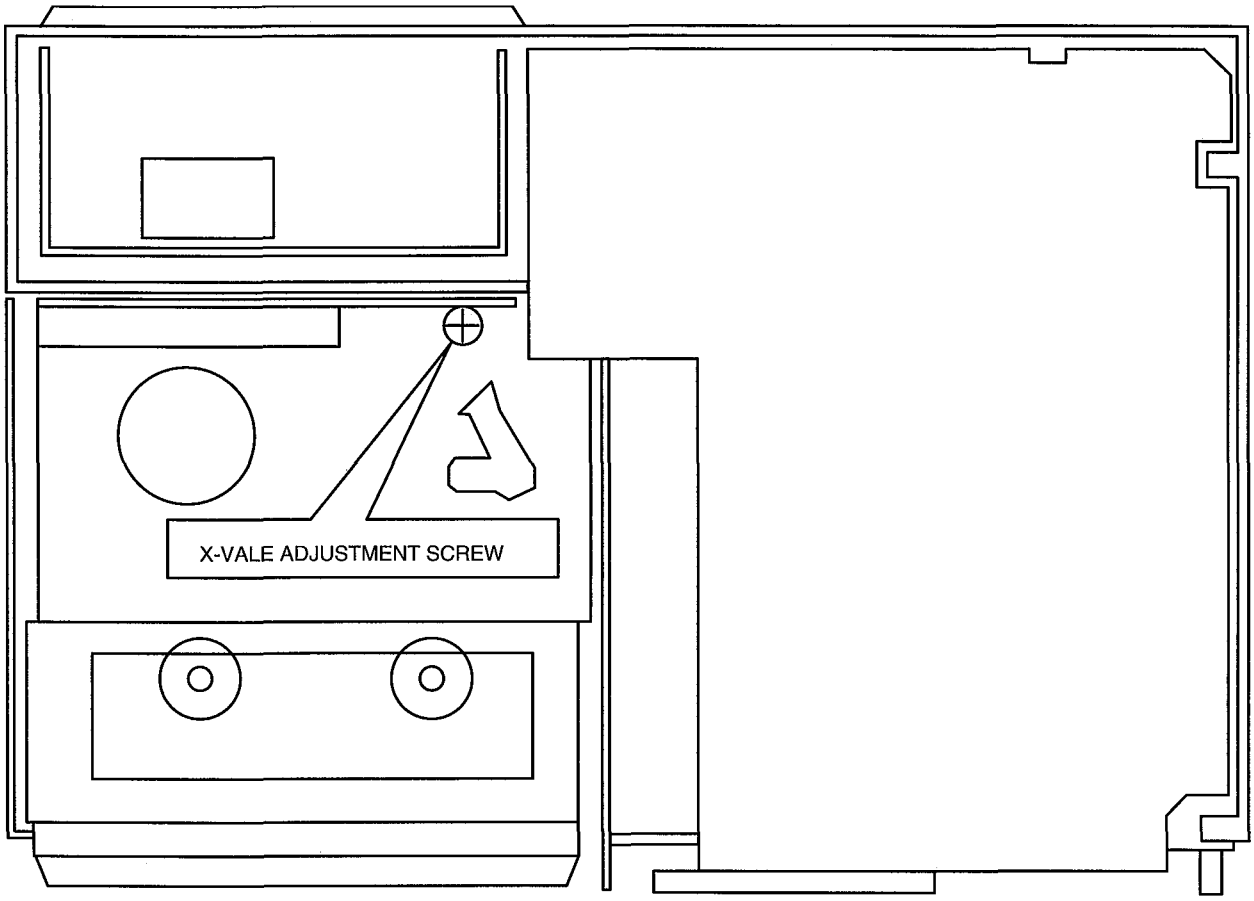

Fig. 4-6 Top View of Unit

8.Adjustment Procedure

8-1. Servo Circuit Adjustments

(1) Head switching point adjustment (See Fig.4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To set the video head switching point during play to approximately the centre where the CH-1 and CH-2 envelopes overlap each other.

