VT-UX627A

TK

No.4716E

**VT-UX625A, AW  
VT-UX627A**

### US MECHANISM

This model uses a US Mechanism.  
Refer to the following manuals for the US  
Mechanism.

#### Manuals to be referred.

Name of manual	Manual No.
US Mechanism	4527E

This video deck is a VHS type video recorder. For proper operation, only the VHS type cassette must be used.

**VCR** *Plus* <sup>C<sup>3</sup></sup>  
w/Cable Channel  
Changer

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

### VIDEO CASSETTE RECORDER

June 1997

Image & Information Media Systems Division, Tokai

# SAFETY PRECAUTIONS

## NOTICE:

Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

1. When replacing a chassis in the instrument, all the protective devices must be put back in place, such as barriers, non-metallic knobs, adjustment and compartment covers/shields, isolation resistors/capacitors, etc.
2. When service is required, observe the original lead-dress. Extra precautions should be taken to assure correct lead dress in the high voltage circuit.
3. Always use the manufacturer's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacturer's. Furthermore, where a short-circuit has occurred, replace those components that indicate evidence of overheating.
4. Before returning an instrument to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the instrument by the manufacturer has become defective or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and service technician.

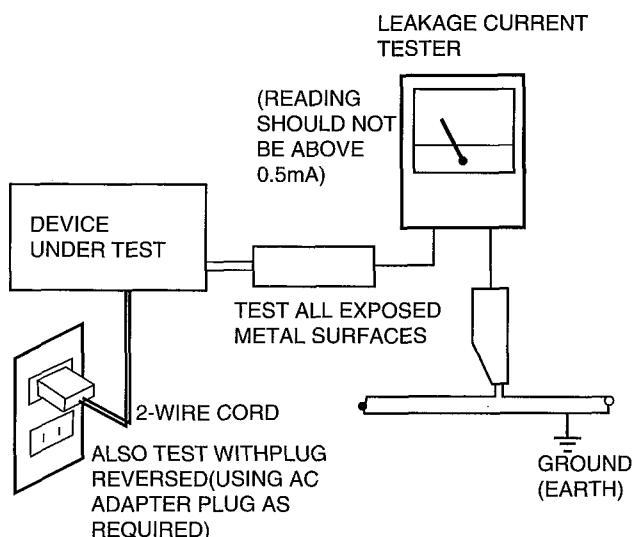

## Leakage Current Cold Check

With the AC plug removed from the AC120V, 60Hz source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to exposed metal parts (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of 0.3 Mohm and a maximum resistor reading of 5 Mohm. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

## Leakage Current Hot Check

Plug the AC line cord directly into a AC120V, 60Hz outlet (do not use an isolation transformer for this check).

Turn the AC power switch on. Using a "Leakage Current Tester", measure for current from all exposed metal parts of the cabinet (antennas, screwheads, metal overlays, control shaft, etc.), particularly an exposed metal part having a return path to the chassis, to a known ground (earth) (water pipe, conduit, etc.). Any current measured must not exceed 0.5 mA.

## AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE UNIT TO THE CUSTOMER.

## PRODUCT SAFETY NOTICE

Many electrical and mechanical parts have special safety-related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for a higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual. Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and the parts list in this Service Manual. The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards. Product safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies for, HITACHI Service Manual may be obtained at a nominal charge from HITACHI SALES CORPORATION.

**CHAPTER 1****GENERAL INFORMATION****1. Specifications**

Format:	VHS
Video Signal System:	NTSC color EIA standard
Record/Playback	Video: 4 Heads
System:	Audio: VHS Hi-Fi stereo record/playback system
Tape Speed:	33.35mm/sec(SP), 16.67mm/sec(LP)(playback only), 11.12mm/sec(EP)
RF Input:	UHF/VHF75 ohm
Tuner:	USA: 181 channel tuning ability* (125 cable channels) Canada: 178 channel tuning ability* (122 cable channels)
Type:	Auto programming frequency synthesis
Power Input:	AC120V 60Hz [VT-UX625A/UX627A] AC110-240V 50/60Hz [VT-UX625AW]
Power Consumption:	23W nominal
Cabinet Size:	17-1/8" (W) X 3-7/8" (H) X 11-1/8" (D) 43.5cm(W) X 9.9cm(H) X 28.2cm(D)
Weight:	8.8lbs. (4.0kg)
Storage Temperature:	-4° F to 131° F
Operating Temperature:	41° F to 104° F
Accessories:	1 coaxial cable (Part No. EW10251) 1 remote control unit (Part No. HL10883)[VT-UX625A, AW] 1 remote control unit (Part No. HL10884)[VT-UX627A] 2AA batteries 1 AC plug adaptor (Part No. EY10271)[VT-UX625AW]

\* Check your cable company's compatibility requirements.

For information about how to obtain there and other HITACHI accessories, please call HiTRON, Inc. TOLL FREE at 1-800-995-4500(in the continental United States). For ALASKA and HAWAII, please contact the nearest Hitachi Regional Office.

Design and specifications subject to change without notice.

## 4. Tips for Servicing

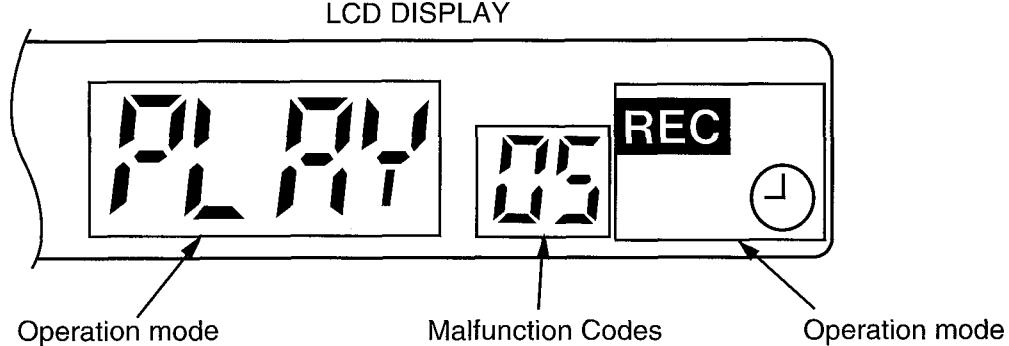

### 4-1. Trouble Display Function

This VCR has a function which displays mechanism malfunctions, etc. in the LCD display. Use this function to analyze the cause when the power is shut off due to a malfunction, etc. in the mechanism. Two types of information are displayed, (1)The operation mode when the malfunction occurred, (2)Malfunction Codes.

The details of the malfunction are displayed as follows.

#### Procedure to display a malfunction

Press the "CHANNEL DOWN" button on the VCR when the power is turned off and hold it; the malfunction code is displayed while the button is held depressed.

[Display of Details of Malfunction]

Displayed No.	Item	Details
00	No malfunction	
01	FL mechanism lock	Malfunction in insertion/ejection of cassette
02	Capstan lock	Malfunction of capstan motor drive during tape unloading
04	Reel lock	Reel rotation trouble when tape is running
05	Cylinder lock	Cylinder rotation malfunction
07	Loading mechanism lock	Malfunction in shifting mechanism mode
16	Servo lock	Shorting of 5V detected

[Mode Display when Malfunction Has Occurred]

Mode	Display
Stop	No display
Fast forward	<b>FF</b>
Super fast forward	<b>S.FF</b>
Rewind	<b>REW</b>
Super rewind	<b>S.REW</b>
Recording	<b>REC</b>
Timer recording	<b>REC</b>

Mode	Display
Recording pause	<b>REC</b> (flashes)
Playback	<b>PLAY</b>
Forward search	<b>SRCH</b>
Reverse search	<b>-SRCH</b>
Slow	<b>SLOW</b>
Still play	<b>STILL</b>
Reverse slow	<b>-SLOW</b>

No symbols are displayed if the malfunction occurred when a cassette was inserted or ejected, or the power was switched on from off, and off from on.

## 4-2. How to Remove the Cassette when a Malfunction Has Occurred in the Mechanism

If a cassette is caught in the mechanism because of a malfunction in the mechanism, remove it by the following procedure.

### [ Work Procedure ]

1. Remove the top cover.
2. Remove the front panel.

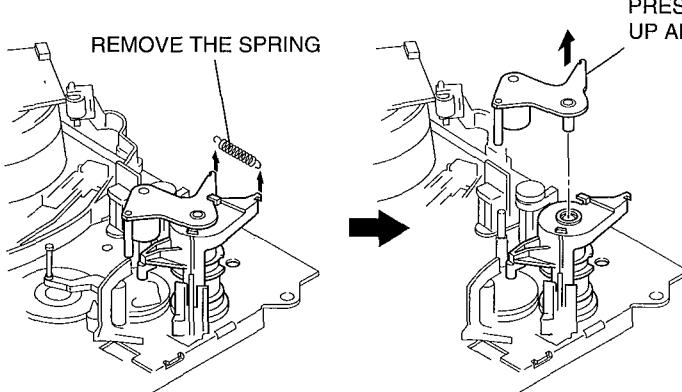

If the tape is wound round the cylinder in the loading state

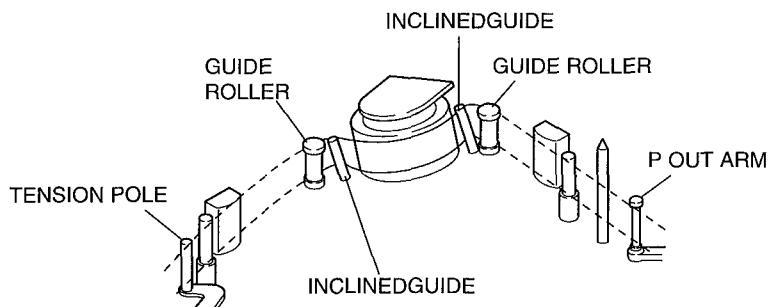

If the cassette does not come out from the FL mechanism in the unloading state.

Remove the spring and lift the pressure roller to pull it out.

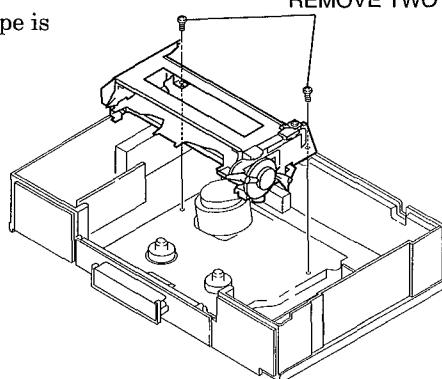

Slacken the tape and release it from the tension pole, guide rollers, inclined guides and P out arm.

- 1) Remove two screws holding the FL mechanism.
- 2) Hold the cassette lid with your fingers so the tape is not damaged and remove the FL mechanism.
- 3) Remove the slack tape and eject the cassette.

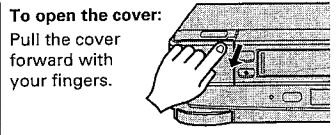

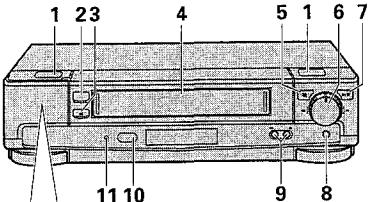

REMOVE TWO SCREWS

\* If you want to operate the VCR with remote control after operating the TV, first press the VCR button, and then press required buttons on the remote control.

### ■ MOVIE ADVANCE® (MA SKIP)

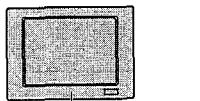

MOVIE ADVANCE™ locates the start of movie on rented tape, etc., by automatically skipping commercials, logo marks, previews, information on copyrights, etc. You can also locate the start of previews.

#### Notes:

- MOVIE ADVANCE™ can be operated only with cassettes recorded in the SP mode and the safety tab removed.
- MOVIE ADVANCE™ will not operate with damaged tapes.
- The VCR may not be able to locate the starts of specific movies or previews.

#### Locating the start of movie

- ① Turn on the TV and select the video channel (3 or 4).

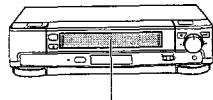

①

Or, if you are hooked up with an audio/video cable, set the TV to AUX or VIDEO.

①

- ② Insert a recorded tape.

②

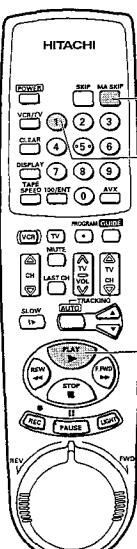

The power comes on automatically and the tape indicator lights on the display.

- Playback starts automatically.

②

- ③ Press the MA SKIP button.  
The "MOVIE ADVANCE" menu will appear on the TV screen.

③

- ④ Press the ① button to select "GO TO START OF MOVIE".

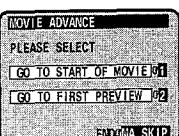

• The tape is fast forwarded. It will take several minutes to find the start of any designated movie.

⑤

• When the start of the movie has been located, the screen on the right will appear.

①

- ⑤ Press the PLAY button to start playing.

## SPECIAL PLAYBACK EFFECTS

### ■ MOVIE ADVANCE® (MA SKIP)

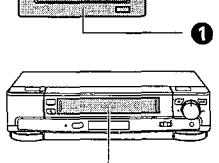

#### Locating the start of movie

- ① Turn on the TV and select the video channel (3 or 4).

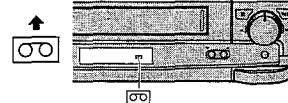

①

Or, if you are hooked up with an audio/video cable, set the TV to AUX or VIDEO.

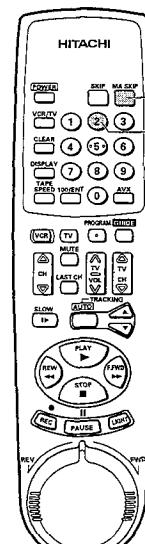

②

- ② Insert a recorded tape.

The power comes on automatically and the tape indicator lights on the display.

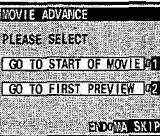

- Playback starts automatically.

③

④

- ③ Press the MA SKIP button.  
The "MOVIE ADVANCE" menu will appear on the TV screen.

- ④ Press the ② button to select "GO TO FIRST PREVIEW".

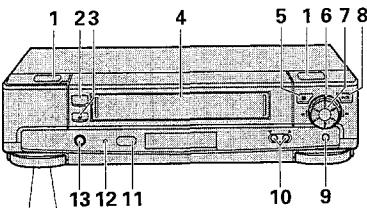

• The tape is fast forwarded, and a preview will play automatically.

- If you press the MA SKIP button while viewing the preview, the tape is fast forwarded, and the next preview will play automatically.

\* If you want to operate the VCR with remote control after operating the TV, first press the VCR button, and then press required buttons on the remote control.

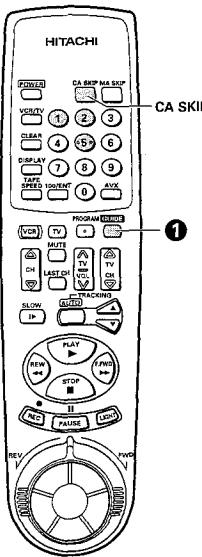

"COMMERCIAL ADVANCE" is a trademark of SRT, Inc.  
A Jerry Iguldin invention licensed in association with Arthur D. Little Enterprises, Inc."

#### ■ COMMERCIAL ADVANCE (CA SKIP)

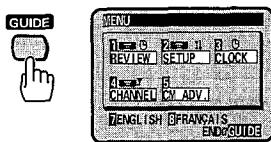

With COMMERCIAL ADVANCE™, the VCR detects commercials on the recorded tape and marks them, they can then be skipped when the tape is played back. This function can operate with a tape on which a program lasting for more than 15 minutes has been recorded. Using this function you can select whether the commercials are to be skipped automatically or manually by operating buttons and you can also select whether the TV screen becomes blue or the commercials are played in the forward search mode when they are being skipped. After a recording is finished, the VCR rewinds the tape to the commercials and marks them. After marking the commercials, the VCR fast forward the tape to the end of the recording.

**Note:** This function does not erase the commercials from the tape.

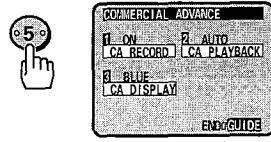

Refer to the following for details.

- Press the GUIDE button. The main on-screen menu will appear on the TV screen.

- Press the **②** button to select "CM ADV.". The "COMMERCIAL ADVANCE" menu will appear on the TV screen.

**COMMERCIAL ADVANCE™ Marking:**  
Confirm that CA RECORD "ON" is specified for item 1. If not, press the **①** button.

**During delayed recording:**  
When delayed recording of a program with commercials is finished and the VCR turns off, the tape will rewind automatically, and the commercials will be marked.

**During recording without using timer:**  
If the recording includes commercials, the tape is rewound automatically and the commercials are marked when the STOP button is pressed.

**Note:**

**The screen on the right may appear:**

- If you turn the VCR on immediately after delayed recording is finished and the VCR is turned off (when commercials are being marked), or
  - If you press any operation button after recording is stopped (while commercials are being marked).
- You can cancel marking of commercials by pressing the STOP button.

**To Turn Off Marking:**

Press the **①** button to select CA RECORD "OFF". The VCR will not mark commercials.

**To play back tapes recorded using Commercial Advance:**

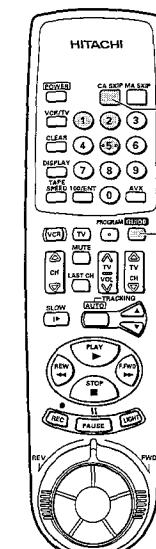

Press the **②** button to select "AUTO" or "MANUAL".

Select "AUTO" to play the marked commercials in the forward search mode automatically.

Select "MANUAL" if you don't want to play the commercials in the forward search mode. If "MANUAL" is specified, the marked commercials are played in the forward search mode only when the CA SKIP button on the remote control is pressed.

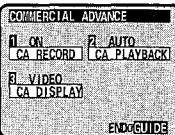

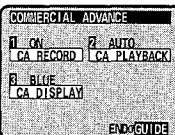

## SPECIAL PLAYBACK EFFECTS

To select a background for playback:

- Press the **③** button to select "VIDEO" or "BLUE".

Select "BLUE" if you want the screen to become blue when the commercials are being skipped. Select "VIDEO" if you want to play the commercials in the forward search mode when they are being skipped.

- Press the GUIDE button to end the setting.

This product incorporates COMMERCIAL ADVANCE™ circuitry that eliminates most commercial messages during replay of a recorded television broadcast. Under controlled test conditions with major network daytime and prime time broadcasts, approximately 96% of intraprogram commercials are eliminated.\* Actual results may vary and will depend upon the quality of television reception and the nature of programming recorded.

\* For a copy of the complete test report please write to:

Arthur D. Little Enterprises  
Acorn Park  
Cambridge, MA 02140-2390 USA

**Note:** If a power failure has occurred during recording, CA RECORD will not be performed precisely.

#### ■ Precautions

**Position of tape after commercials were marked:**

After marking commercials, the VCR fast forwards the tape to the end of recording to be ready for the next recording.

**If two or more programs were recorded continuously:**

If there is no time for marking the tape the recording of which has finished, the commercials will be marked when all recordings are finished.

**If the recording speed is changed:**

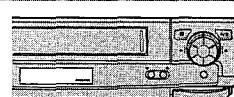

COMMERCIAL ADVANCE™ will operate with recordings at any speed.

**If a tape marked using COMMERCIAL ADVANCE™ is played back by another VCR which does not have COMMERCIAL ADVANCE™:**

The tape can be played back, of course, but the commercials cannot be skipped automatically.

#### ■ Markings after delayed recording is finished

After one delayed recording is finished, if it is 99 minutes or less until the next delayed recording starts, the commercials will be marked after the other delayed recording has finished. "CM SEARCH" lights in the VCR display until the next delayed recording starts. Do not perform eject, play, fast forward or rewind while "CM SEARCH" is displayed. If you do, "CM SEARCH" will turn off and marking will be cancelled (marking will not be done).

"MOVIE ADVANCE™" is trademark of SRT, Inc.  
A Jerry Iggulden invention licensed in association with Arthur  
D. Little Enterprises, Inc.™

### ■ MOVIE ADVANCE™ (MA SKIP)

MOVIE ADVANCE™ locates the start of movie on rented tape, etc., by automatically skipping commercials, logo marks, previews, information on copyrights, etc. You can also locate the start of previews.

#### Notes:

- MOVIE ADVANCE™ can be operated only with cassettes recorded in the SP mode and the safety tab removed.
- MOVIE ADVANCE™ will not operate correctly with tapes which have been played part way.
- MOVIE ADVANCE™ will not operate with damaged tapes.
- The VCR may not be able to locate the starts of specific movies or previews.

#### Locating the start of movie

- ① Turn on the TV and select the video channel (3 or 4).

Or, if you are hooked up with an audio/video cable, set the TV to AUX or VIDEO.

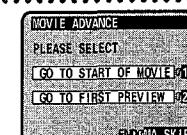

- ② Insert a recorded tape.