Fault:
- The vertical sync signal is degraded and vertical jitter occurs.
- Switching noise appears across the bottom of the screen.

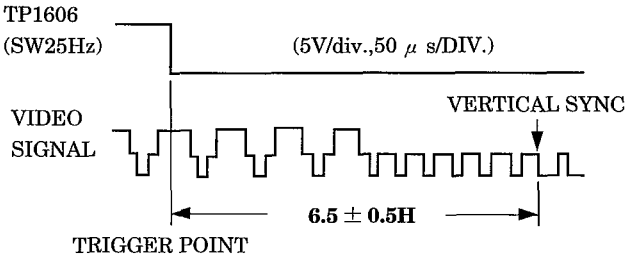
Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Oscilloscope	· CH-1:Video Out · CH-2: TP1606 [MA board]	· Play alignment tape (09 mode) · Tracking volume: Centre	· RT1601 [MA board]
· Alignment tape			

● Adjustment procedure

1)Vertical sync signal: Set to 6.5 ± 0.5H from the trailing edge (trigger position) of the SW25Hz pulse.

<<Setting of oscilloscope>>
- Trigger with CH-2.
- Set the sync slope to "-".

● Waveforms



(2) X-Value adjustment (See Fig.4-6)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To obtain compatibility with other VCRs.

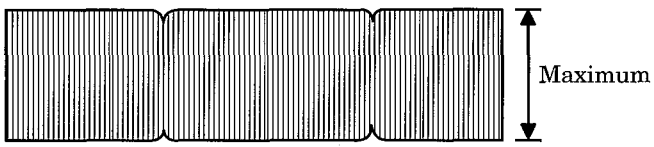
Fault:
Noise occurs when tape recorded by another VCR is played back.

Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Oscilloscope	· CH-1: TP1526 [MA board] · CH-2: TP1606 [MA board]	· Play alignment tape (09 mode) · Tracking volume: Centre	· X-value adjustment screw
· Alignment tape			

● Adjustment procedure

1) Turn the X-value adjustment screw to maximize the FM output.

● Waveforms



(100mV/div.,20 μ s/div.)

8-2. Video Circuit Adjustments

(1) E-E video level adjustment (See Fig.4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To set the video output level in the E-E mode to the specified value.

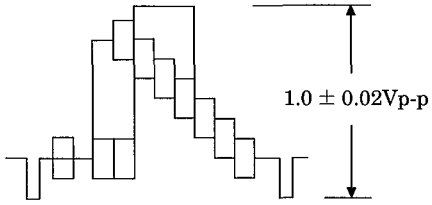
Fault:
The correct tint and brightness cannot be obtained.

Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Oscilloscope	· TP1351 [MA board]	· E-E mode. · Input the colour bar signal.	· RT1351 [MA board]
· Colour bar generator	· VIDEO IN		

● Adjustment procedure

1)Adjust RT1351 so the output level is 1.0Å}0.02Vp-p.

● Waveforms



(200mV/div.,20 μ s/div.)

(2) Colour VCO free-running adjustment (See Fig.4-5)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To set the colour VCO frequency to the specified value.

Fault:
No colour.

Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Frequency counter	· TP305 [WYC board]	·Set the no-signal input state in the eject mode.	· RT302 [WYC board]

● Adjustment procedure

1) Short-circuit TP301 and TP311(GND).
2) Short-circuit TP302 and TP311(GND).
3) Adjust RT302 so the frequency counter reads 627±5kHz.

(3) CCD level adjustment (Fig. 4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To align the Y level of the main playback signal and that of the 1H delayed signal.

Fault:
· The S/N deteriorates.
· Dropout cannot be compensated.

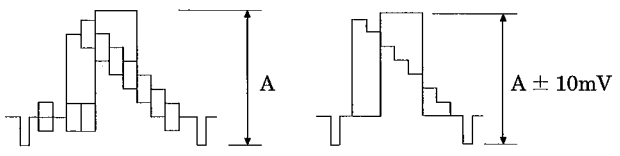
Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Oscilloscope	· TP1503 [MA board] · TP1504 [MA board]	· Record colour bar signal and play it back. (09 mode)	· RT201 [WYC board]
· Alignment tape			

● Adjustment procedure

1) Adjust RT201 so the waveform level at TP1504 becomes ± 10mV of that at TP1503(section A).

● Waveforms

(200mV/div ,50ms/div.)



(4) Chroma recording level adjustment (See Fig. 4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To set the chroma recording level to the optimum value.

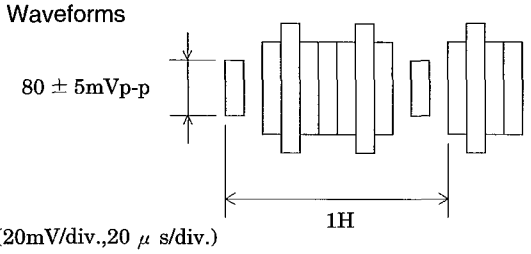
Fault:
Colour becomes defective.

Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Oscilloscope	· TP1528 [MA board]	· REC mode. (09 mode) · Input the colour bar signal.	· RT301 [WYC board]
· Colour bar generator	· VIDEO IN		
· Blank tape			

● Adjustment procedure

1) Adjust RT301 so the chroma burst level is 80 ± 5mVp-p.

● Waveforms



(20mV/div.,20 μ s/div.)

(5) PAL Jog adjustment (See Fig. 4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete

Purpose:
To set the output signal to the specified phase position.

Fault:
Colour becomes defective.

Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· Vectorscope	· Video out	· Play alignment tape. (09 mode/1kHz section)	· RT1402 [MA board]
	· TP1507 [MA board] · D1503(anode)[MA board] · TP1527 [MA board]		

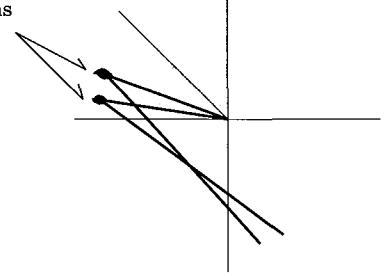
● Adjustment procedure

1) Connect a vectorscope to video out.(Set the vectorscope to the +V mode.)
2) Align the two burstphases.
3) Short-circuit TP1507 and D1503(anode: 5V).
4) Adjust RT303 to align the phases of the two vectors in the YL section.
5) Release the short-circuit.
6) Short-circuit TP1507 and TP1527(GND).
7) Adjust RT304 to align the phases of the two vectors in the YL section.
8) Release the short-circuit.
9) Repeat steps 3) and 4).

● Waveforms

[Step 2]
Align the two burst phases

[Steps 4 and 7]
Align the phases of the two YL sections



8-3.Audio Circuit Adjustment

(1) Audio bias level adjustment (See Fig. 4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete			
Purpose: To set the recording bias level to the optimum value.		Fault: · High-frequency response deteriorates. · Sound tends to be distorted.	
Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· VTVM	· TP1401 [MA board] · TP1402 [MA board]	· No-signal record mode. (09 mode)	· RT1401 [MA board]
· Blank tape			
● Adjustment procedure 1) Adjust RT1401 so the VTVM reads 2.7 ± 0.1mV.			

(2) Audio playback level adjustment (See Fig. 4-4)

● Purpose of Adjustment and Fault Occurring if Incomplete			
Purpose: To set the audio playback level to the specified value.		Fault: The correct volume cannot be obtained.	
Test Equipment/Jigs	Test Equipment Connection Point	State of VCR	Adjustment Point
· VTVM	· Audio out	· Play alignment tape. (03 mode/1kHz section)	· RT1402 [MA board]
· Alignment tape			
● Adjustment procedure 1) Adjust RT1402 so the VTVM reads -8.0 ± 0.5dBs.			