- The power comes on automatically and the tape indicator lights on the display.
- Playback starts automatically.
- If you have inserted a tape which was played part way, rewind the tapes to its start, and then press the PLAY button.

- ③ Press the MA SKIP button.

The "MOVIE ADVANCE" menu will appear on the TV screen.

- ④ Press the ① button to select "GO TO START OF MOVIE".

- The tape is fast forwarded. It will take several minutes to find the start of any designated movie.

- When the start of the movie has been located, the screen on the right will appear.

- ⑤ Press the PLAY button to start playing.

## SPECIAL PLAYBACK EFFECTS

### ■ MOVIE ADVANCE™ (MA SKIP)

#### Locating the start of preview

- ① Turn on the TV and select the video channel (3 or 4). Or, if you are hooked up with an audio/video cable, set the TV to AUX or VIDEO.

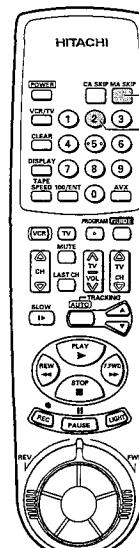

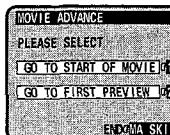

- ② Insert a recorded tape.

- The power comes on automatically and the tape indicator lights on the display.
- Playback starts automatically.

- ③ Press the MA SKIP button.

The "MOVIE ADVANCE" menu will appear on the TV screen.

**CHAPTER 2****D I S A S S E M B L Y****1. Before Starting Disassembly**

- 1) Unplug the power cord from the AC outlet.
- 2) [Removal procedure]
 

If a special procedure is required when dismantling any component, it is indicated using numbers. Follow the numbers (1),(2),(3) ... shown in the illustrations.

[Reinstallation procedure]

Reinstall each component in the reverse order to removal when otherwise not specified.
- 3) Insert card connectors securely all the way as they are of the direct insertion type.

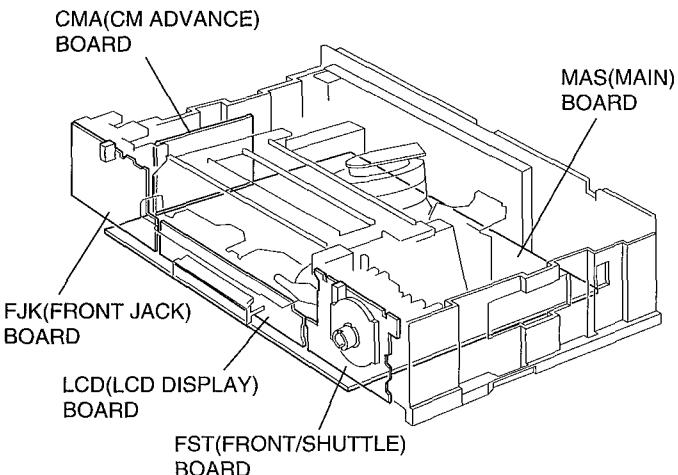

Fig. 1-1

**2. Disassembly Method**

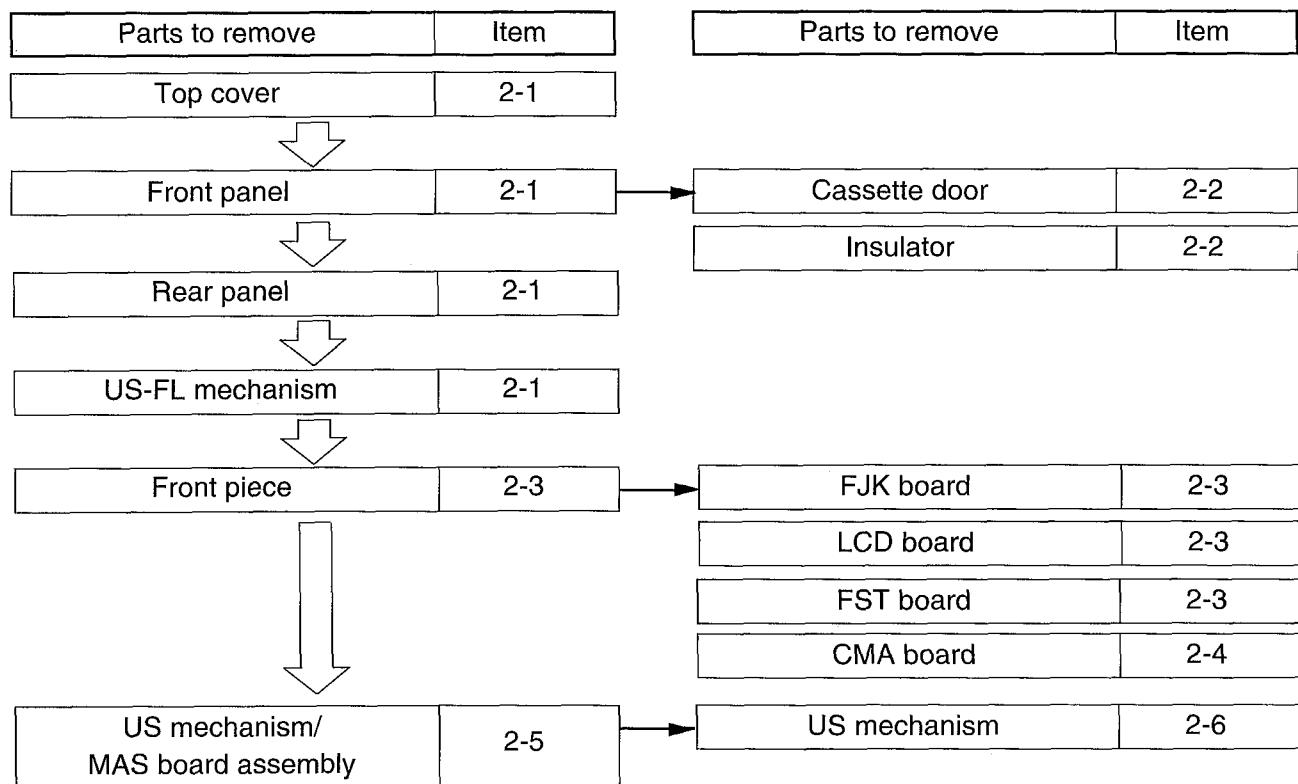

When replacing defective parts, first refer to the "Parts hierarchy chart" shown below. This chart shows the procedure for parts removal when replacing defective parts.

## [How to use the parts hierarchy chart]

- (1) Locate the part to be replaced.
- (2) Check the parts in the ranks above the part to be replaced and start dismantling.
- (3) Replace the defective part and reinstall the parts in the reverse order to that shown in the parts hierarchy chart.

**Parts Hierarchy Chart**

Note: Dismantle parts in the eject state.

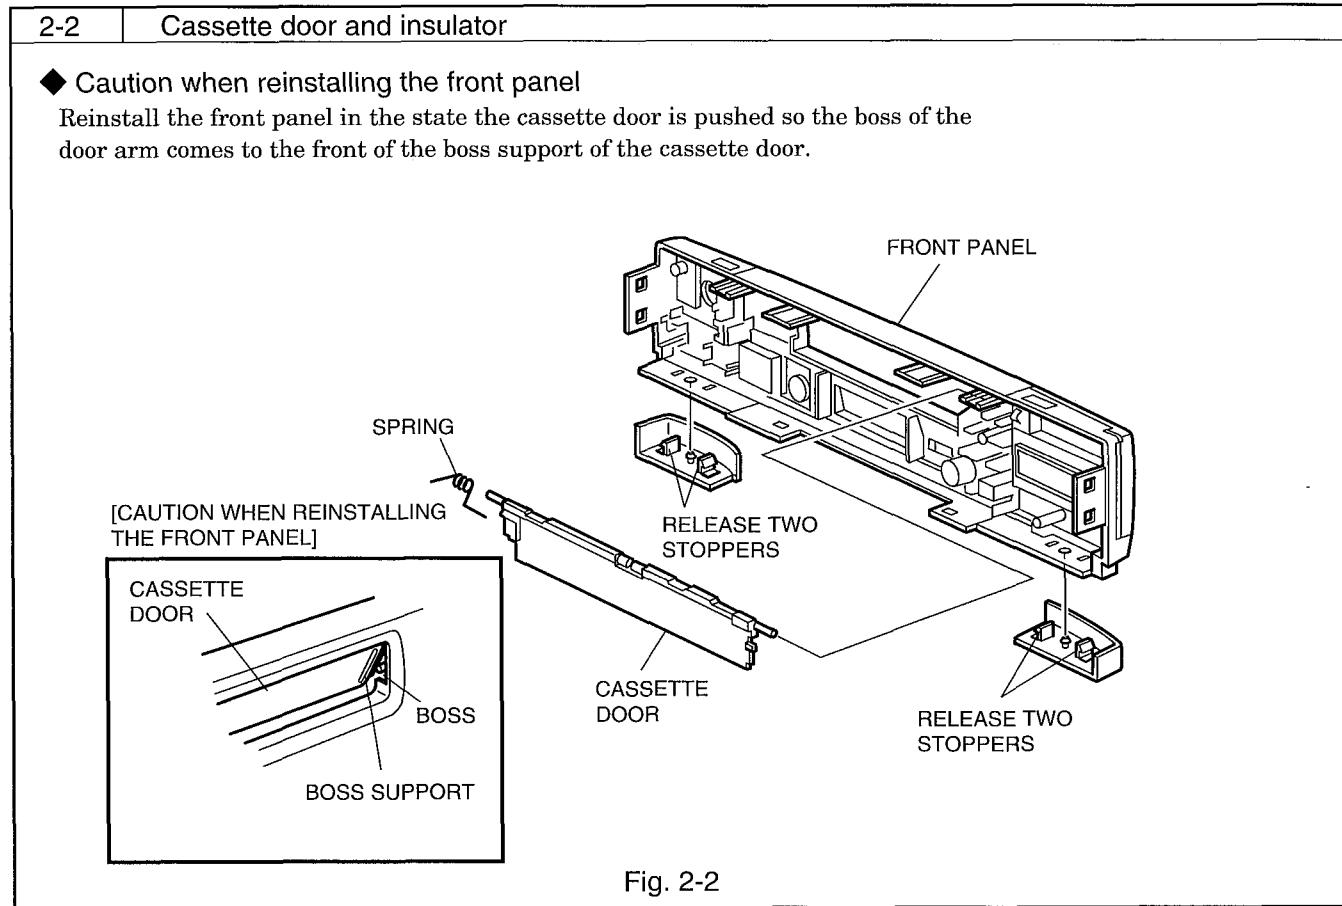

## Disassembly Procedure Diagrams

Item	Parts to remove
2-1	Top cover, front panel, rear panel and US-FL mechanism

◆ Caution when reinstalling the US-FL mechanism  
Reinstall the US-FL mechanism in the state that the cassette holder is pulled forward.  
(Otherwise, the switch arm could damage the FL switch on the MAS board.)