9.Trouble Mode Function

This VCR has a function which displays mechanism malfunctions, etc. When the system control μ P (IC1901) detects information on a defect in the mechanism control system, it transfers bit data to the main μ P (IC1701). The trouble memory data written to the EEP ROM can also be displayed on the OSD screen.

9-1. Trouble Mode

Table. 4-2 Details of Error

	Name of error	Major cause
1	Cylinder Lock	SW30Hz is not normal.
2	Mecha.Lock 1	CFG is not detected for more than 400ms during unloading.
3	Mecha.Lock 2 ~ 10	The object position cannot be detected within the specified time during operation.
4	Reel.Lock 1	The specified CFG is not input when reel lock has occurred.
5	Reel.Lock 2	The specified CFG is input when reel lock has occurred

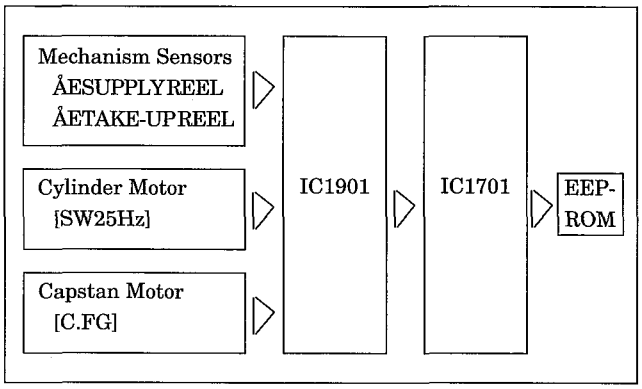


Fig. 4-8 Malfunction Detection

9-2. Trouble Memory Data Display
(1)Display method

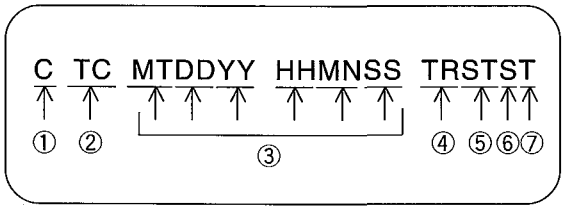

Fig. 4-9 OSD Screen

- Procedure to display the trouble memory
  Press **STOP** , **DOWN** and **H.POS** simultaneously.
- Procedure to erase the trouble memory
  Refer to "5.PROCEDURE TO RESET THE VCR" in this chapter.

(2)Datails of display (See Fig.4-9)

1. C: Number of times

Table. 4-3

Display	Details
1	First malfunction
0	Second malfunction

CAUTION: When malfunctions occurr 10 times or more, the first and the last 8th malfunctions are displayed.

2. T C: Total number of times

3.Data when malfunction occurred
→ M T: Month
→ D D: Day
→ Y Y: Year
→ H H: Hour
→ M N: Minute
→ S S: Second

4. T R: Trouble data

Table. 4-4

CHAPTER 7 SCHEMATIC AND CIRCUIT BOARD DIAGRAMS

Applied Models: VT-L1500E

Cautions when using schematic diagrams

Caution for safety

The parts marked ⚠ are critical for safety. Be sure to use the specified parts to ensure safety when replacing them.

1. Values in schematic diagrams

The values, dielectric strength (power capacitance) and tolerances of the resistors (excluding variable resistors) and capacitors are indicated in the schematic diagrams using abbreviations.

〔Resistors〕

Item	Indication
Value	No indication ····· Ω K ····· k Ω M ····· M Ω
Tolerance	No indication ····· ± 5% (All tolerances other than ± 5% are indicated in the schematic diagrams)
Power capacitance	No indication ····· 1/8W (1/16W for leadless resistors without indication) All apacitances other than the above are indicated in the schematic diagrams.

〔Capacitors〕

Item	Indication
Value	No indication ····· μ F P ····· pF
Dielectric strength	No indication ····· 50V (All dielectric strengths other than 50V are indicated in the schematic diagrams.)

〔Coils〕

Item	Indication
Value	μ ····· μ H m ····· mH

2. Markings in schematic diagrams

1) Parts marked " ■ " with circuit numbers in the schematic diagrams are discrete parts.
2) Parts marked " ● " with circuit numbers in the schematic diagrams are leadless parts.

Cautions when using circuit board diagrams

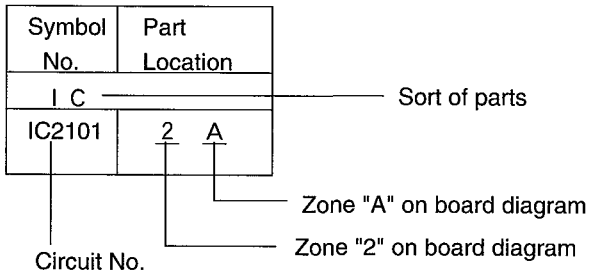
1. Identifications of sides A/B in circuit board diagrams

1) Board having a pattern on one side and parts on both sides.
   Side A: Shows discrete parts, viewed from the pattern side.
   Side B: Shows leadless parts, viewed from the pattern side.
2) Board having patterns on both sides and parts on both sides.
   Side A: Shows parts and patterns which can be seen when the case is opened.
   Side B: Shows parts and the pattern on the back of side A.

2. Table for indexing locations of parts

This table shows locations of each part on the circuit board diagrams. The locations are indicated using the guide scales on the external lines of diagrams.

1) In case of one-layer board



2) In case of side A/B indication board

MA CIRCUIT BOARD [SIDE A]

Caution : Read circuit numbers of components on the MA board by adding 1,000 to them.

Example : The component indicated as R901 on the diagram is shown as R1901 in the parts list.
Take great care when replacing components.

MA CIRCUIT BOARD [SIDE B]

Caution : Read circuit numbers of components on the MA board by adding 1,000 to them.

Example : The component indicated as R901 on the diagram is shown as R1901 in the parts list.
Take great care when replacing components.

CHAPTER 8 MICROPROCESSOR PIN FUNCTION TABLE/ BLOCK DIAGRAMS

1. Microprocessor (μ P) Pin Function Tables

1-1. SUB- μ P (IC1201) Pin Functions

Pin No.	I/O	Active Level	Abbreviation	Function
1	-	-	SW1	Grounded.
2	-	-	SW2	
3	-	-	SW3	
4	-	-	SW4	
5	-	-	-	Not used.
6	I	Pulse	DATA(M-CG/SUB)	Common communications lines between the MAIN- μ P and SUB- μ P character generator; data is communicated synchronized with the clock signal.
8	I	Pulse	CLK(M-CG/SUB)	
7	-	-	VSS	Grounded.
9	I	Hi	STB(M-SUB)	Strobe signal from the MAIN- μ P.
10	I	Hi	KEY 1	Key inputs.
11	I	Hi	KEY 2	
12	I	Hi	KEY 3	
13	I	Hi	KEY 4	
14	I	-	Vdd	5V power input.
15	O	Pulse	SEGMENT (a)	FL display segment control outputs. Synchronized with the grid control outputs at pins 29-37.
16	O	Pulse	SEGMENT (b)	
17	O	Pulse	SEGMENT (c)	
18	O	Pulse	SEGMENT (d)	
19	O	Pulse	SEGMENT (e)	
20	O	Pulse	SEGMENT (f)	
21	O	Pulse	SEGMENT (g)	
22	O	Pulse	SEGMENT (h)	
23	O	Pulse	SEGMENT (i)	
24	-	-	-	Not used.
25	-	-	-	
26	-	-	-	
27	I	-	VEE	-30V pull-down power input for the FL display.
28	-	-	-	Not used.
29	O	Pulse	GRID (9)	FL display grid control outputs. Synchronized with the segment control outputs at pins 15-23.
30	O	Pulse	GRID (8)	
31	O	Pulse	GRID (7)	
32	O	Pulse	GRID (6)	
33	O	Pulse	GRID (5)	
34	O	Pulse	GRID (4)	
35	O	Pulse	GRID (3)	
36	O	Pulse	GRID (2)	
37	O	Pulse	GRID (1)	
38	I	-	Vdd	5V power input.
39	-	-	-	Not used.
40	-	-	-	
41	-	-	-	
42	-	-	-	
43	-	-	VSS	Grounded.
44	I	Pulse	OSC	Oscillator input.