Fig. 2-1

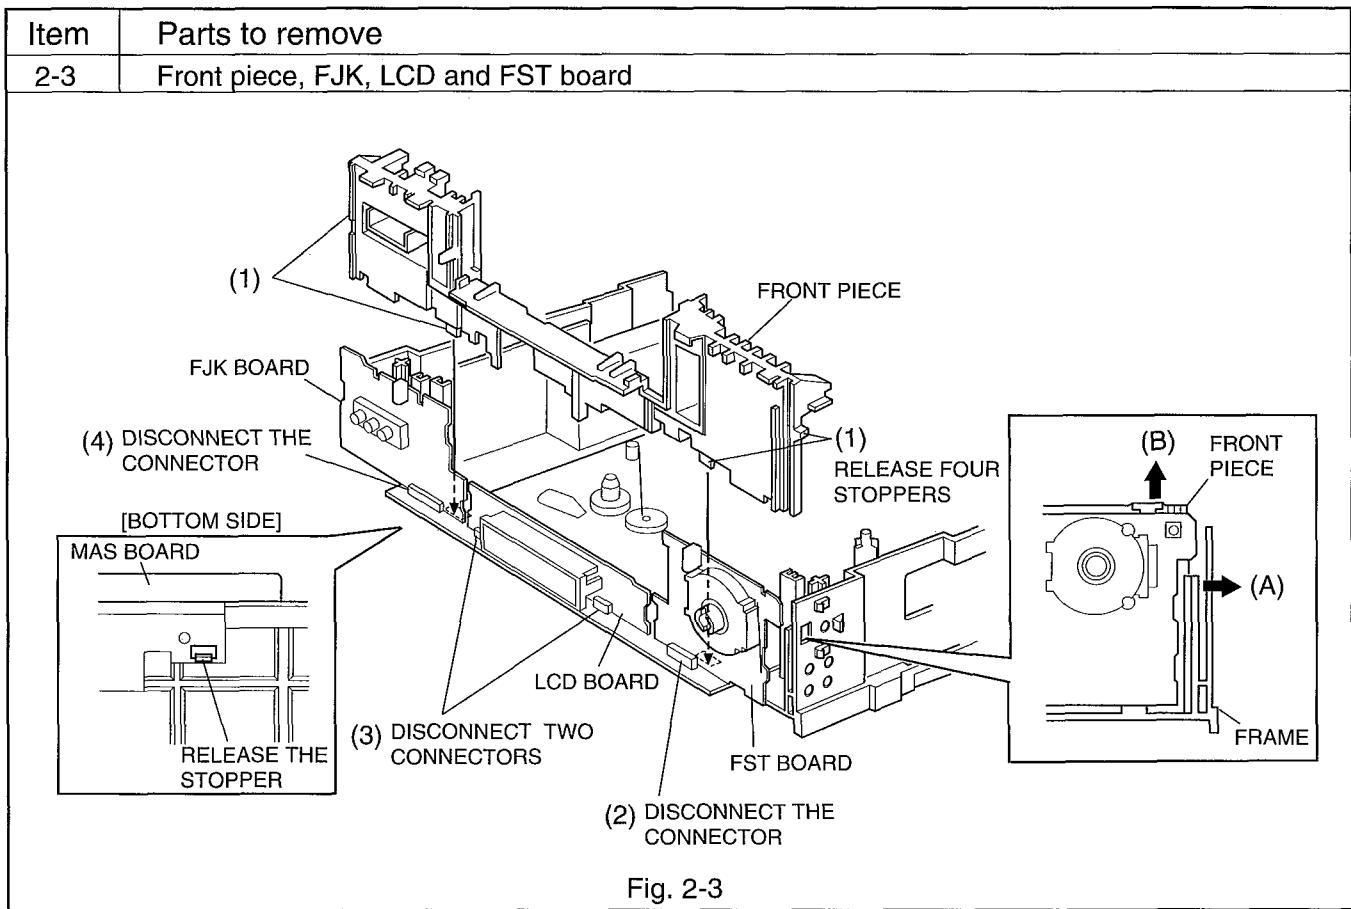

Fig. 2-3

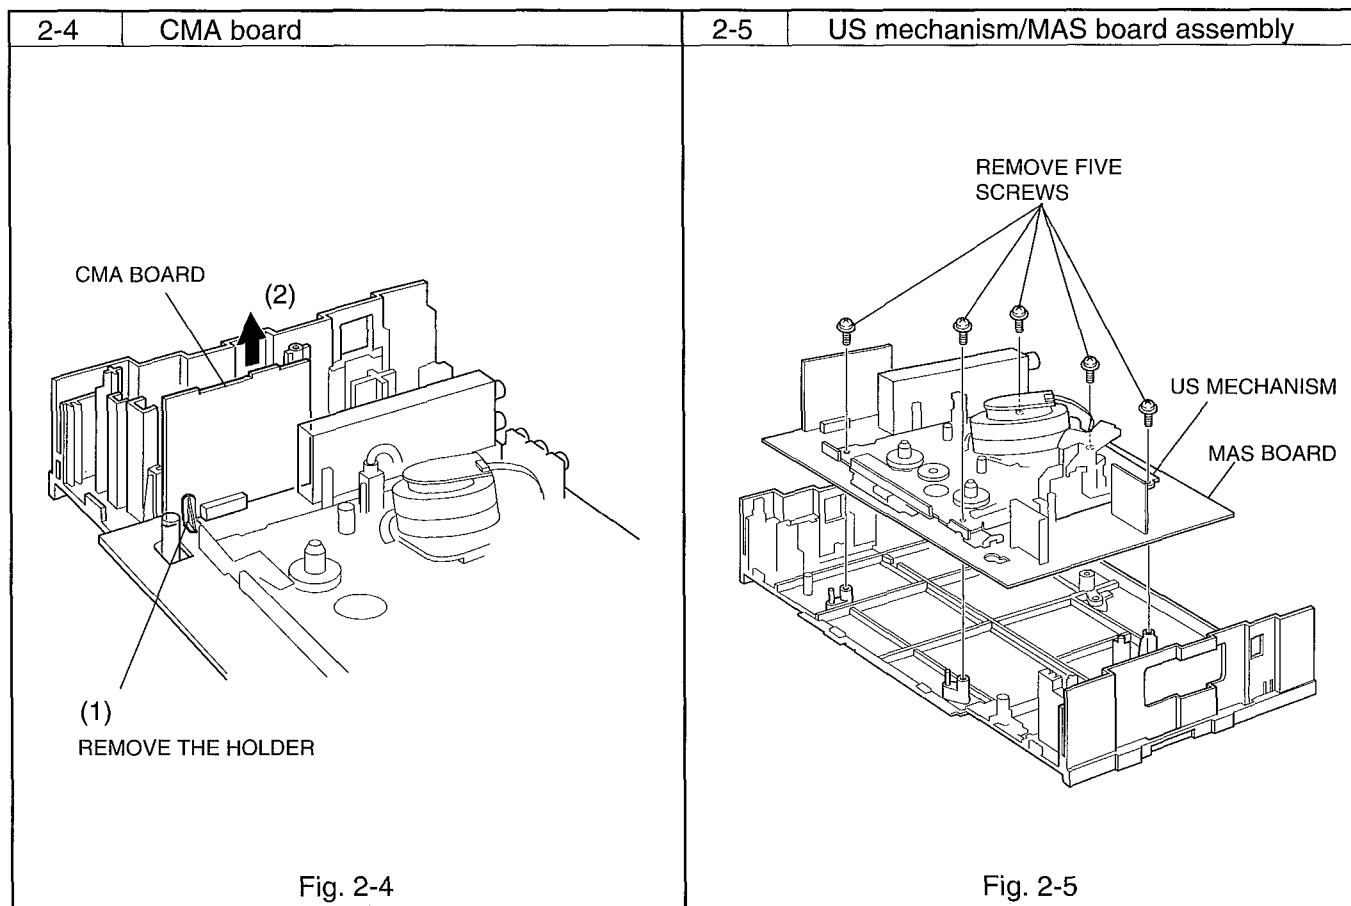

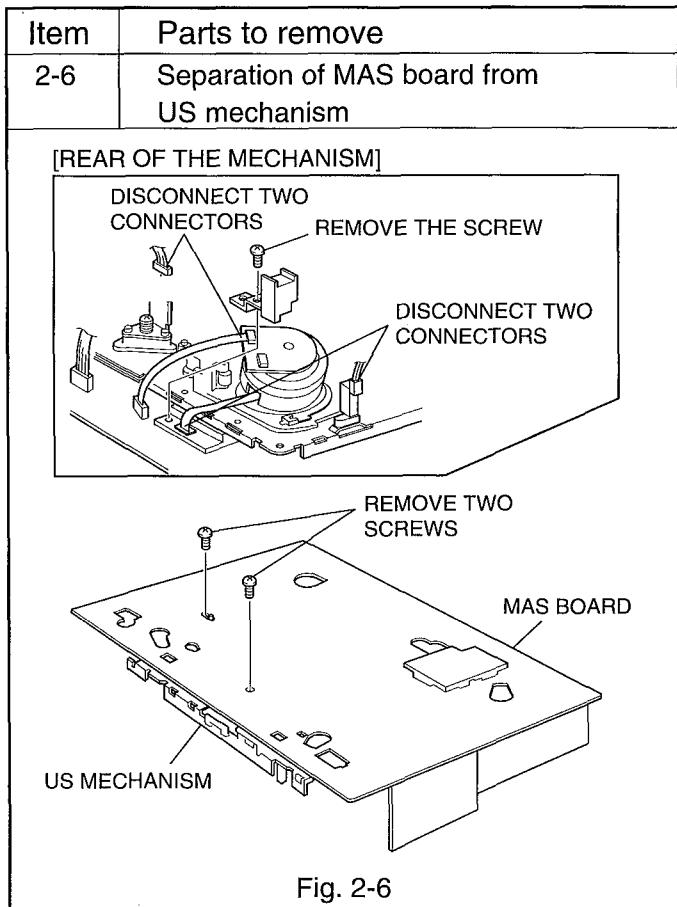

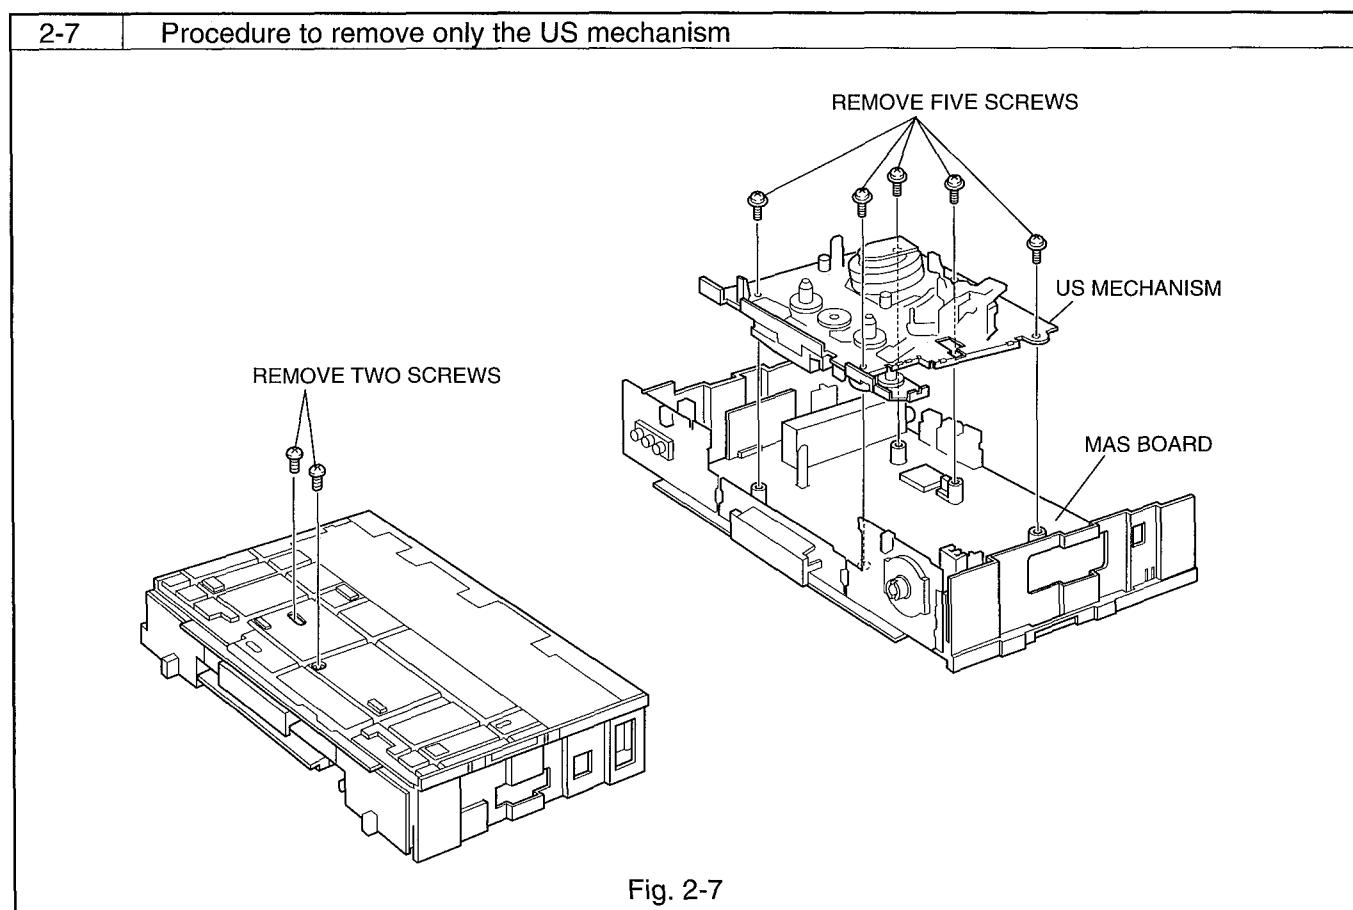

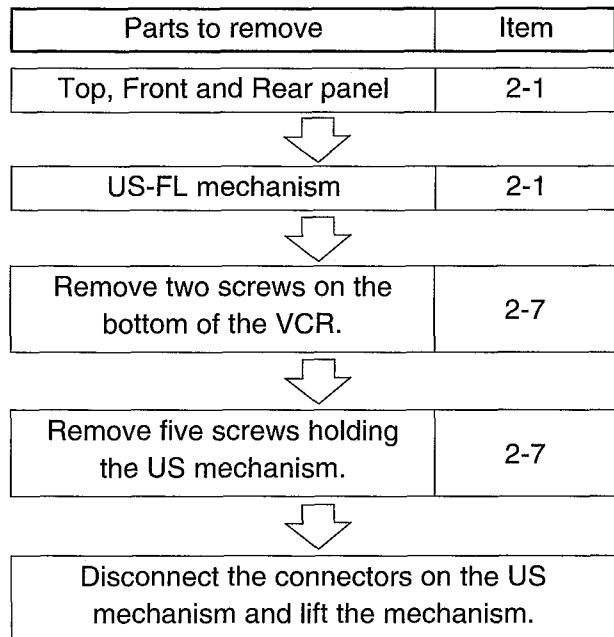

Fig. 2-4

Fig. 2-5

### Procedure to remove only the US mechanism

With this VCR the US mechanism can be removed without removing the MAS board. This is done by a different method from the normal disassembly method.

### 3. Cautions When Reinstalling the US Mechanism

This VCR has mechanism sensors on the MAS board and the capstan and loading motors are connected via direct connectors. Therefore, when reinstalling the US mechanism, observe the following cautions.

- 1) Align the  $\nabla$  mark and mode no. 1 of the mechanism state switch on the MAS board. (Mode no. 1 of the mechanism state switch has a click position.)
- 2) Check that mode no. 1 on the P drive gear in the mechanism and the  $\nabla$  mark of the spring hook are aligned. If they are not aligned, turn the loading motor pulley to align them.
- 3) Pass the end LED through the hole in the mechanism and install the mechanism from immediately above using the installation position holes as reference. Check that the boss of the mechanism state switch and the hole in the cam gear are aligned.
- 4) Push the terminal sections (shaded sections  ) of the capstan and loading motors and check that they are inserted securely.

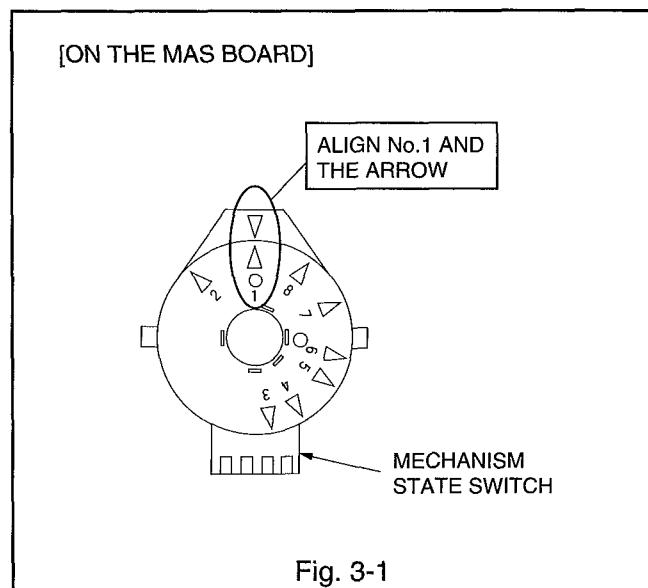

Fig. 3-1

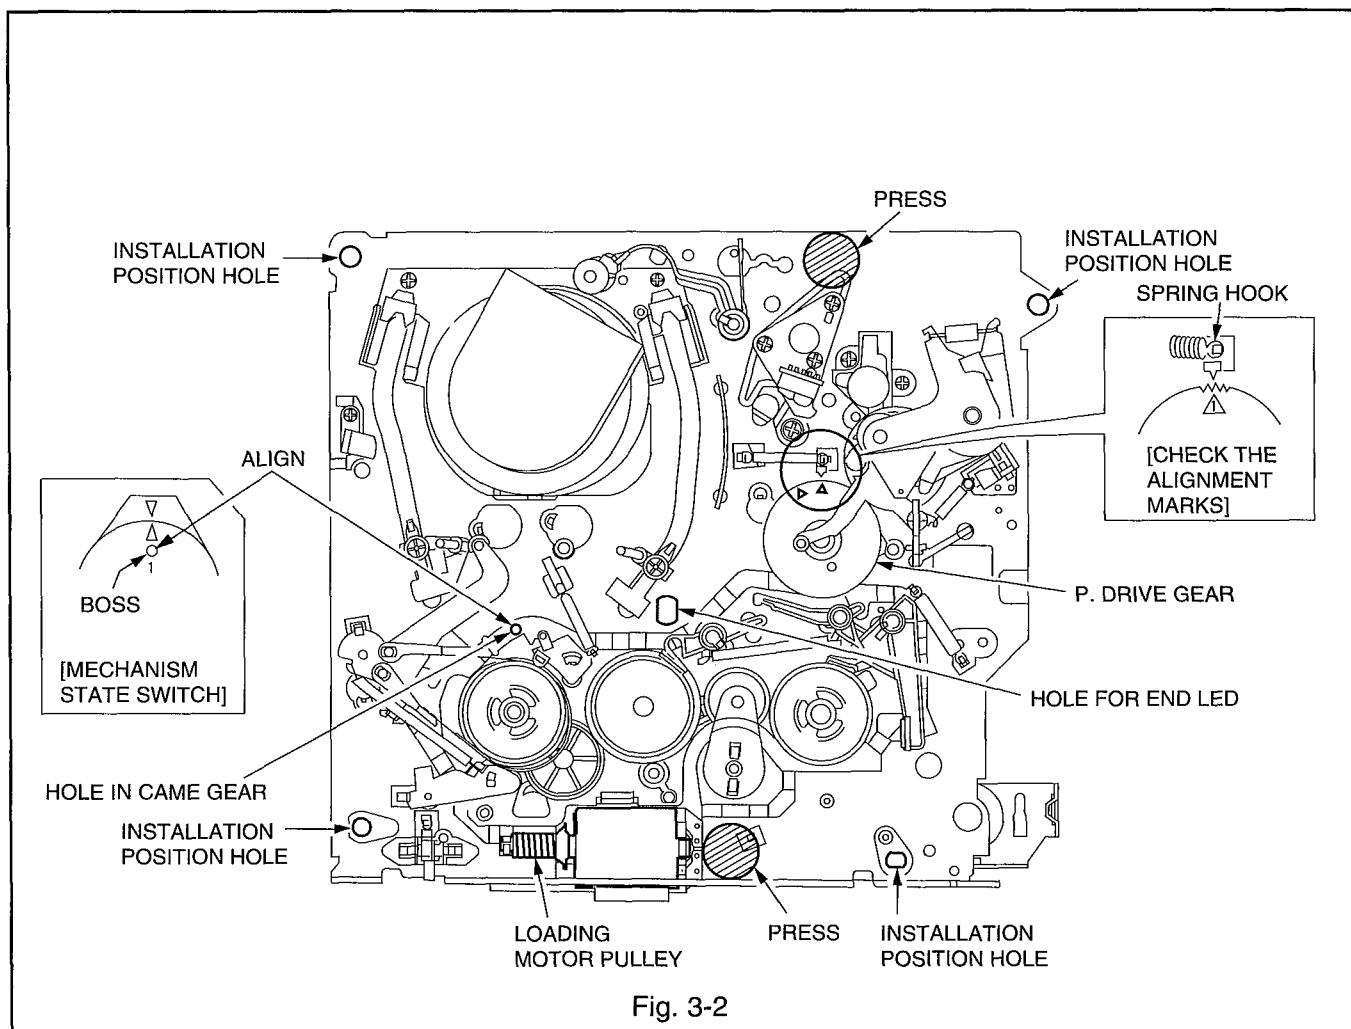

Fig. 3-2

**CHAPTER 3****ELECTRIC CIRCUIT ADJUSTMENT****◆ Service Position****1. Servicing position during electrical adjustment**

Perform adjustment after removing the top cover, front panel and rear panel.

When the shield cover of the connector between the cylinder motor and MAS boards is removed, noise appears in the playback picture. Attach the shield cover when checking the picture on the screen.

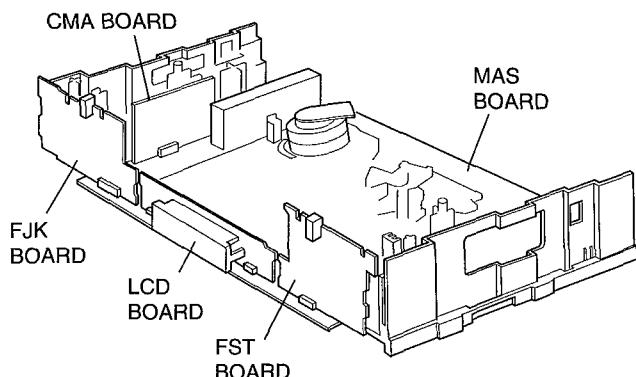

Fig. 1

**2. Servicing positions when repairing and checking circuits****2-1. Procedure to set the FJK, LCD, FST and CMA boards to the servicing positions (Fig. 2)**

- 1) Remove the top cover and front panel.
- 2) Remove the rear panel.
- 3) Remove the US-FL mechanism.
- 4) Remove the front piece.
- 5) Open each board as shown in the figure below and perform checks from the pattern sides indicated by the arrows.

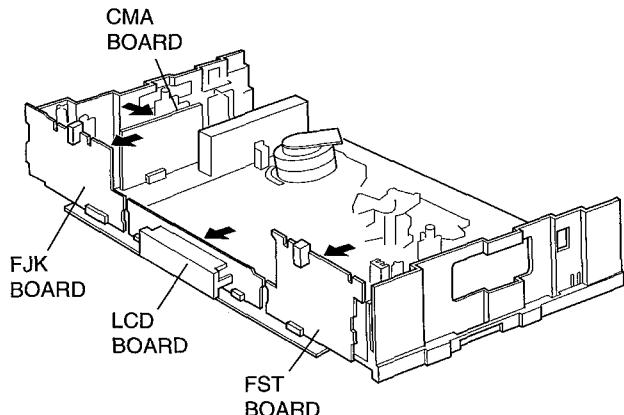

Fig. 2

**2-2. Procedure to set the MAS board to the servicing position (Fig. 3)**

- 1) Remove the top cover and front panel.
  - 2) Remove the rear panel.
  - 3) Remove the US-FL mechanism and front piece.
  - 4) Remove the MAS board, with the LCJ and FST boards and US mechanism assembled from the frame.
  - 5) Turn over the MAS board and perform checks from the pattern side indicated by the arrow.
- Note the following two points at this time.
- 1) Lay an insulation sheet under the boards.
  - 2) Attach the shield cover at the rear of the cylinder. Attach the US-FL mechanism when loading the tape.

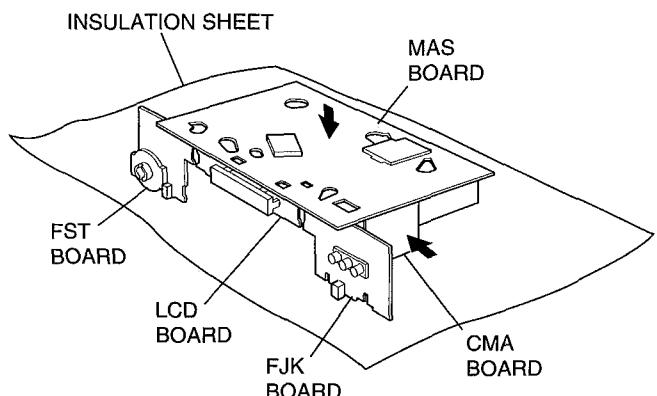

Fig. 3

**3. Be careful of electric shocks**

The power supply block on the right of the VCR has a heat sink which generates a high voltage. "HIGH VOLTAGE" is printed on the heat sink.

Take great care when handling this heat sink when the power is turned on during servicing.

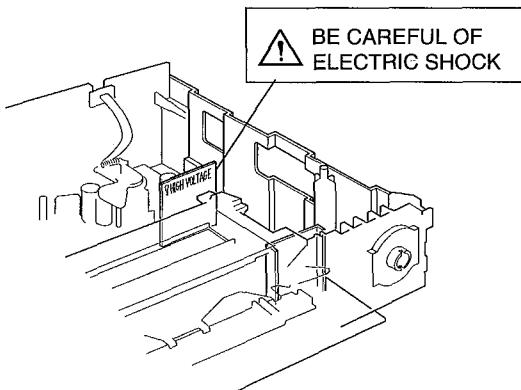

Fig. 4

# ◆ Electrical Circuit Adjustment

## 1. Test equipment/jigs necessary for adjustment

- 1) Dual-trace oscilloscope
- 2) Color bar generator
- 3) Voltmeter
- 4) Monitor TV (with A/V jacks)
- 5) Alignment tapes:  
NTSC tape : Part No. 7099046  
30HMP2-1 : Part No. 7099089  
24HMAF-2 : Part No. 7099153  
(Hi-Fi alignment tape)  
CA,MA tast tape : Part No. 7069192
- 6) Blank tape
- 7) C/R oscillator

## 2. Cautions on adjustment

- 1) The following conditions apply when otherwise not specified.  
Probe of oscilloscope: 10:1  
Synchronization of oscilloscope: Internal sync  
Ground of test equipment: PG2508 pin 6  
(on MAS board)
- 2) When performing more than one adjustment, follow the specified order.

## 3. Tips for adjustment

### 3-1. Procedure to reset the main microprocessor

The main microprocessor is not reset even when the power cord is unplugged from the AC outlet because its power is backed up by a backup circuit. Press S1719 on the FJK board to reset the entire microprocessor.

Do not press the reset switch with the power cord unplugged from the AC outlet as the slow tracking preset value could drift. If the preset value drifts, plug the power cord into an AC outlet and press the reset switch again with the power turned on. It is recommended that you press the reset switch after reinstalling the front panel.

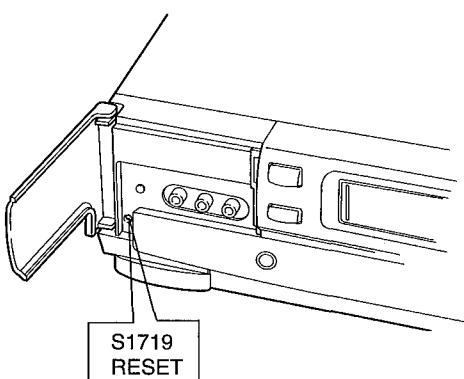

Fig. 5

### 3-2. Procedure to switch off the blue background function

- 1) Press the "GUIDE" button of the remote control to display the menu on the monitor TV screen.
- 2) Press "2" to select the VCR setup screen.
- 3) Press "1" to specify blue background off.

### 3-3. Procedure to obtain the EP head playback mode (X-value adjustment test mode)

Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control provided simultaneously when an alignment tape is being played and hold them, then press the "CHANNEL ▽" button on the VCR; The VCR enters the EP head playback mode (X-value adjustment test mode).

Check that "TEST" appears in the LCD display.

## 4. Connections of test equipment

Connect the test equipment as follows when otherwise not specified.

- 1) Connect a color bar generator to the video input 1 jack of the VCR.
- 2) Connect a monitor TV to the video output 1 jack of the VCR.
- 3) Connect a monitor TV (able to handle a stereo signal) to the audio output 1 jack.
- 4) Connect an antenna to the antenna jack and receive a TV broadcast (only for sound multiplex adjustment).