1-2. MAIN- μ P (IC1701) Pin Functions

Pin No.	I/O	Active Level	Abbreviation	Function
1	O	Pulse	STB(M-SUB)	Outputs the strobe signal to the SUB- μ P.
2	O	Pulse	DATA(M-CG/SUB)	Common communications lines between the MAIN- μ P and character generator/SUB- μ P; data is communicated synchronized with the clock signal.
3	O	Pulse	CLK(M-CG/SUB)	
4	O	Pulse	STB(M-CG)	Outputs the strobe signal to the character generator.
5	I	Pulse	BUSY-OSD	BUSY signal input from character generator.
6	I	Pulse	DATA(S-M)	Common communications lines between the system control μ P and MAIN- μ P; date is communicated synchronized with the clock signal.
7	O	Pulse	DATA(M-S)	
8	O	Pulse	CLK(M-S)	
9	O	Pulse	SOFT RUN	PWM output to control the voltage applied to the capstan during soft-landing.
10	O	-	-	Not used.
11	O	Pulse	45Hz	Outputs a reference signal to control the capstan phase in the 27 mode.
12	I/O	Hi/Lo	CLR/BW	"Lo" is output when B/W is specified as the VIDEO MODE option, "Hi" is output when COLOUR is specified and a signal is input when AUTO is specified.
13	I	Hi	-	Mode selection.
14	I	Hi	-	Mode selection.
15	O	-	-	Not used.
16	I	Lo	HEAD RESET	When "Lo" is input, the MAIN- μ P resets the cylinder time of use.
17	-	-	GND	Grounded.
18	O	Hi	CS SYS	Chip select signal between the MAIN- μ P and SYS.CON- μ P.
19	O	-	-	Not used.
20	O	-	-	Not used.
21	-	-	-	Not used.
22	O	Pulse	DATA(M-ROM)	Communications lines between the MAIN- μ P and EEPROM; data is communicated synchronized with the clock signal.
60	I	Pulse	DATA(ROM-M)	
61	O	Pulse	CLK(M-ROM)	
23	-	-	-	Not used.
24	O	Hi	BLK/WHT	OSD character colour control output. (Hi: Black, Lo: White)
25	O	Hi	RESET	"Hi" output resets the SYS.CON- μ P.
26	I	Lo	ALARM IN	Alarm recording start input.
27	O	-	-	Not used.
28	I	Lo	ALARM REC RST	When "Lo" is input, ALARM REC is stopped.
29	I	Lo	TAPE END RESET	When "Lo" is input, TAPE END OUT is stopped.
30	I	Lo	REC START IN	When "Lo" is input, recording is started.
31	O	-	-	Not used.
32	-	-	VSS	Grounded.
33	O	-	-	Not used.
34	O	-	-	Not used.
35	O	Hi	ALARM OUT	Outputs "Hi" during alarm recording. Outputs pulses after alarm recording is ended.
36	O	Hi	TAPE END OUT	Outputs "Hi" when the tape reaches its end during recording.
37	-	-	-	Not used.
38	-	-	-	Not used.
39	-	-	-	Not used.
40	-	-	-	Not used.
41	O	Pulse	CAM SW OUT	Outputs the timing pulse to switch the recording and camera when an auto switcher is connected.
42	O	-	-	Not used.
43	I	Lo	RESET	Reset input.
44	-	-	GND	Grounded.