## 5. Test Points and Adjustment Points

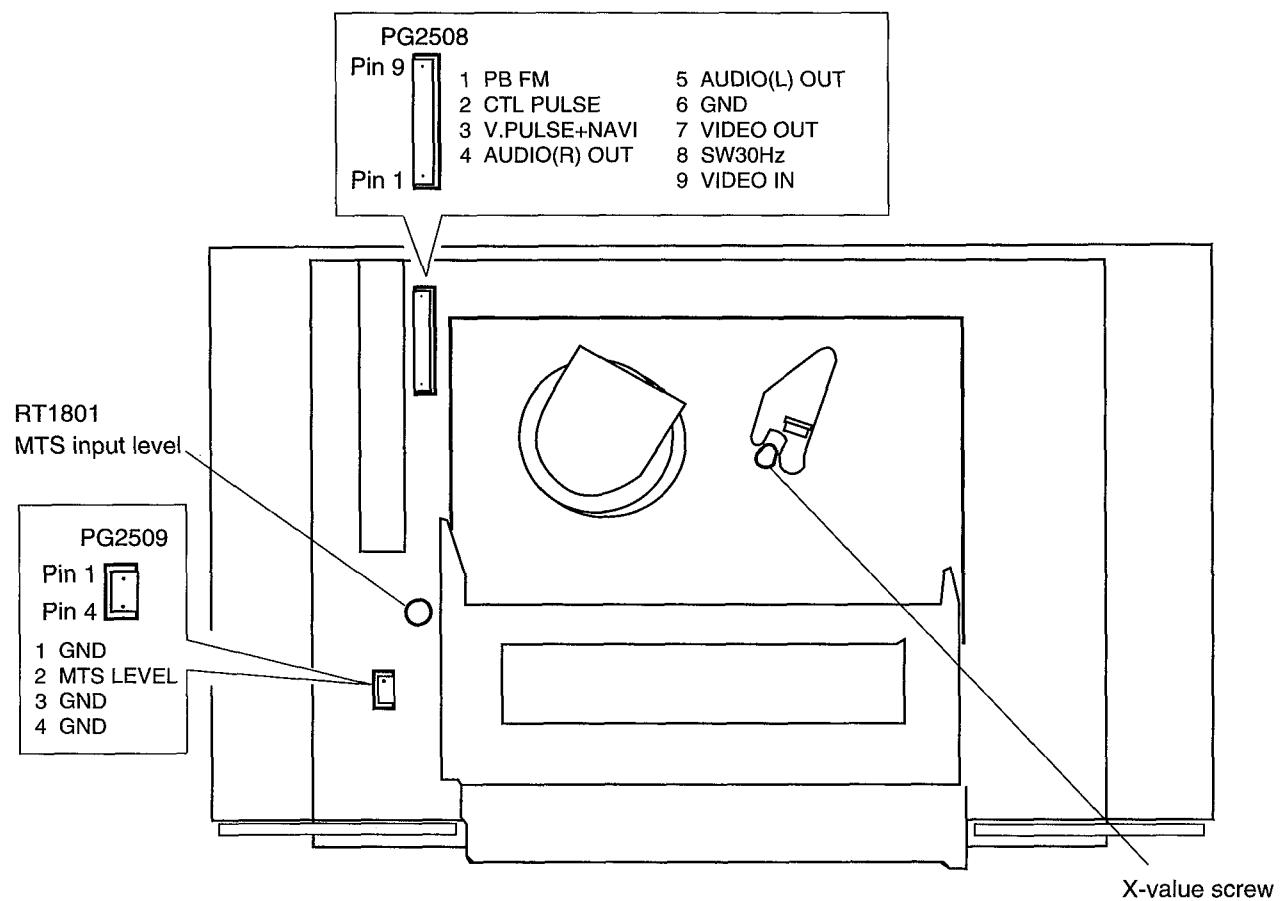

Fig. 6 MAS (Main) Circuit Board [Components Side]

## 6. Servo Circuit Adjustments

### 6-1. Switching point adjustment (Fig. 6)

#### Purpose:

To set the switching point of the video heads during playback to the center where the CH-1 and CH-2 envelopes overlap each other.

#### Fault due to incomplete adjustment:

Vertical sync signal is degraded and vertical jitter occurs.

Switching noise appears across the bottom of the screen.

#### Test Equipment/Jigs and Connection Points

Oscilloscope      CH-1: Video out jack  
                      CH-2: PG2508-8(SW30Hz)

#### Alignment tape (30HMP2-1)

#### State of VCR

- 1) Play the alignment tape
- 2) Set to the X-value adjustment test mode.

#### Adjustment Point

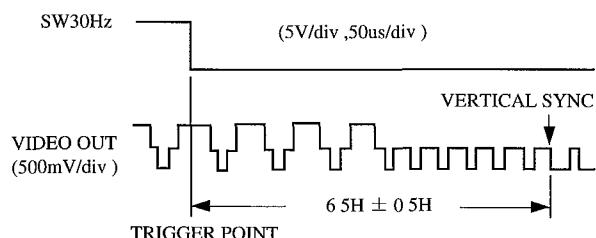

F.FWD button(remote control)

REW button(remote control)

#### Adjustment Procedure

- 1) Play the alignment tape.
- 2) Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control provided simultaneously and hold them, then press the "CHANNEL ▽" (S2709) button of the VCR to set the VCR to the test mode. (Check that "TEST" appears in the display.)
- 3) Press the "F.FWD" and "REW" buttons of the remote control so the phase from the vertical sync to the trailing edge (trigger position) of the SW30Hz pulse is set to  $6.5H \pm 0.5H$ .
- 4) Press the "STOP" button to release the test mode.

#### Waveforms

#### <Conditions of oscilloscope>

Trigger with CH-2.

Set the sync slope to "-".

### 6-2. X-value adjustment (Fig. 6)

#### Purpose:

To ensure compatibility with other VCRs.

#### Fault due to incomplete adjustment:

When a tape recorded by another VCR is played back, the tracking is not optimized and noise appears on the screen.

#### Test Equipment/Jigs and Connection Points

Oscilloscope      CH-1: PG2508-1 (PB FM)  
                      CH-2: PG2508-8 (SW30Hz)

#### Alignment tape (30HMP2-1)

#### State of VCR

- 1) Play the alignment tape.
- 2) Set to the X-value adjustment test mode.

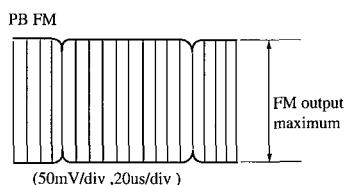

#### Adjustment Point

#### Groove for the adjustment X-value

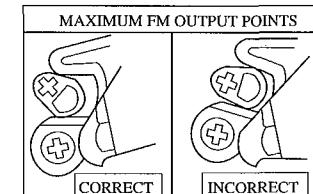

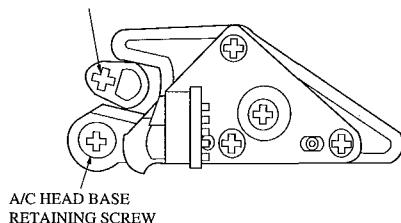

#### Adjustment Procedure

- 1) Play the alignment tape.
- 2) Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control provided simultaneously and hold them, then press the "CHANNEL ▽" (S2709) button of the VCR to set the VCR to the test mode. (Check that "TEST" appears in the display.)
- 3) Loosen the screw holding the A/C head base (do not loosen it excessively).
- 4) Insert a screwdriver into the groove for adjusting the X-value and adjust so the FM output is maximum. There are two maximum FM output points when the groove for adjusting the X-value is turned. Adjust the FM output to a maximum when the groove is at the correct position as shown in the figure below.
- 5) Press the "STOP" button to release the test mode.

#### Waveforms

GROOVE FOR ADJUSTMENT  
THE X-VALUE

## Servo Circuit Adjustments

### 6-3. Vertical jitter adjustment

Purpose:

To suppress vertical jitter during slow and still play.

Fault due to incomplete adjustment:

Vertical jitter appears in the picture during slow and still play.

Test Equipment/Jigs and Connection Points

Monitor TV : Video output jack

Color bar generator: Video input jack

Blank tape

State of VCR

Record a color bar signal and play it using the same VCR.

Adjustment Point

CHANNEL △ (S2708)

CHANNEL ▽ (S2709)

Adjustment Procedure

<EP vertical jitter correction>: Record in the EP mode and play it back using the same VCR.

1) Press the "PAUSE" button to set the VCR to the still play mode.

2) Use the CHANNEL buttons of the VCR to suppress vertical jitter of the picture.

<SP vertical jitter correction>: Record in the SP mode and play it back using the same VCR.

1) Press the "PAUSE" button to set the VCR to the still play mode.

2) Use the CHANNEL buttons of the VCR to suppress vertical jitter in the picture.

### 6-4. Forward slow tracking preset adjustment

Purpose:

To adjust the timing with which the brake pulse of the capstan motor is generated during slow play so that noise is minimum.

Fault due to incomplete adjustment:

Noise appears during slow play and the picture is not clear.

Test Equipment/Jigs and Connection Points

Monitor TV : Video output jack

Color bar generator: Video input jack

Blank tape (T-120)

State of VCR

Slow tracking: Unplug the power cord to set the slow tracking to the center.

Adjustment Point

CHANNEL △ (S2708)

CHANNEL ▽ (S2709)

Adjustment Procedure

1) Record a signal on the middle of a T-120 blank tape in the EP mode and play it back using the same VCR.

2) Press the "TRACKING ▲" and "TRACKING ▽" buttons of the remote control (provided) simultaneously during playback and hold them, then press the "PLAY" button (S2701) to set the VCR to the forward test slow mode.

3) Use the CHANNEL buttons so the slow feed noise appears across the bottom of the monitor screen and then it is driven out from the bottom of the screen.

4) Check that no noise appears on the monitor screen.

5) Press the "PLAY" button to return the VCR to the playback mode (the preset data is written to the EEPROM).

6) Perform the same procedure to perform slow tracking preset adjustment in the SP mode.

Do not press the reset switch after adjustment when the power is not turned on as the preset value could drift. If the preset value drifts, turn the power on and press the reset switch again for recovery.

### 6-4. Reverse slow tracking preset adjustment

Purpose:

To adjust the timing with which the brake pulse of the capstan motor is generated during reverse slow play so that noise is minimum.

Fault due to incomplete adjustment:

Noise appears during reverse slow play and the picture is not clear.

Test Equipment/Jigs and Connection Points

Monitor TV : Video output jack

Color bar generator: Video input jack

Blank tape (T-120)

State of VCR

Slow tracking: Unplug the power cord to set the slow tracking to the center.

Adjustment Point

CHANNEL △ (S2708)

CHANNEL ▽ (S2709)

Adjustment Procedure

1) Record a signal on the middle of a T-120 blank tape in the EP mode and play it back using the same VCR.

2) Press the "TRACKING ▲" and "TRACKING ▽" buttons of the remote control (provided) simultaneously during still play and hold them, then press the "PLAY" button (S2701) to set the VCR to the reverse test slow mode.

3) Use the CHANNEL buttons so the slow feed noise appears across the bottom of the monitor screen and then it is driven out from the bottom of the screen.

4) Check that no noise appears on the monitor screen.

5) Press the "PLAY" button to return the VCR to the playback mode (the preset data is written to the EEPROM).

6) Perform the same procedure to perform reverse slow tracking preset adjustment in the SP mode.

Do not press the reset switch after adjustment when the power is not turned on as the preset value could drift. If the preset value drifts, turn the power on and press the reset switch again for recovery.

## 7. Audio/MTS Circuit Adjustments

### 7-1. Hi-Fi audio playback level check

#### Purpose:

To set the playback level of the Hi-Fi audio signal to the specified value.

#### Fault due to incomplete adjustment:

The appropriate volume cannot be obtained during playback.

#### Test Equipment/Jigs and Connection Points

##### Voltmeter

When checking L-CH:Audio output (L) jack

When checking R-CH:Audio output(R)jack

#### Hi-Fi alignment tape (24HMAF-2)

#### State of VCR

Play Hi-Fi alignment tape.

#### Adjustment procedure

Use the same checking procedure for both the L and R channels.

Check that the voltmeter reads  $-7.8\text{dBs} \pm 3.0\text{dBs}$ .

If it cannot be confirmed, check the playback signal system.

### 7-2. MTS input level adjustment

#### Purpose:

To set the level of the MTS signal supplied to the MTS processor in IC1801 from the tuner/IF to the specified level.

#### Fault due to incomplete adjustment:

1) The S/N deteriorates or distortion becomes conspicuous.

2) Stereo separation deteriorates.

#### Test Equipment/Jigs and Connection Points

MTS sound signal generator: IN FORM ANT

Voltmeter: PG2509-2

#### State of VCR

##### E-E mode

#### Adjustment Point

RT1801

#### Adjustment procedure

1) RT1801: Set the reading of the voltmeter to  $-20.0\text{dBs} \pm 0.2\text{dBs}$ .

#### Notes:

MTS sound signal generator settings:

1) Audio frequency: 300Hz

2) Modulation signal: L+R

#### Monitor TV settings:

1) Press the "GUIDE" button of the remote control to display the menu on the monitor TV screen.

2) Press "2" of the remote control.

3) Press "6" of the remote control to select the SAP option and switch it from OFF to ON.

## 8. CMA Circuit Adjustments

### 8-1. Setup for adjustment

#### ■ Specifications of CA/MA alignment tape

A	B	C	D
10 AUDIO	10IRE Black burst	10	10IRE Black burst
4s	4s	4s	4s
VIDEO	"10 AUDIO"	10+2IRE	"10"
AUDIO	1kHz-8dBm	1kHz-8dBm	1kHz-8dBm
	No audio		

The above luminance level is varied and the signals with levels up to 10, 12, 14, 16, 18, 20, 22, 24 and 16 IRE are recorded; this pattern is repeated thereafter.

#### ■ Connections

- (1) Prepare a VCR (VT-FX61XA series) for playback of the alignment tape.
- (2) Connect the RF OUT jack of the playback VCR to the RF IN jack of the VCR to be adjusted.
- (3) Connect the output of the VCR to be adjusted to the monitor TV.
- (4) Set the VCR to be adjusted to channel 03 and receive the RF signal from the playback VCR (without loading a cassette).

### 8-2. CA adjustment

#### Adjustment procedure

- 1) Holding the TRACKING ▲ and ▼ buttons of the remote control simultaneously, press the STOP button on the VCR to be adjusted in order to set to TEST MODE 1.
- 2) Insert a CA/MA alignment tape into the playback VCR and perform automatic playback.
- 3) Observing the monitor TV screen, press the PLAY button on the VCR to be adjusted during playback of black burst signal, after "20" is displayed on the screen.
- 4) The adjustment value is stored in the EEPROM and "COMPLETE" is displayed on the OSD.

#### Operation check

- 1) Play back the alignment tape and make sure that "VIDEO EVENT DETECT" and "AUDIO EVENT DETECT" appear in the burst signal section after "10", "12", "14", "16" and "18" are displayed on the screen.
- 2) Ensure that the messages shown in item 1) do not appear in the black burst signal section after "22", "24" and "26" appear.
- 4) If any defect is found, perform readjustment.

## CMA Circuit Adjustments

## 8-3. MA adjustment

## Adjustment procedure

- 1) Insert a CA/MA alignment tape into the playback VCR and play it back.
- 2) Holding the TRACKING ▲ and ▼ buttons of the remote control simultaneously, press the STOP button on the VCR to be adjusted in order to set to TEST MODE 1.
- 3) Observing the monitor TV screen, press the REC button on the VCR to be adjusted during playback of black burst signal, after "14" is displayed on the screen.
- 4) The adjustment value is stored in the EEPROM and "COMPLETE" is displayed on the OSD.

## Operation check

- 1) Supply power and play back the alignment tape.
- 2) Press the MA SKIP button of the remote control to select "2".
- 3) Observing the monitor TV screen, make sure that the PREVIEW operation starts when "12" or "14" is displayed.
- 4) If any defect is found, perform readjustment.

## 9. List of Data in EEPROM and Initial Settings

The table below lists the data stored in ROM. It also shows the data set by shipment mode initialization and when the trouble display is cleared.

Information	Data memory ROM	List of initial data	
	IC903 VCR EEPROM	Shipment mode initial data	Clearing of trouble display
Tuned channel data	Yes	Yes	No
Auto clock channel data	Yes	Yes	No
VCR mode select data	Yes	Yes	No
Cable box type	Yes	Yes	No
Trouble display data	Yes	Yes	Yes
Slow tracking data	Yes	No (set by adjust)	No
Artificial V sync data	Yes	No (set by adjust)	No
Switching point data	Yes	No (set by adjust)	No
Movie advance data	Yes	No (set by adjust)	No
CM advance data	Yes (UX627A only)	No (set by adjust)	No

## 10. List of Hidden Commands

The following tables list the mode setting commands during adjustment and EEPROM initial setting commands.

## 10-1. Mode setting commands during adjustment

Item	Mode in which command is accepted	Operation	Remarks
Tracking center	Play	Press the "TRACKING △" and "▽" buttons on the VCR or the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control simultaneously.	
X-value adjustment test mode	Play	Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control simultaneously and press the "CHANNEL ▽" button on the VCR.	"tEST" appears
Forward test slow mode	Play	Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control simultaneously and press the "PLAY" button on the VCR.	"SLOW" appears
Reverse test slow mode	Still play	Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control simultaneously and press the "PLAY" button on the VCR.	"-SLOW" appears
Test mode 1	Stop	Press the "TRACKING ▲" and "TRACKING ▼" buttons of the remote control simultaneously and press the "STOP" button on the VCR.	

## 10-2. EEPROM initialization commands

Item	Mode in which command is accepted	Operation	Remarks
Shipment mode initial setting	EJECT	Press the "REC" button on the VCR and hold it, then press the "RESET" button used to initialize the microprocessor.	Hold the "REC" button depressed and release it after the display lights.
Clearing of trouble display	—	Press the "PLAY" button on the VCR and hold it, then press the "RESET" button used to initialize the microprocessor.	Hold the "PLAY" button depressed and release it after the display lights.

## 11. Initial Settings of IC903 (EEPROM)

The following shows the on-screen display and modes of switches when IC903 (EEPROM) is initialized.

### [A] VCR SETUP MENU (in menu)

- |               |           |
|---------------|-----------|
| 1 AUTO BLUE   | [ ON ]    |
| 4 AUDIO SETUP | [Hi-Fi]   |
| 5 AUDIO SETUP | [STEREO]  |
| 6 AUDIO SETUP | [SAP OFF] |

### [B] CLOCK SET (in menu)

- |             |        |

|-----------------|------|
| Recording speed | : EP |
|-----------------|------|

### [F] Front panel switch

- |          |           |
|----------|-----------|
| ANT. OUT | : RFCH 03 |
|----------|-----------|

## 12. Caution When Replacing IC903 (VCR EEPROM)

After replacing IC903 (VCR EEPROM), execute the VCR initial settings and then perform the following adjustments.

	Adjustment	Page
1	Vertical jitter adjustment	P3-5
2	Forward slow tracking adjustment	P3-5
3	Reverse slow tracking adjustment	P3-5

# CHAPTER 6

## SCHEMATIC, CIRCUIT BOARD AND BLOCK DIAGRAMS/ MICROPROCESSOR PIN FUNCTION TABLE

### Cautions when using schematic diagrams

#### Caution for safety

The parts marked  are critical for safety. Be sure to use the specified parts to ensure safety when replacing them.

#### 1. Values in schematic diagrams

The values, dielectric strength (power capacitance) and tolerances of the resistors (excluding variable resistors) and capacitors are indicated in the schematic diagrams using abbreviations.

#### [Resistors]

Item	Indication
Value	No indication ..... $\Omega$ K ..... $k\Omega$ M ..... $M\Omega$
Tolerance	No indication ..... $\pm 5\%$ (All tolerances other than $\pm 5\%$ are indicated in the schematic diagrams)
Power capacitance	No indication ..... 1/8W (1/16W for leadless resistors without indication) All capacitances other than the above are indicated in the schematic diagrams.

#### [Capacitors]

Item	Indication
Value	No indication ..... $\mu F$ P ..... pF
Dielectric strength	No indication ..... 50V (All dielectric strengths other than 50V are indicated in the schematic diagrams.)

#### [Coils]

Item	Indication
Value	$\mu$ ..... $\mu H$ m ..... mH

#### 2. Markings in schematic diagrams

- 1) Parts marked "■" with circuit numbers in the schematic diagrams are discrete parts.
- 2) Parts marked "●" with circuit numbers in the schematic diagrams are leadless parts.

### Cautions when using circuit board diagrams

#### 1. Identifications of sides A/B in circuit board diagrams

- 1) Board having a pattern on one side and parts on both sides.  
Side A: Shows discrete parts, viewed from the pattern side.  
Side B: Shows leadless parts, viewed from the pattern side.
- 2) Board having patterns on both sides and parts on both sides.  
Side A: Shows parts and patterns which can be seen when the case is opened.  
Side B: Shows parts and the pattern on the back of side A.

#### 2. Table for indexing locations of parts

This table shows locations of each part on the circuit board diagrams. The locations are indicated using the guide scales on the external lines of diagrams.

##### 1) In case of one-layer board

Symbol No.	Part Location
IC2101	2 A

Sort of parts

Zone "A" on board diagram

Zone "2" on board diagram

Circuit No.