Pin No.	I/O	Active Level	Abbreviation	Function
45	I	Hi	REC MUTE	Timing signal input for CAM SW output.
46	I	Pulse	AC CLOCK	Power supply clock signal input. Used to count the clock and detect a power failure.
47	I	Pulse	V.SYNC	Input to detect whether the video signal is input or not.
48	-	-	5V	A5V power input.
49	-	-	X2	System clock signal in modes other than the back-up mode.
50	I	-	X1	
51	-	-	GND	Grounded.
52	-	-	XT2	Clock signal of the clock in the back-up mode.
53	I	-	XT1	
54	-	-	GND	Grounded.
55	I	Hi/Lo	LADDER 1	A/D inputs to detect that buttons on the front panel have been pressed.
56	I	Hi/Lo	LADDER 2	
57	I	Hi/Lo	LADDER 3	
58	I	Hi/Lo	LADDER 4	
59	-	-	-	Not used.
62	O	Pulse	LOAD(M-ROM)	LOAD signal between the MAIN- μ P and EEP ROM.
63	-	-	5V	5V power inputs.
64	I	-	5V	

1-3. System Control μ P (IC1901) Pin Functions

Pin No.	I/O	Active Level	Abbreviation	Function
1	I	A/D	FL/TAB	Safety tab/cassette position detection input. H: TAB SW OFF (with tab), M: TAB SW ON (without tab), L: When cassette is being inserted/ejected. When a cassette without its safety tab is inserted, recording is inhibited and the cassette is ejected automatically in the timer recording state.
2	I	-	5V	A5V power inputs.
3	I	-	5V	
4	I	-	5V	
5	I	Lo	FWD END	When a "Lo" pulse is input from the sensor in the mechanism, the current mode is released. The end sensors each detect one end of the tape. When "Lo" pulses are input from both sensors, it is detected that a cassette is not inserted.
6	I	Lo	REW END	
7	I	Pulse	S.REEL	The period of the take-up reel pulses is calculated to detect whether slack tape has been taken up or not. When slack tape is detected, the mechanism is stopped. The supply reel pulses are used together with the take-up reel pulses to calculate the tape remaining time in the rewind mode.
8	I	Pulse	T.REEL	
9	O	Hi	REC MUTE	Video signal record muting control. Prevents the signal from being supplied to the video heads.
10	O	Hi	SLOW	Controls the voltage applied to the capstan motor.
11	O	Hi	REC(AUDIO)	Sets the audio circuits to the record mode.
12	O	-	-	Not used.
13	O	Hi	REC(VIDEO)	Sets the video circuits to the record mode and controls the REC9V power supply.
14	O	Hi	PB	Sets the video/audio circuits to the playback mode.
15	-	-	-	Not used.
16	O	Hi	LINE MUTE	Audio signal record and playback muting control. Prevents the signal from being supplied to the audio head.
17	I	-	X-TEST	A5V power input.
18	-	-	-	Not used.
19	I	Pulse	CFG.DIV	CFG divided frequency signal input. Used to detect whether or not the slack tape is taken up onto the supply reel in the eject mode.
20	-	-	-	Not used.
21	I	Hi/Lo	M.STATE 1	Mechanism state detection signal inputs to control the loading motor.
22	I	Hi/Lo	M.STATE 2	
23	I	Hi/Lo	M.STATE 3	
24	I	Hi/Lo	M.STATE 4	
25	-	-	-	Not used.
26	I	Hi	DUTY	Index detection input from the main servo IC.
27	O	Hi	HD48Hr	Tape speed mode control outputs.
28	O	Hi	TRN./SER+FHS	Output to control the switching of the operation of the double azimuth heads and the head switching control output during slow play.
29	O	Hi	UNLOAD	Signals that drive the loading motor to set the mechanism to the specified mode.
30	O	Hi	LOAD	
31	O	Hi	27Hr	Tape speed mode control outputs.
32	O	Hi	09Hr	
33	-	-	GND	Grounded.
34	O	Hi	03Hr	Tape speed mode control outputs.
35	O	Lo	-	Not used.
36	O	Lo	-	
37	O	Lo	-	
38	O	Hi/Mi/Lo	CAPST.CONT	Selects the capstan motor control mode. H: Reel (voltage control) mode, M (open): Servo output control mode, L: Brake mode
39	O	Hi	fH CORRECT 1	Cylinder speed correction outputs during frame advance. For the correction of horizontal jitter.
40	O	Hi	fH CORRECT 2	
41	O	Hi	SP HS	Video head switching select output.
42	O	Hi	SKEW	Skew correction output during time-lapse recording.
43	O	Hi	CTL CONT	CTL timing output during recording.