##### 2) In case of side A/B indication board

Symbol No.	Part Location
Q1201	A - 2 A

Sort of parts

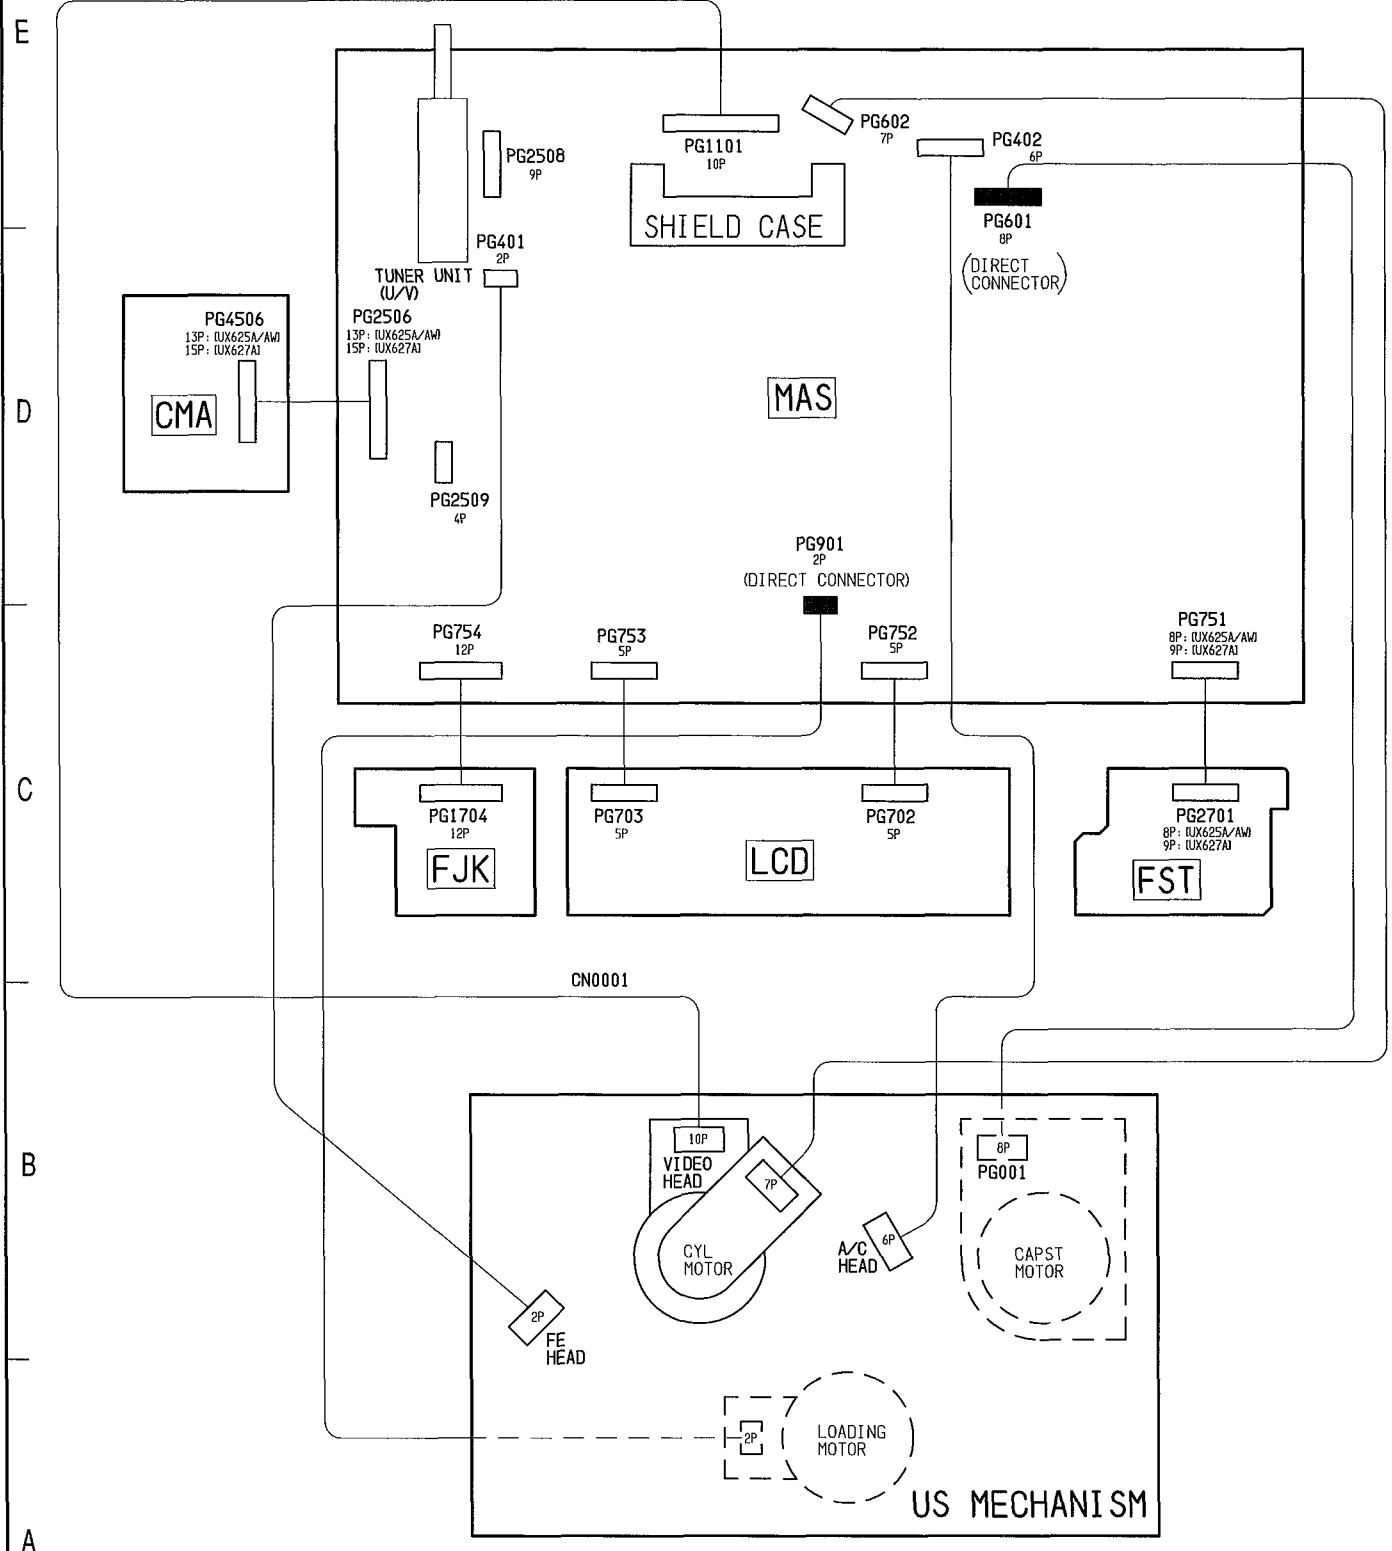

Zone "A" on board diagram

Zone "2" on board diagram

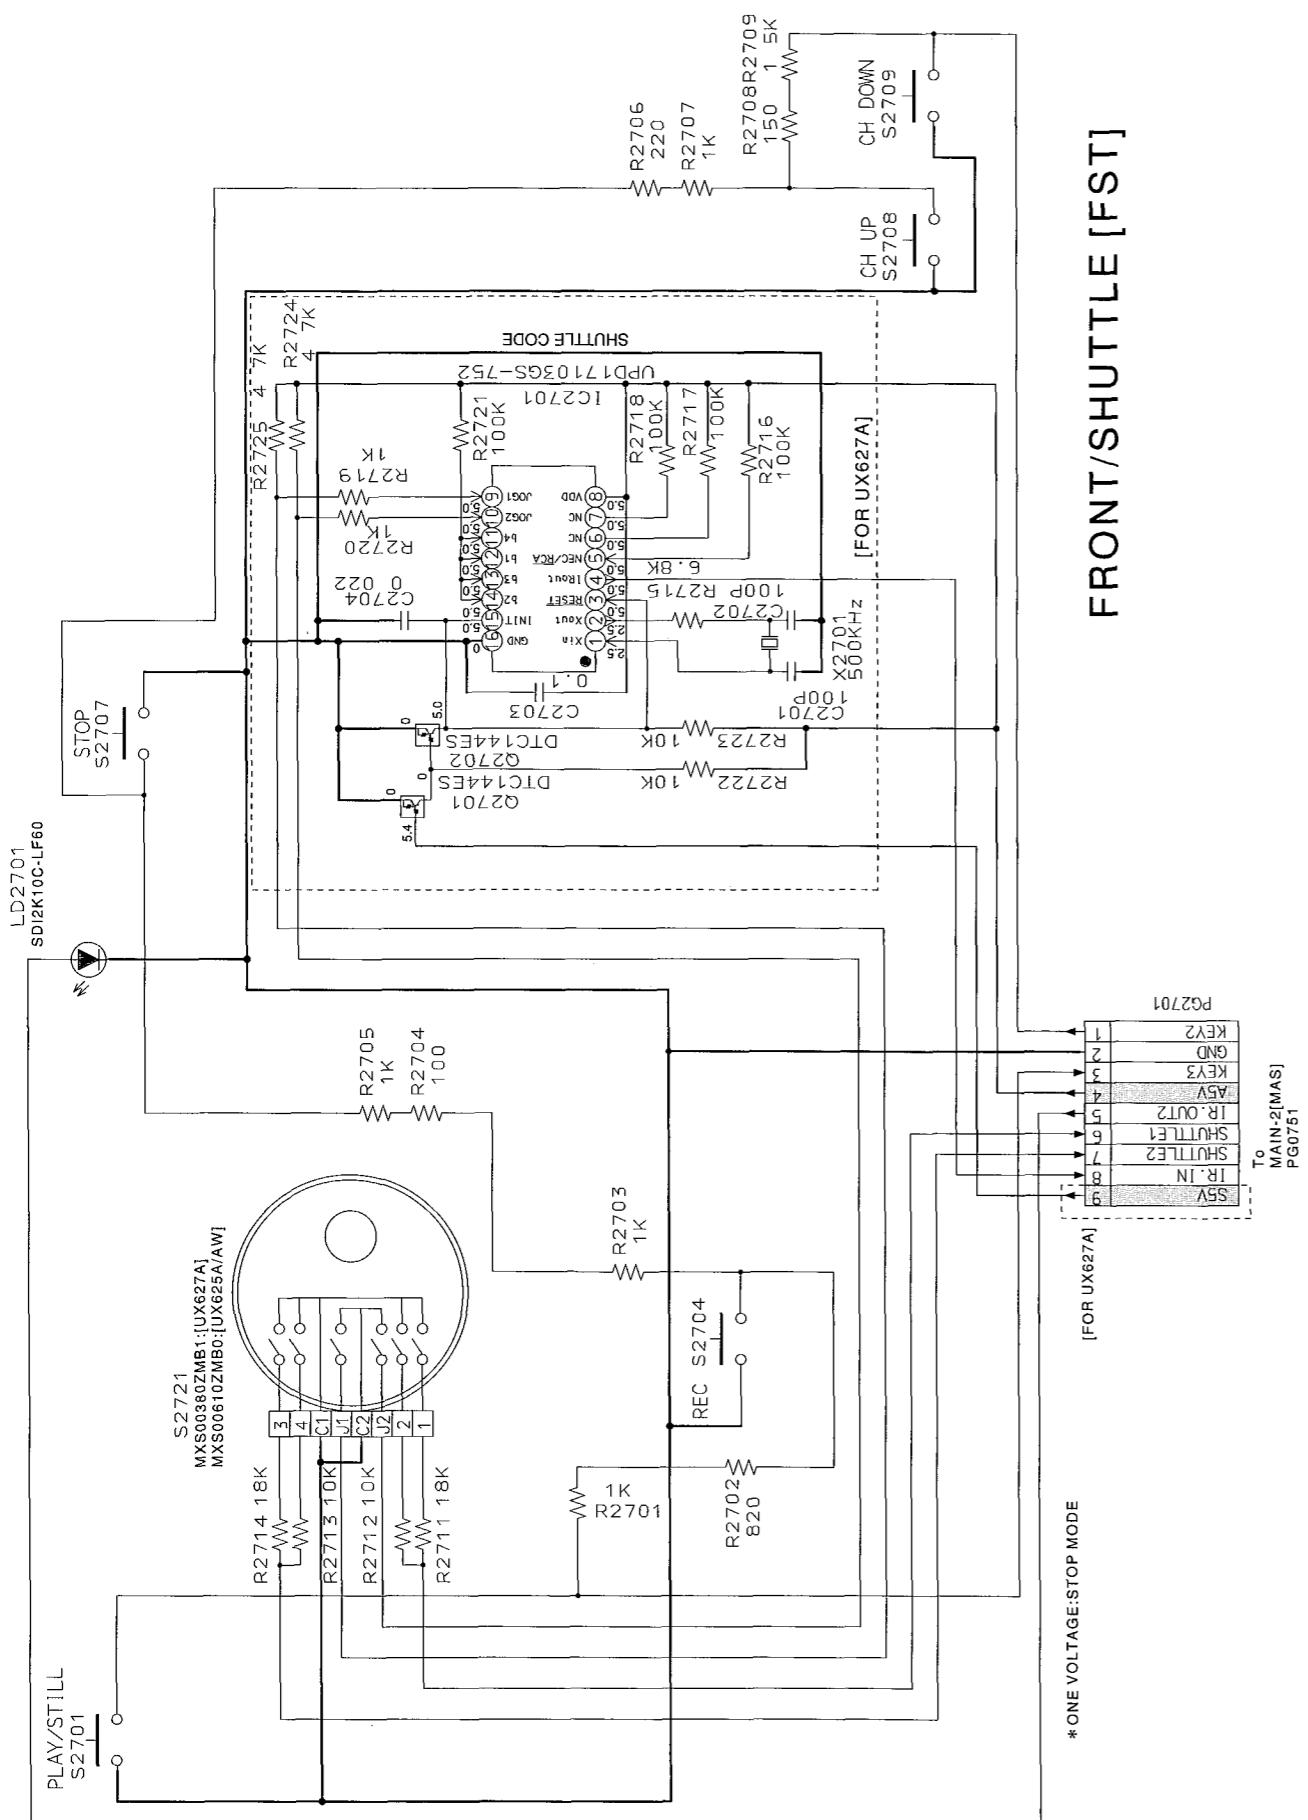

Circuit No.

A: Shows side A  
B: Shows side B

# BLOCK DIAGRAMS

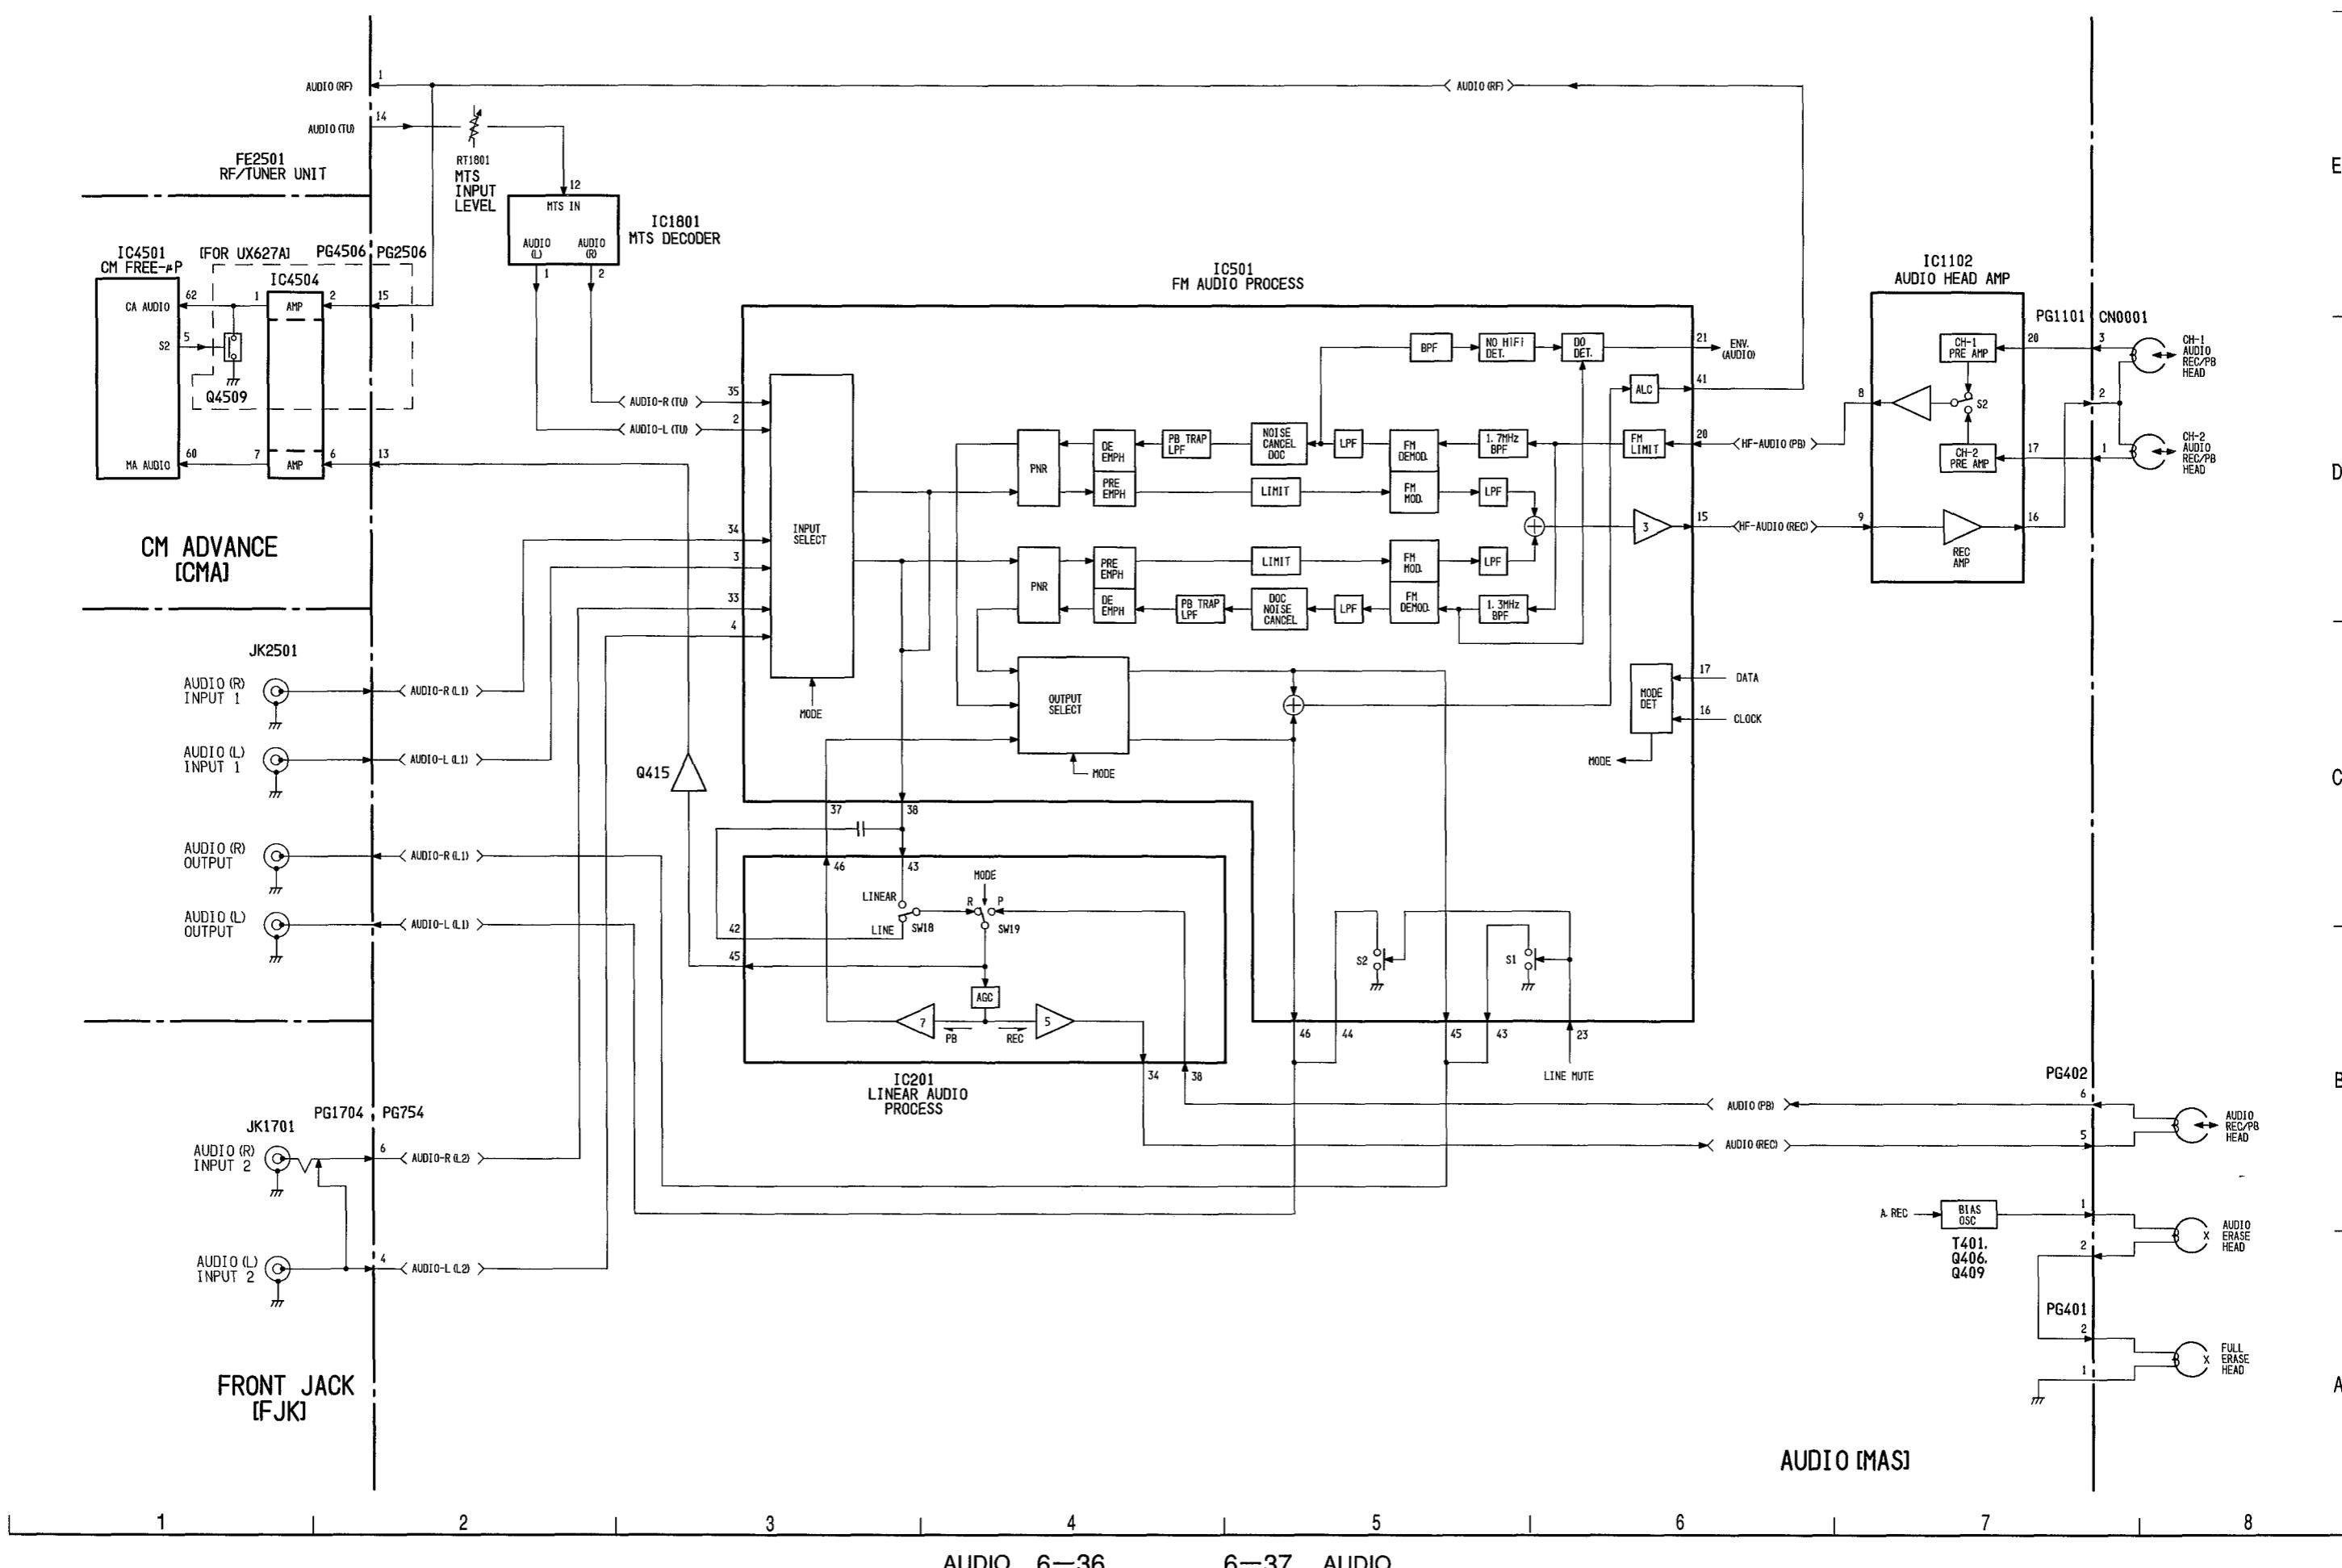

## 1. SYSTEM CONTROL

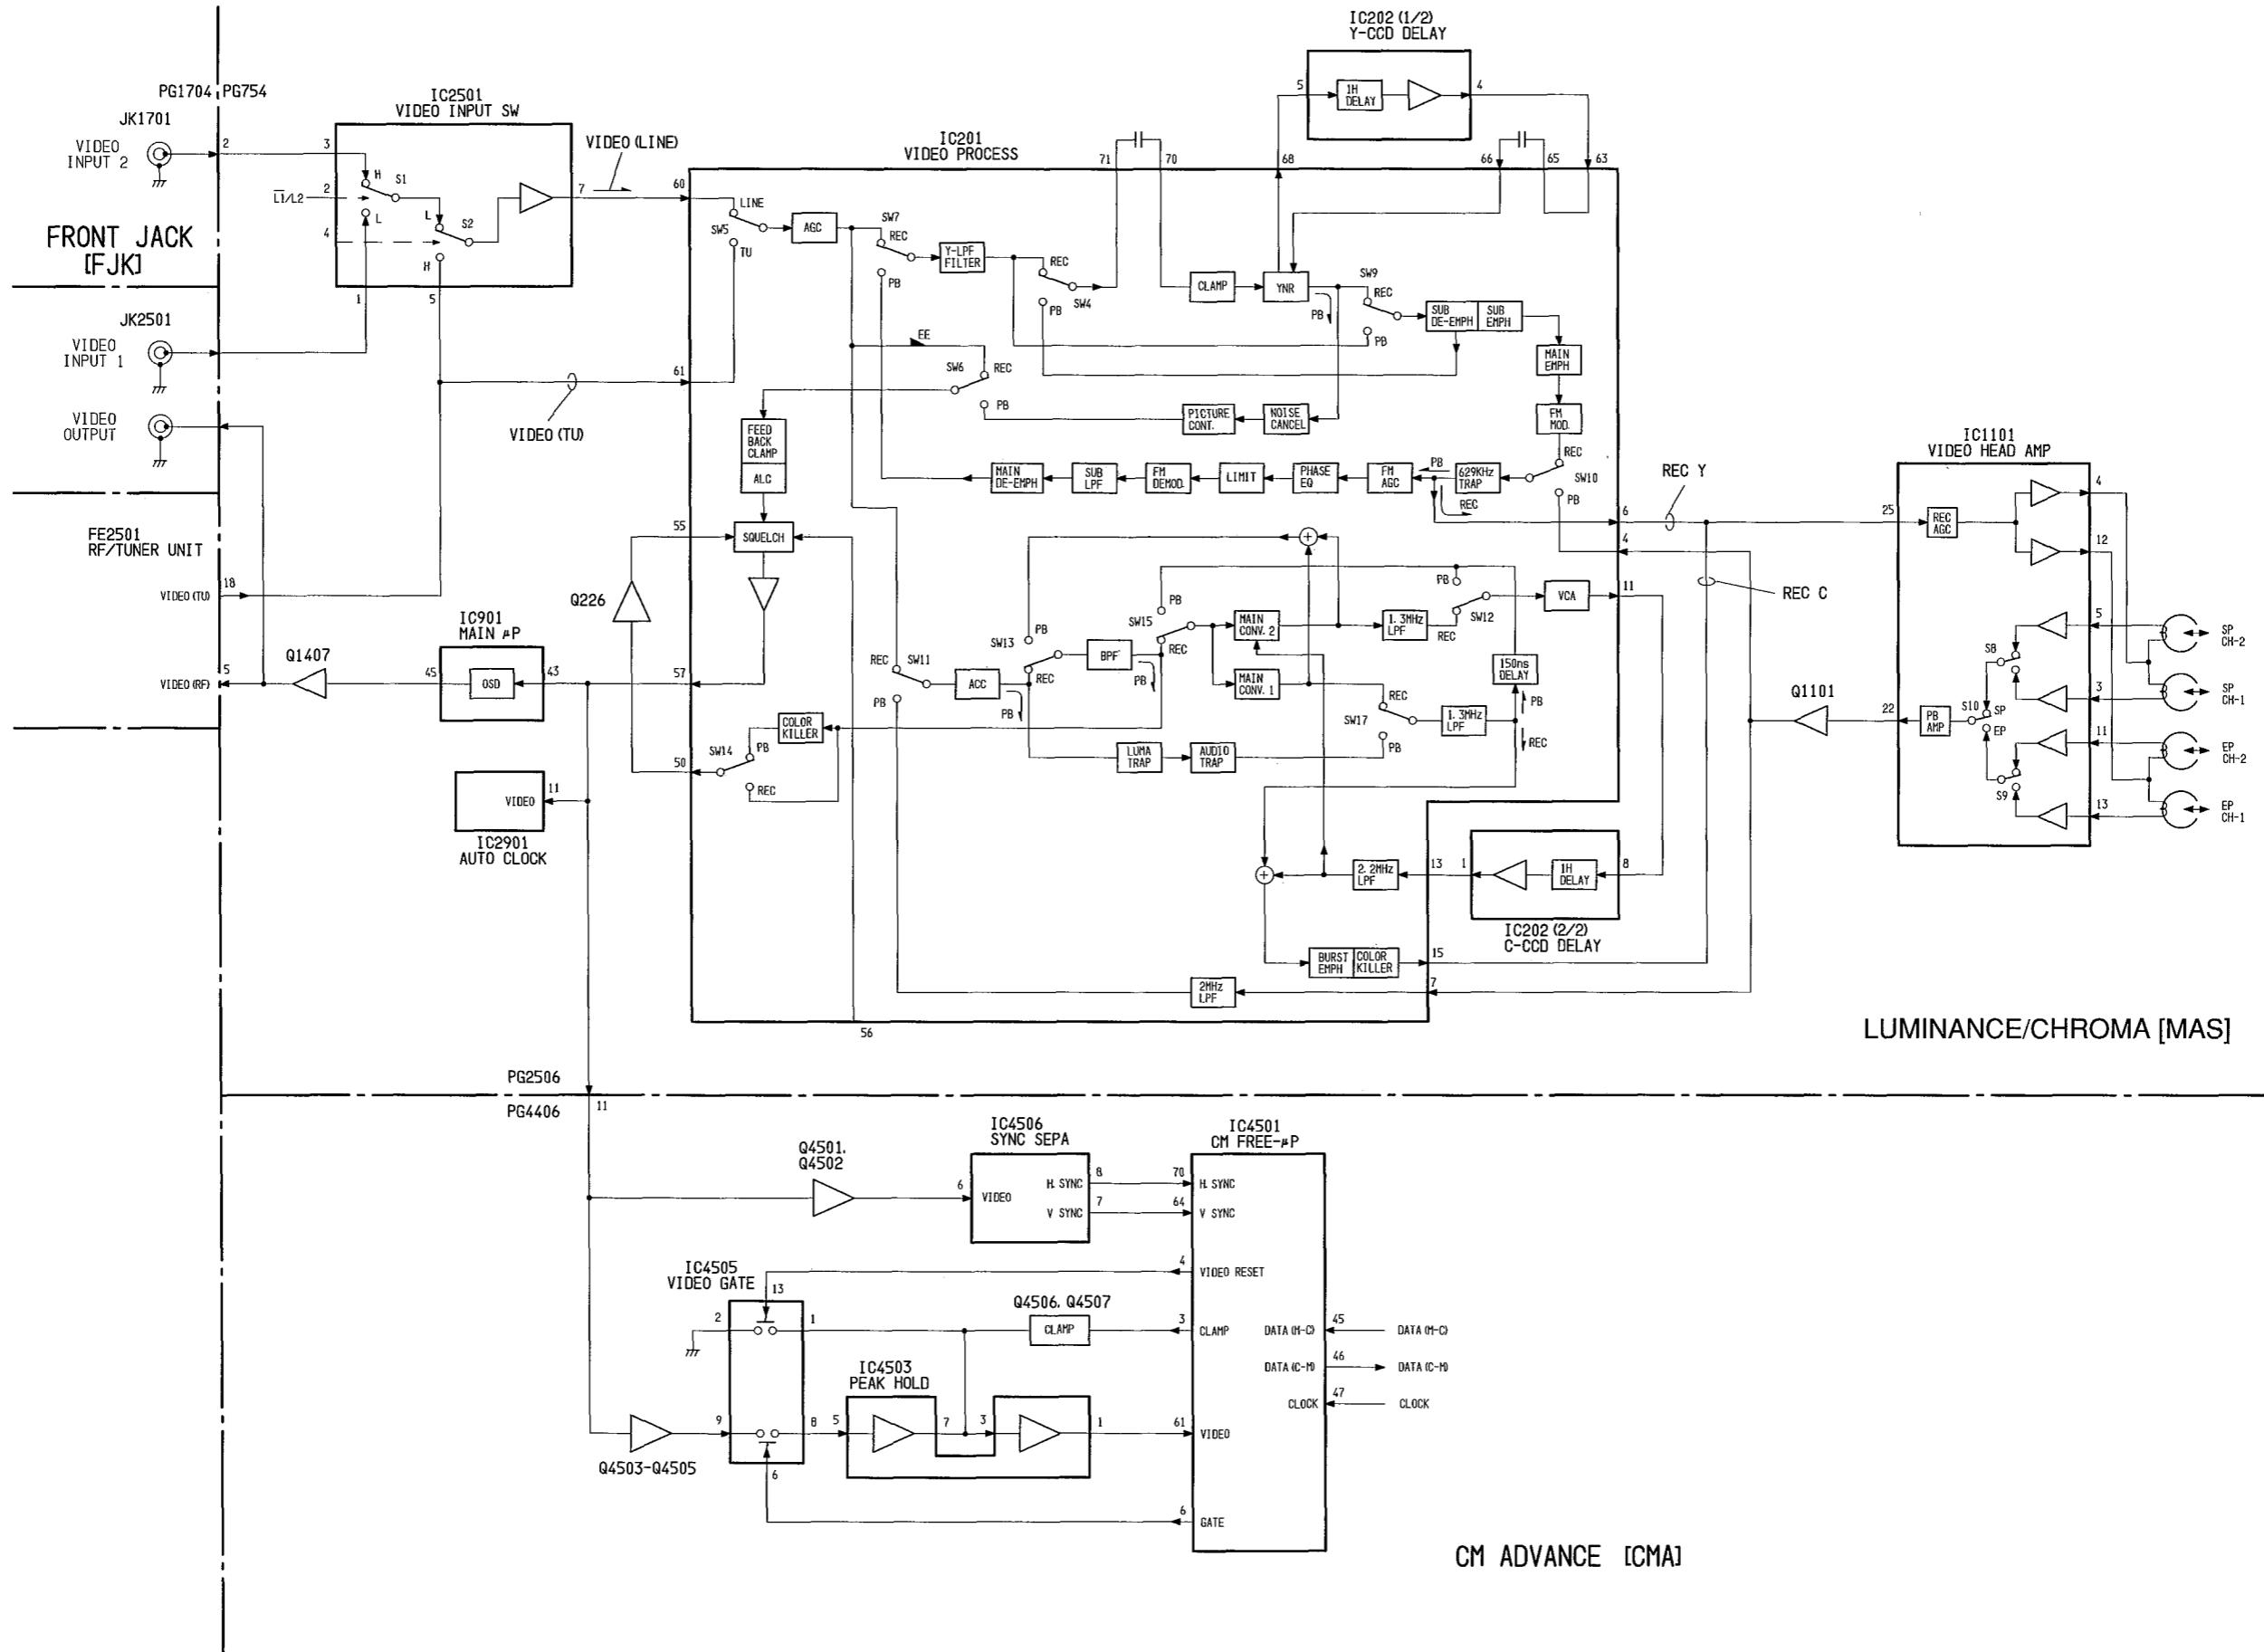

## 2.SERVO

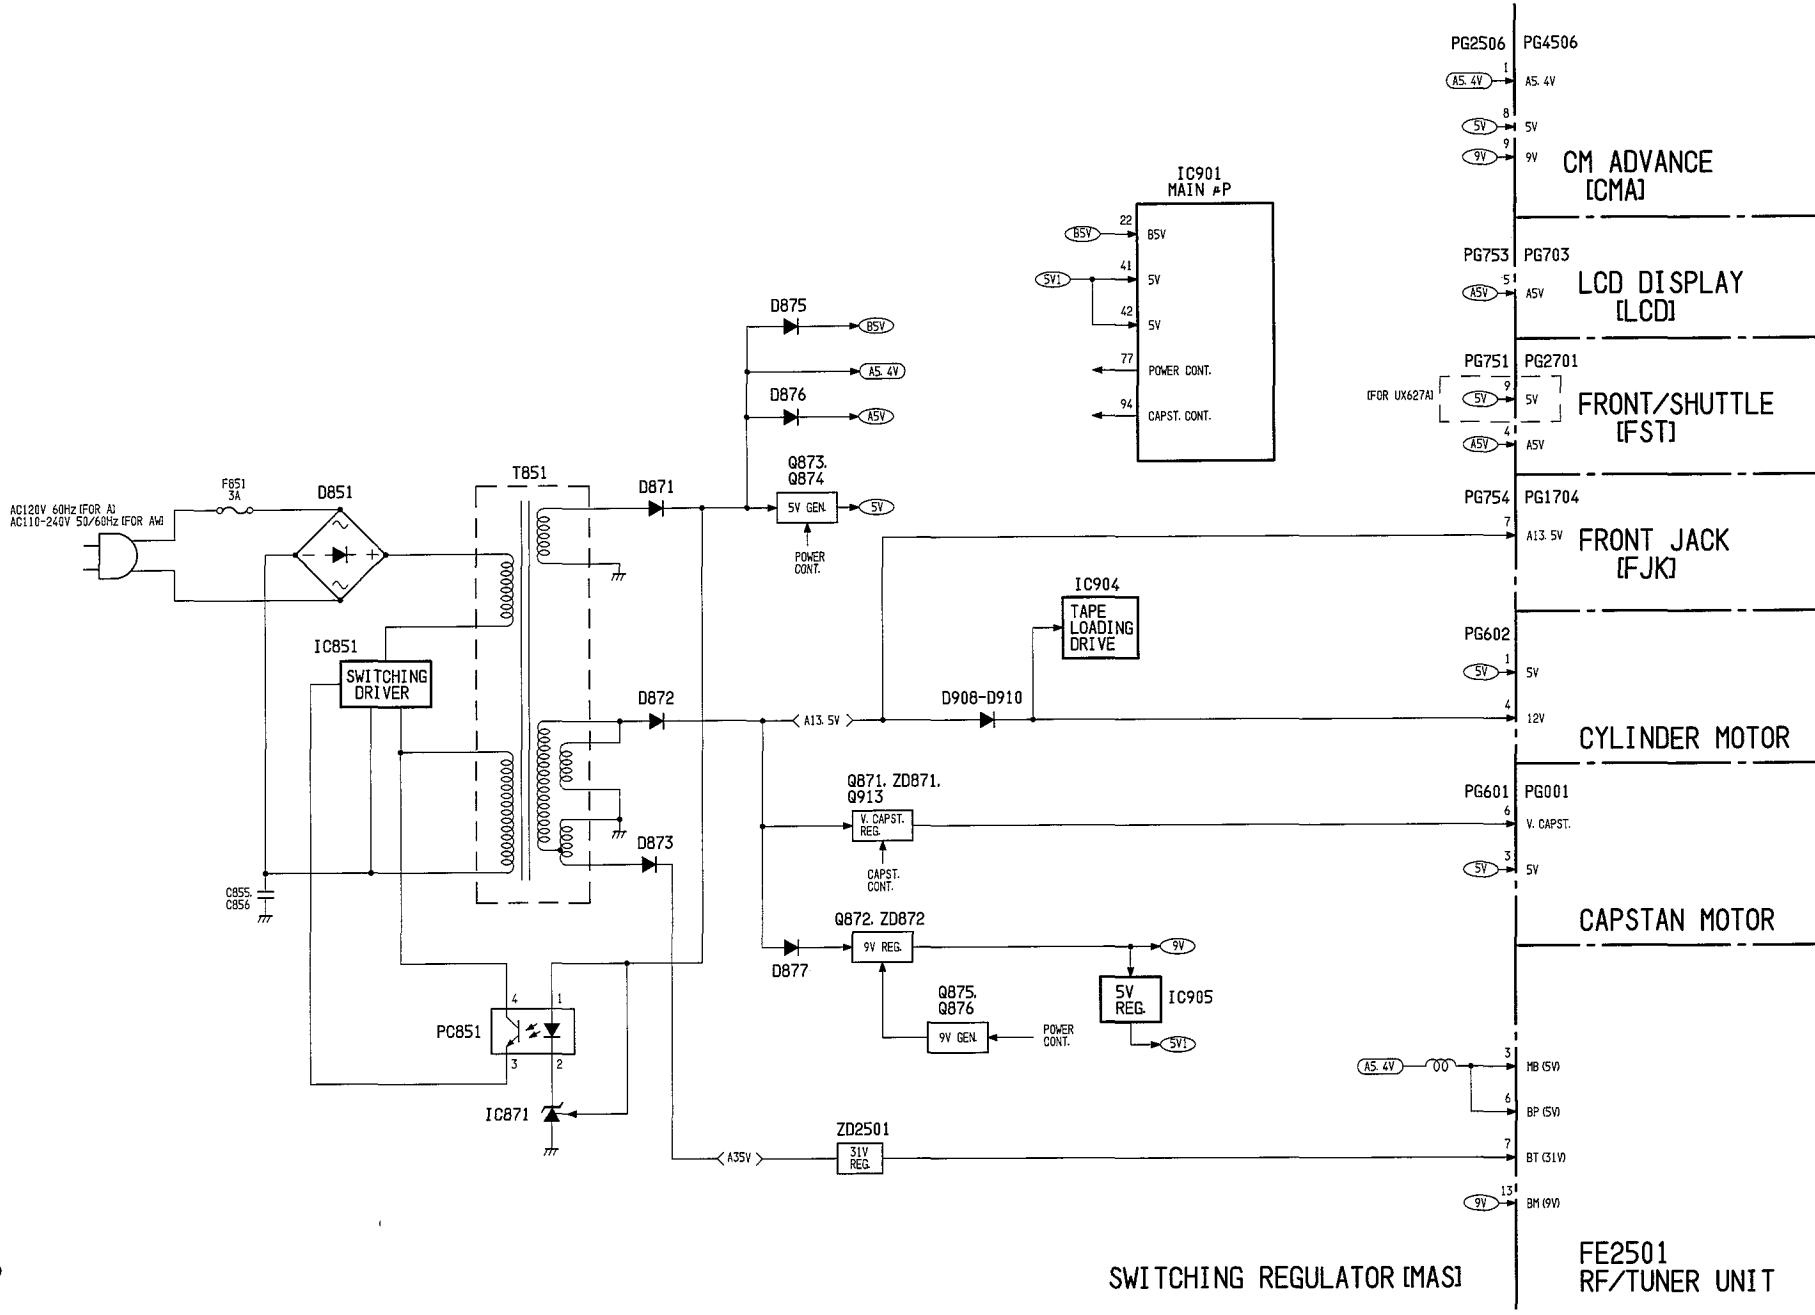

### 3.AUDIO

## 4. VIDEO

## 5. REGULATOR

## ◆ Microprocessor Pin Function Tables

### 1. LCD DRIVER (IC701)

Pin No.	I/O	Active Level	Abbreviation	Function
1	O	Pulse	SEGMENT 1 [S1]	LCD segment control outputs.
2	O	Pulse	SEGMENT 2 [S2]	
31	O	Pulse	SEGMENT 31 [S31]	
32	O	Pulse	SEGMENT 32 [S32]	
33	O	Pulse	COM1	LCD common (COM) control outputs.
34	O	Pulse	COM2	
35	O	Pulse	COM3	
36	I	Lo	RESET(L)	Initializes the LCD-uP when power is supplied.
37	I	Hi	VDD	A5V power input.
38	I	-	VDD 1	LCD drive bias.
39	I	-	VDD 2	LCD drive bias.
40	-	Lo	VSS	Ground.
41	I/O	-	OSC	Generates a 32kHz signal for key scanning.
42	I	Lo	LCD. LOAD (L) [CS]	LOAD signal between the M-uP and LCD-uP. "Lo" input enables chip select.
43	I	Pulse	CLOCK (M-LCD) [CK]	The data transferred from the M-uP, synchronized with the clock signal.
44	I	Pulse	DATA (M-LCD) [DI]	