Pin No.	I/O	Active Level	Abbreviation	Function
44	O	Hi	REVERSE	Reverse mode control output. Drives the capstan motor in reverse.
45	-	-	-	Not used.
46	I	Lo	CTL	CTL pulse input for the slow play mode. CTL pulse input for the linear time counter.
47	I	Lo	CTL DIV	
48	I	Pulse	CS SYS	Chip select signal between the MAIN- μ P and SYS.CON- μ P.
49	I	Pulse	SW25Hz	Monitors the period of the SW25Hz signal to detect an abnormality in the cylinder motor drive. Stops the cylinder motor if an abnormality is detected. This is also used as the head switching signal during playback.
50	I	Pulse	DATA(M-S)	Common communications lines between the MAIN- μ P and SYS.CON- μ P;data is communicated synchronized with the clock signal.
51	O	Pulse	DATA(S-M)	
52	I	Pulse	CLK(M-S)	
53	I	Pulse	CFG/REV.CFG	The divided CFG pulses are input during playback. The capstan rotation sensor detection signal is input during recording.
54	-	-	GND	Grounded.
55	-	-	GND	
56	-	-	-	Not used.
57	-	-	GND	Grounded.
58	I	-	X1	Inputs to generate the system clock.
59	I	-	X2	
60	I	Lo	RESET	Initializes the SYS.CON- μ P when power is supplied.
61	O	Lo	SKEW2	Skew correction output during time-lapse recording.
62	O	Pulse	CLK(S-SRV)	Data bus lines between the SYS.CON- μ P and main servo IC; data is transferred to the main servo IC synchronized with the clock signal.
63	O	Pulse	DATA(S-SRV)	
64	O	Lo	DS	CH-1/CH-2 head switching signal.
65	-	-	-	Not used.
66	O	Hi	TRICK PLAY	Trick play mode signal. The line correlative noise canceller is removed from the video circuit and the peaking frequency of the 4.6MHz peaking circuits changed to 4.2MHz.
67	O	Lo	$\overline{09Hr}$	Outputs "Lo" only during recording in the 09Hr mode.
68	-	-	-	Not used.
69	-	-	-	
70	O	Lo	POWER ON	Control signal to prevent the capstan motor from malfunctioning immediately after power is supplied.
71	-	-	-	Not used.
72	O	Hi	SLOW BRAKE	Signal to control the voltage applied to the capstan motor when slow braking is applied.
73	-	-	GND	Grounded.
74	-	-	GND	
75	-	-	GND	
76	-	-	-	Not used.
77	-	-	-	
78	I	0-5V	V.LOCK	Picture control voltage input during still play.
79	I	0-5V	SLOW TRACK	Tracking voltage input during slow play.
80	I	0-5V	09Hr TRACK	Tracking voltage input during playback.