## 2. MAIN uP (IC901)

Pin No.	I/O	Active Level	Abbreviation	Function																											
1	O	Hi	BACKLIGHT	LCD backlight switching signal.																											
2	-	-	GND	Ground.																											
3	I	A/D	SHUTTLE 2	Inputs from the shuttle dial switches. The shuttle speed and direction are determined.																											
4	I	A/D	SHUTTLE 1																												
5	I	A/D	KEY IN	Key matrix input.																											
6	I	A/D	FL/TAB	Cassette position/erase prevention tab detection input. Hi: TAB SW OFF (with tab), Mid: TAB SW ON (without tab), Lo: When cassette is being inserted/ejected. When a cassette without its erase prevention tab is inserted, recording is inhibited, and when the timer is programmed, it is ejected automatically.																											
7	I	Lo	P. STOP(L)	When A5V voltage drops and "Lo" is input, the M-uP detects that a power failure has occurred.																											
8	I	Hi	S-CURVE	Detects the AFT (S-CURVE) signal from the IF unit to fine tune to a station.																											
9	I	A/D	MODE 2	The signals which detect the mechanism state are input to control the loading motor.																											
10	I	A/D	MODE 1	<table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <th>Pin</th><th>EJECT</th><th>UNLOAD</th><th>REV.</th><th>R SLOW</th><th>SLOW</th><th>R/P</th><th>STOP2</th><th>FF/REW</th></tr> <tr> <td>13</td><td>0</td><td>2.5</td><td>1.8</td><td>2.5</td><td>3.05</td><td>3.05</td><td>2.5</td><td>0</td></tr> <tr> <td>14</td><td>1.8</td><td>3.05</td><td>0</td><td>0</td><td>0</td><td>1.8</td><td>2.5</td><td>3.05</td></tr> </table>	Pin	EJECT	UNLOAD	REV.	R SLOW	SLOW	R/P	STOP2	FF/REW	13	0	2.5	1.8	2.5	3.05	3.05	2.5	0	14	1.8	3.05	0	0	0	1.8	2.5	3.05
Pin	EJECT	UNLOAD	REV.	R SLOW	SLOW	R/P	STOP2	FF/REW																							
13	0	2.5	1.8	2.5	3.05	3.05	2.5	0																							
14	1.8	3.05	0	0	0	1.8	2.5	3.05																							
11	I	A/D	VIDEO ENV.	Audio and video envelope level inputs for autotracking.																											
12	I	A/D	AUDIO ENV.																												
13	I	A/D	MODEL SW	Model switching control.																											
14	I	H/MH/ ML/L	MTS MODE	Lo: Stereo + SAP signal input, Mid low: Mono + SAP signal inout, Mid high: Stereo signal input, Hi: Mono signal input.																											
15	I	-	A5V	Connected to A5V.																											
16	I	Lo	RESET (L)	Initializes the M-uP when power is supplied.																											
17	O	H/L	V.CAP 1	See page 6-44.																											
18	O	Hi	EDS CE	LOAD signal between the M-uP and AUTO CLOCK IC.																											
19	O	Lo/Hi	L1(Lo)/L2	L1/L2 switching control signal output.																											
20	O	Lo/Hi	CONV.CH-3/CH-4	CH-3/CH-4 switching control signal output.																											
21	O	Hi/Lo	TV(Lo)/VCR	RF converter (VCR/TV switching) control signal output.																											
22	I	-	B5V	Connected to B5V.																											
23	O	Pulse	SW30Hz-A	Head switching pulse output for audio circuits.																											
24	O	Pulse	SW30Hz	Head switching pulse output.																											
25	O	PWM	CAPST. PWM	Cylinder and capstan motor servo control outputs.																											
26	O	PWM	DRUM. PWM																												
27	O	Hi	V.PULSE	Artificial V sync signal for trick play.																											
28	O	Pulse	C.ROTARY	Chroma rotation control signal.																											
29	O	Hi/Lo	H.AMP SW	SP/EP head switching control signal (pulse during trick play).																											
30	I	Hi/Lo	COMP	SP/EP head switching control signal (pulse during trick play).																											
31	I/O	Pulse	CTL (+)	CTL signal input/output.																											
32	I/O	Pulse	CTL (-)																												
33	-	-	GND	Ground.																											
34	I	Pulse	CTL AMP 1	CTL amp inputs.																											
35	I	Pulse	CTL AMP 2																												
36	I	Pulse	CTL AMP 3																												
37	O	Pulse	CTL AMP(O)	CTL amp outputs.																											
38	I	Pulse	DRUM.FG	Cylinder FG (CYL.FG) pulse input. Controls the cylinder speed during recording and playback.																											
39	I	Pulse	TACH PULSE [DRUM.PG]	Tach pluse input. Comparison(feedback) signal which controls the recording cylinder phase.																											

Pin No.	I/O	Active Level	Abbreviation	Function
40	I	Pulse	CAPST.FG	Capstan FG (CAPST.FG) pulse input. Used to control the capstan motor.
41	I	-	S5V (SRV)	Connected to 5V.
42	I	-	S5V (OSD)	Connected to 5V.
43	I	-	C.VIDEO IN	Video signal input.
44	O	-	V.REF	Reference voltage of analog circuits.
45	O	-	C.VIDEO OUT	Video signal output.
46	-	-	CHARA. BIAS	Not used.
47	-	-	AFC LPF	An LPF is attached externally for AFC.
48	-	-	AFC OSC	Oscillator for AFC.
49	-	-	GND	Ground.
50	I	Pulse	DOSC IN	OSD dot clock oscillator.
51	O	Pulse	DOSC OUT	
52	O	-	2 fsc (7.16MHz)	These generate a 7.16MHz signal as the clock signal for the OSD and servo circuit.
53	I	-	2 fsc (7.16MHz)	
54	I	Pulse	C.SYNC	Composite sync signal input. Controls the cylinder speed during recording.
55	O	Hi	BLUE BACK	Blue background control signal output.
56	O	Hi	HF REC MUTE	Hi-Fi audio muting control output during recording.
57	O	Pulse	SSB DATA	Common communication lines with VIDEO/LINEAR AUD. ICs; data is transferred, synchronized with the clock signal.
58	O	Pulse	SSB CLOCK	
59	O	Lo	PB(L)	Sets the video/audio circuits to the playback mode.
60	O	Hi	REVERSE	Sets the drive direction of the capstan motor to reverse.
61	O	Hi	AUDIO REC	Sets the audio circuit to the recording mode.
62	I	Pulse	CTL RESET	Applies reset pulses to the CTL amp during slow and reverse slow play.
63	O	Hi	LM CONT.	Signal to control the voltage applied to the loading motor when forward slow is switched to reverse slow and vice versa.
64	O	Pulse	IR OUT	Signal output to the cable and DSS box control circuit.
65	O	Hi	UNLOAD [LM2]	Loading motor drive signals which set the mechanism to the commanded mode.
66	O	Hi	LOAD [LM1]	
67	O	Hi	REC	REC indi. control. REC;Hi
68	-	-	TEST	Ground
69	I	-	X 2(32kHz)	These generate a 32.768kHz signal as the clock signal for the VCR's clock.
70	O	-	X 1(32kHz)	
71	-	-	Vss	Ground
72	I	-	OSC 1(10MHz)	These generate a 10MHz signal as the system clock signal in modes other than back-up.
73	O	-	OSC 2(10MHz)	
74	O	Hi	LINE MUTE	Audio output muting control.
75	O	Hi/Lo	CAPST. Q.R	Cylinder and capstan motor phase control outputs.
76	O	Hi/Lo	DRUM Q.R	
77	O	Hi	POWER CONT	Power on/off control. When the power switch is operated, a cassette is inserted or a power failure is detected, the internal power supply is switched to be on/off.
78	O	Lo	SP(L)	Tape speed output.
79	O	Hi	V.REC MUTE	Video signal record muting control. Prevents the signal from being supplied to the video heads.
80	O	Hi	REC	Sets the video and audio head amp circuits to the recording mode. Tuner audio muting control.
81	O	Hi	MTS MUTE	Tuner audio muting control.
82	I	Pulse	IR PULSE	Receives the remote control code from the infrared receiver and sets the VCR to the specified mode.
83	O	Hi	MONO OUT	Output to control the MTS decoder output mode to mono.
84	O	Lo	C.CE	LOAD signal between the M-up and Commercial advance-up.

Pin No.	I/O	Active Level	Abbreviation	Function												
85	I	Pulse	LINE21	EDS LINE 21H pulse input.												
86	I	Lo	REW END (L) [EST]	When "Lo" is input from the mechanism sensor, the current mode is released. Two sensors detect the two ends of tape. When "Lo" is input from both sensors, the M-uP detects that a cassette is not loaded in the VCR.												
87	I	Lo	FWD END (L) [ESS]													
88	I	Pulse	T.REEL	Calculates the period of the take-up reel pulse to detect whether or not slack tape is taken up on the reel. If slack tape is not taken up, the M-uP stops the mechanism. The supply reel pulses are used with the take-up reel pulses to calculate the tape remaining time.												
89	I	Pulse	S.REEL													
90	I	Lo	CHECK	Checks short-circuits in the 5V/9V power supplies. (This pin goes "Lo" normally when power is off.)												
91	O	Hi	ST/SAP OUT	Output to control the MTS decoder so it is set to the SAP mode.												
92	I/O	Pulse	I2C DATA	Common communications lines with the ROM/Hi-Fi AUD/UV-Tuner, data is communicated, synchronized with the clock signal.												
93	O	Pulse	I2C CLOCK													
17	O	H/L	V.CAPST 1	This is output in the slow, still, playback, recording, fast forward and rewind modes to control the voltage applied to the capstan motor.												
94	O	H/L	V.CAPST 2													
				<table border="1"> <tr> <td>Pin 17 V.CAP1</td><td>Pin 94 V.CAP2</td><td>VOLT.</td></tr> <tr> <td>Hi</td><td>Hi</td><td>7.5V</td></tr> <tr> <td>Lo</td><td>Hi</td><td>9.5V</td></tr> <tr> <td>Lo</td><td>Lo</td><td>13.5V</td></tr> </table>	Pin 17 V.CAP1	Pin 94 V.CAP2	VOLT.	Hi	Hi	7.5V	Lo	Hi	9.5V	Lo	Lo	13.5V
Pin 17 V.CAP1	Pin 94 V.CAP2	VOLT.														
Hi	Hi	7.5V														
Lo	Hi	9.5V														
Lo	Lo	13.5V														
95	O	Pulse	CLOCK	Communication lines with the Commercial advance-up/EDS IC; data is transferred, synchronized with the clock signal.												
96	O	Pulse	DATA (M-CE)													
97	I	Pulse	DATA (CE-M)	EDS caption data input. Commercial advance-uP data input.												
98	O	Pulse	LCD CLOCK	Communication lines with the LCD DRIVER; data is transferred, synchronized with the clock signal.												
100	O	Pulse	LCD DATA													
99	O	Lo	LCD CE(L)	LOAD signal between the M-uP and LCD DRIVER.												

**CHAPTER 7****TROUBLE DISPLAY AND TROUBLESHOOTING**

## ◆ Trouble Display Function

This VCR has a function which displays mechanism malfunctions, etc. in the LCD display. Use this function to analyze the cause when the power is shut off due to a malfunction, etc. in the mechanism. Two types of information are displayed, (1)The operation mode when the malfunction occurred, (2)Malfunction Codes.

The details of the malfunction are displayed as follows.

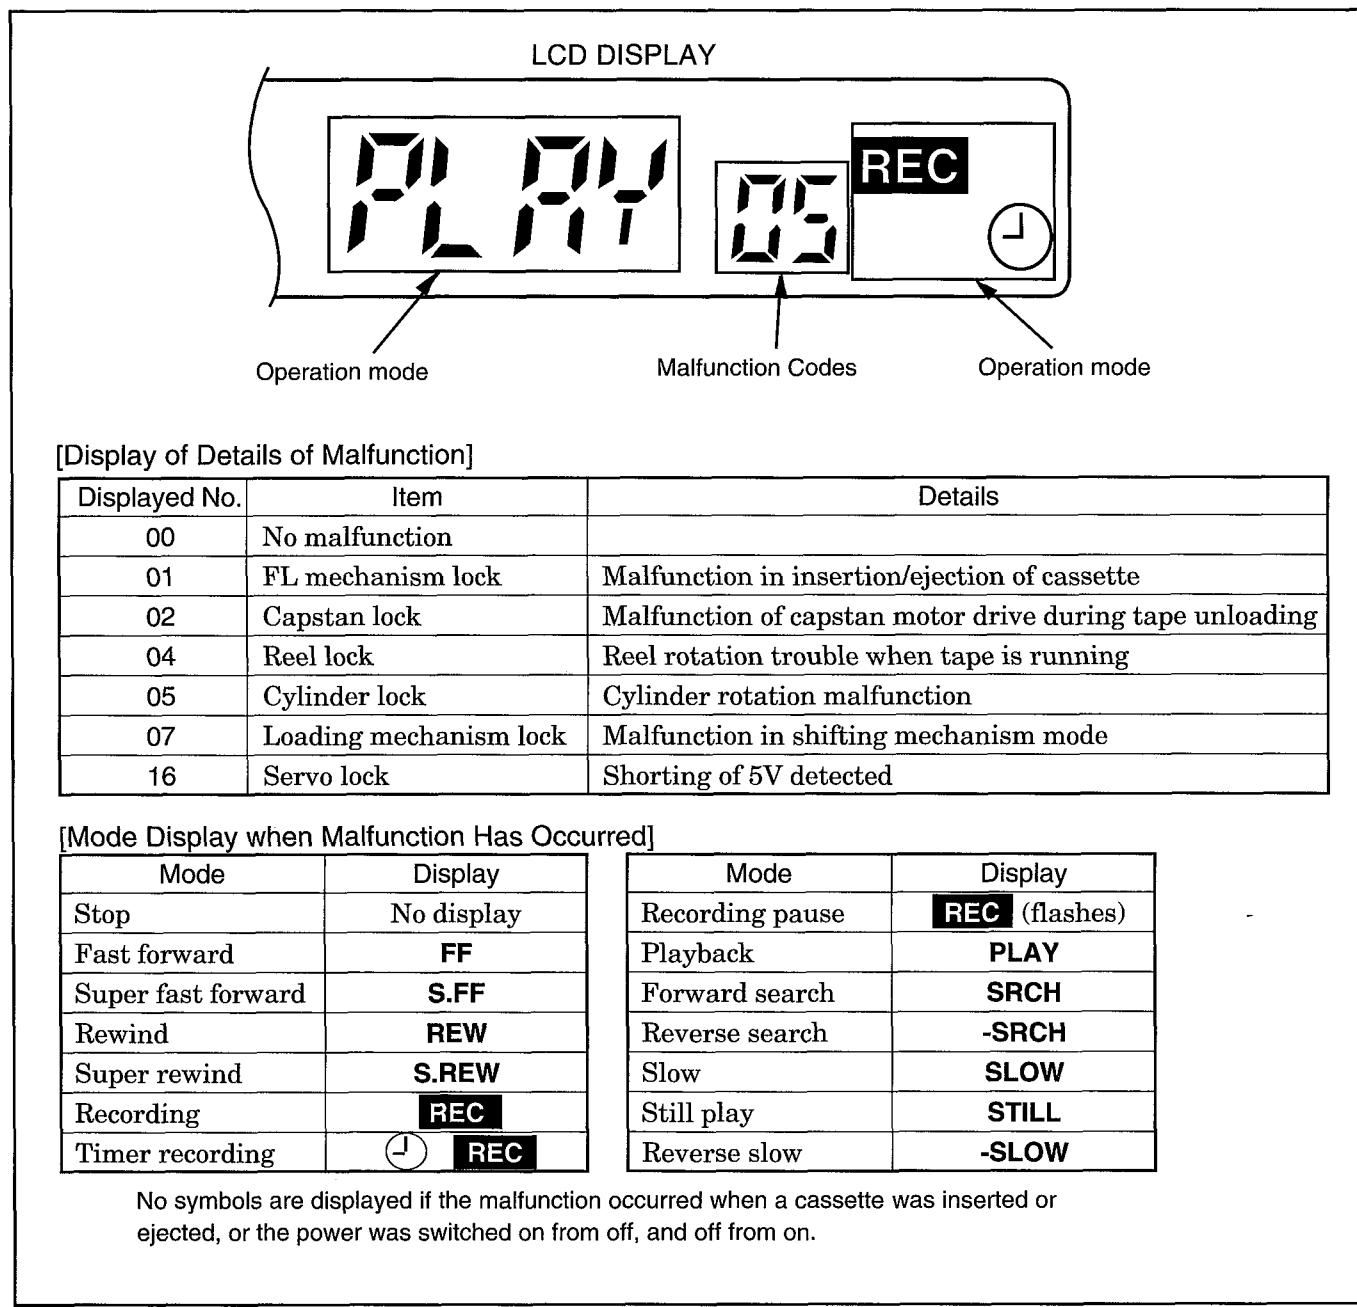

### Procedure to display a malfunction

Press the "CHANNEL ▼" button on the VCR when the power is turned off and hold it; the malfunction code is displayed while the button is held depressed.

### Procedure to clear the malfunction display

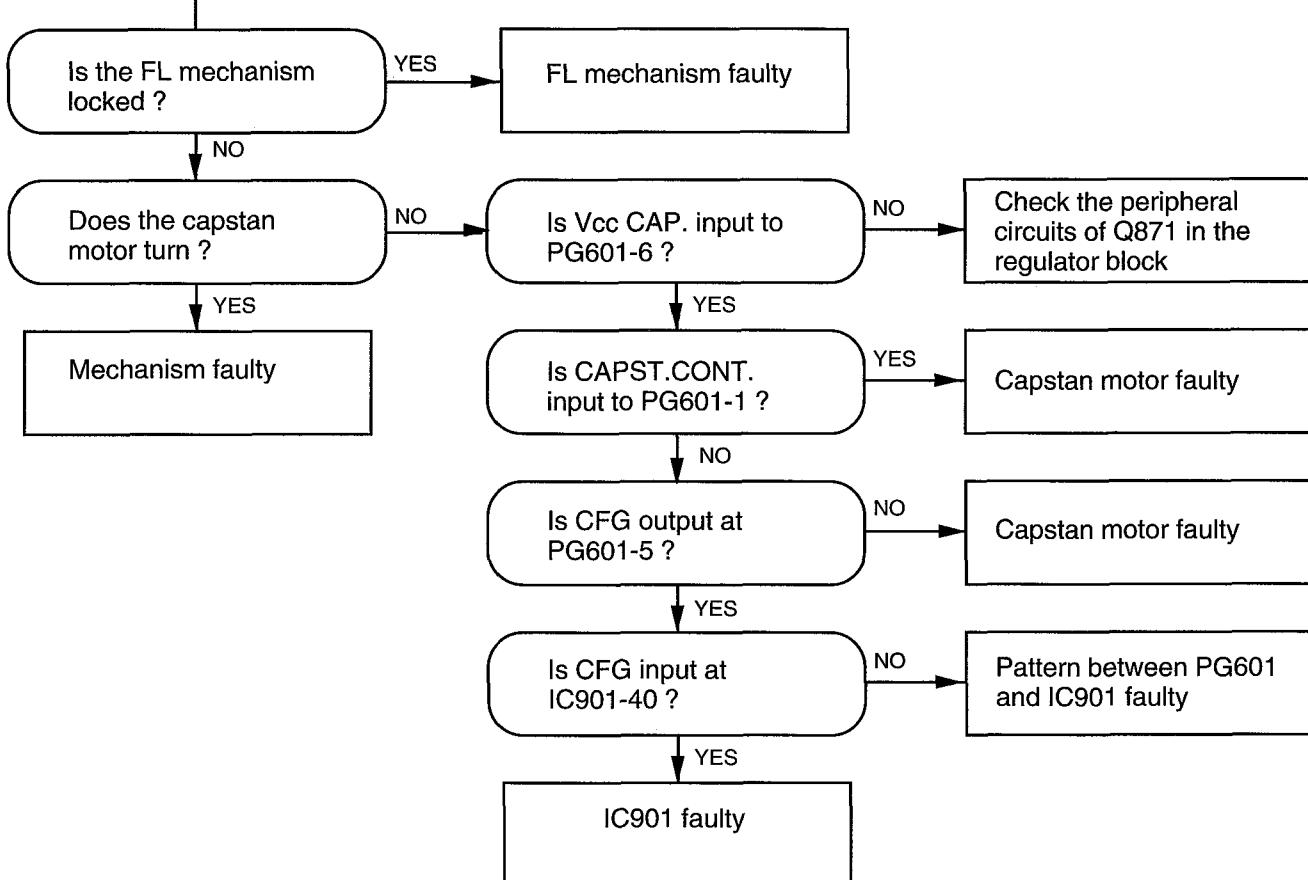

Press the "PLAY" button on the VCR and hold it, then press the microprocessor "RESET" button to initialize the trouble display.

\* Hold the "PLAY" button depressed and release it after the display lights.

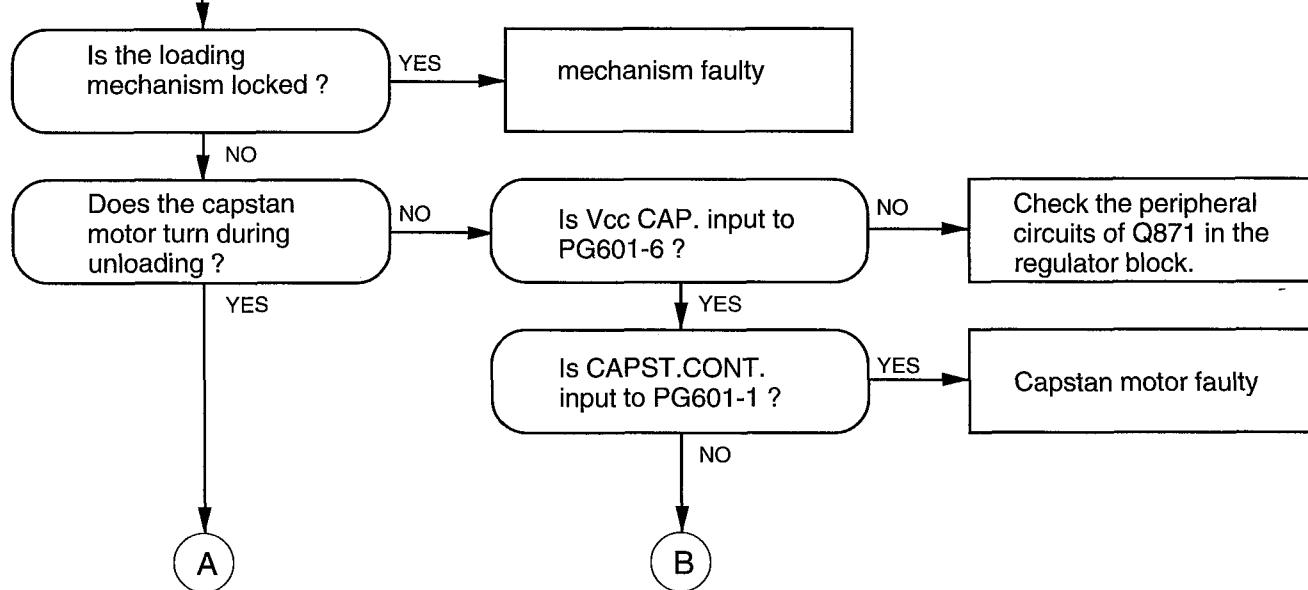

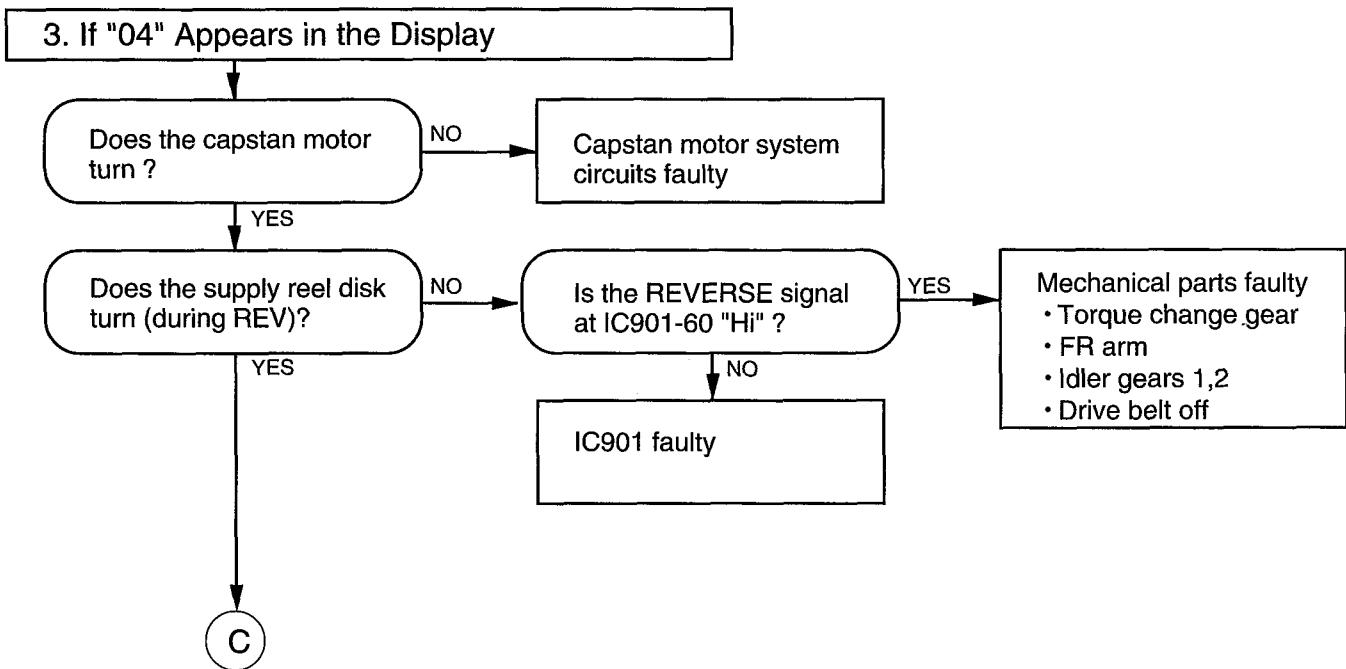

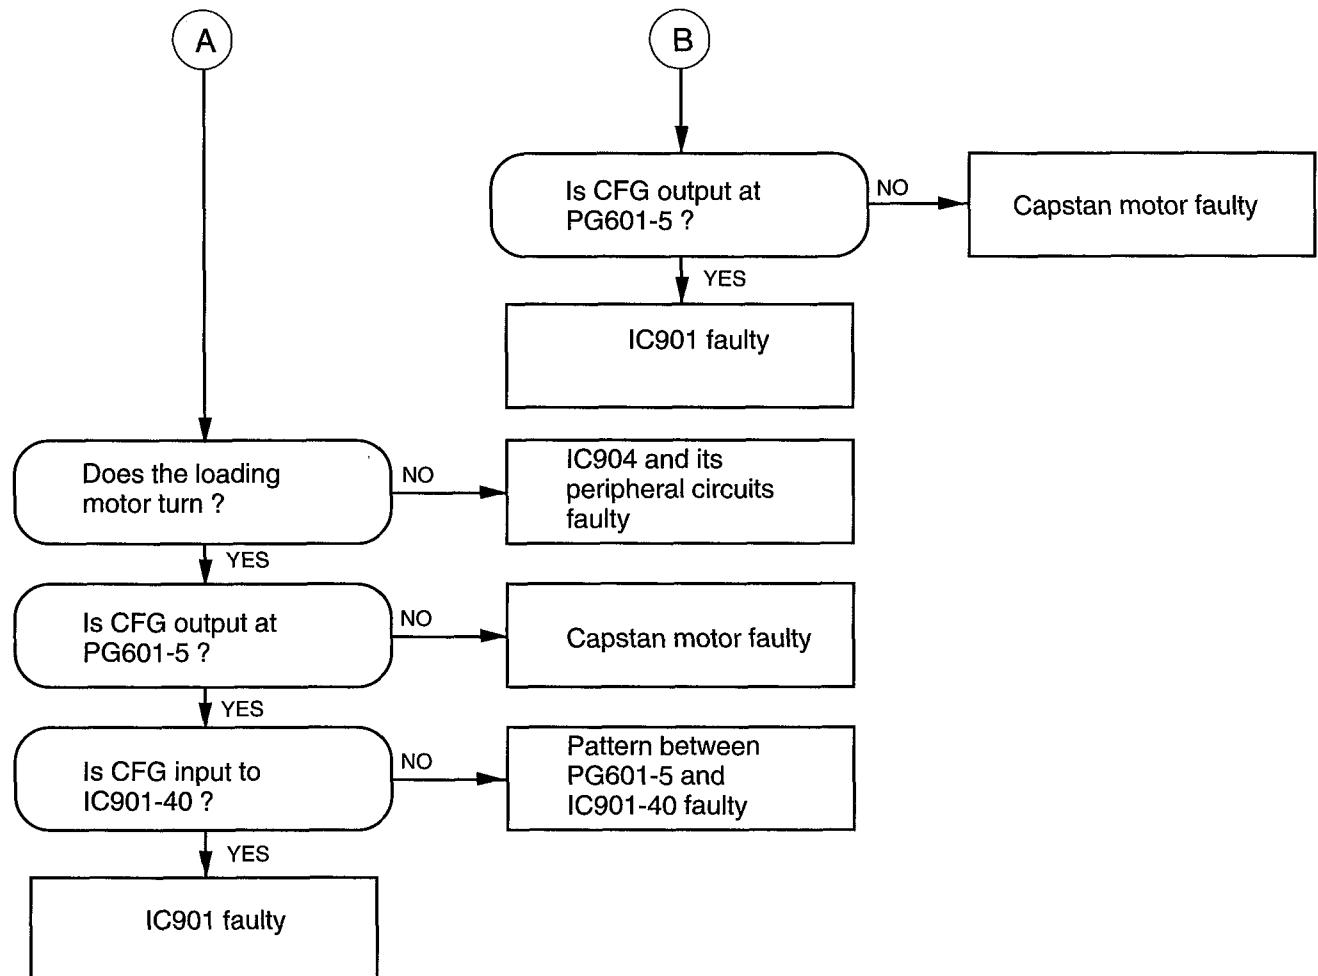

## Troubleshooting According to Malfunction Display

### 1. If "01" Appears in the Display

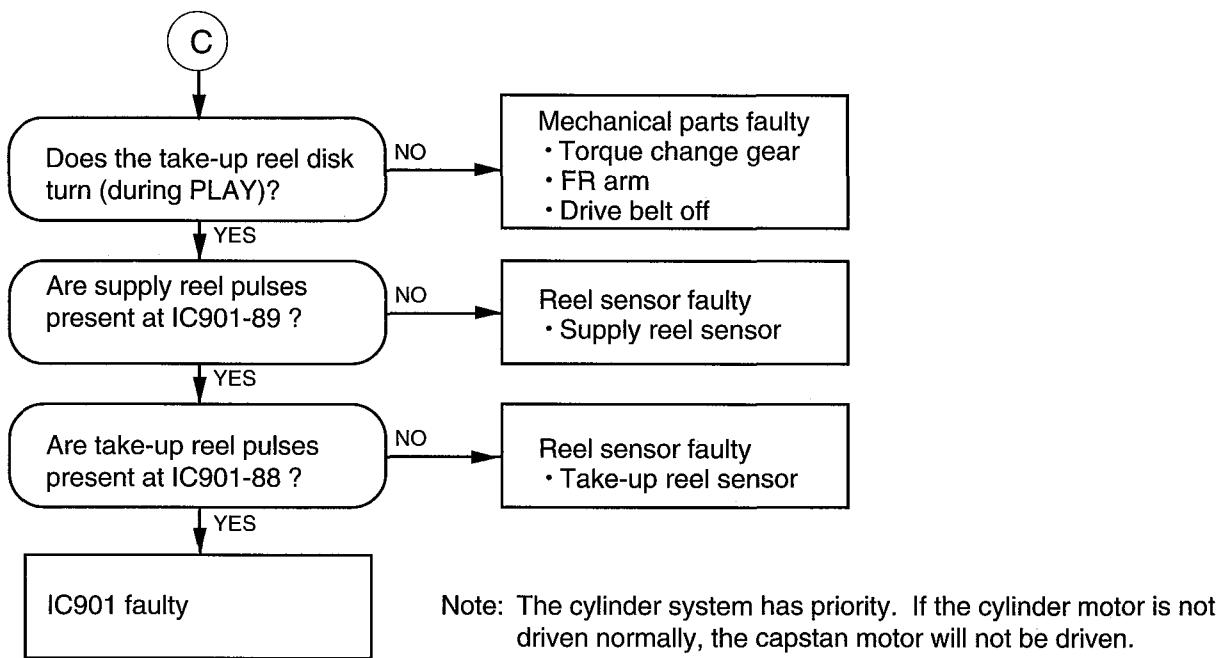

### 2. If "02" Appears in the Display

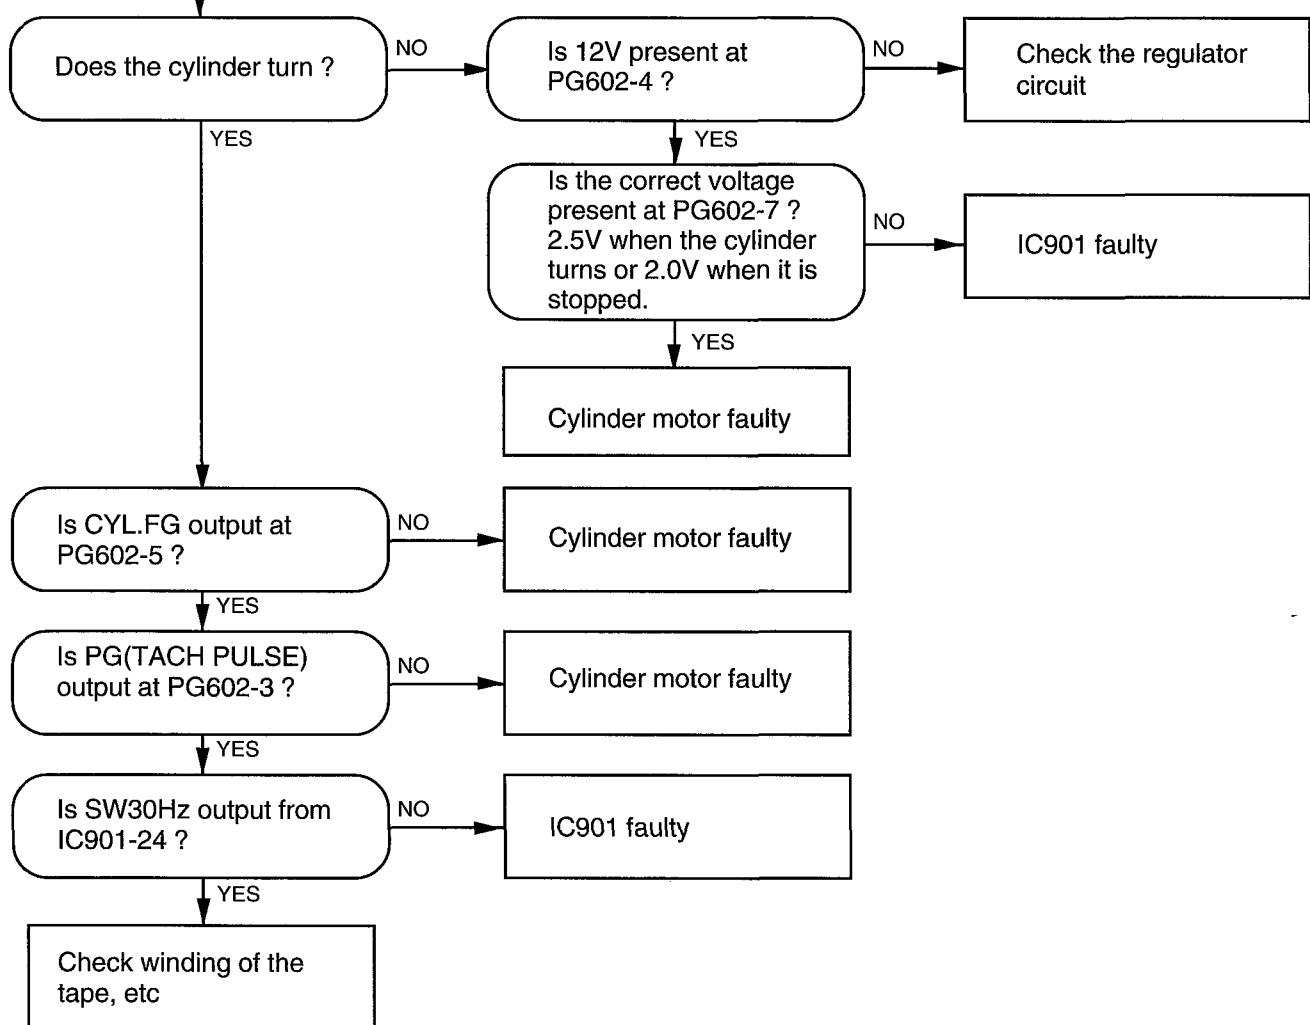

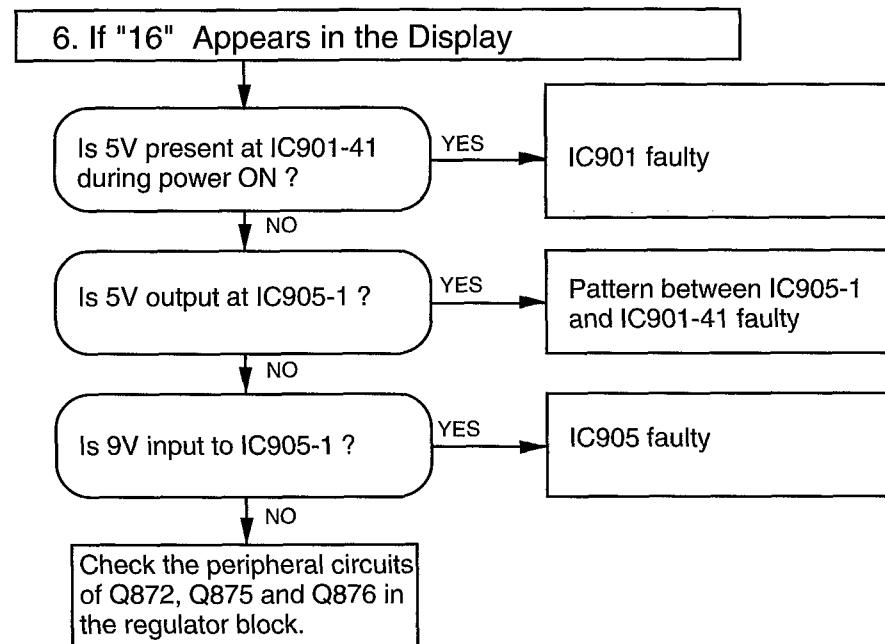

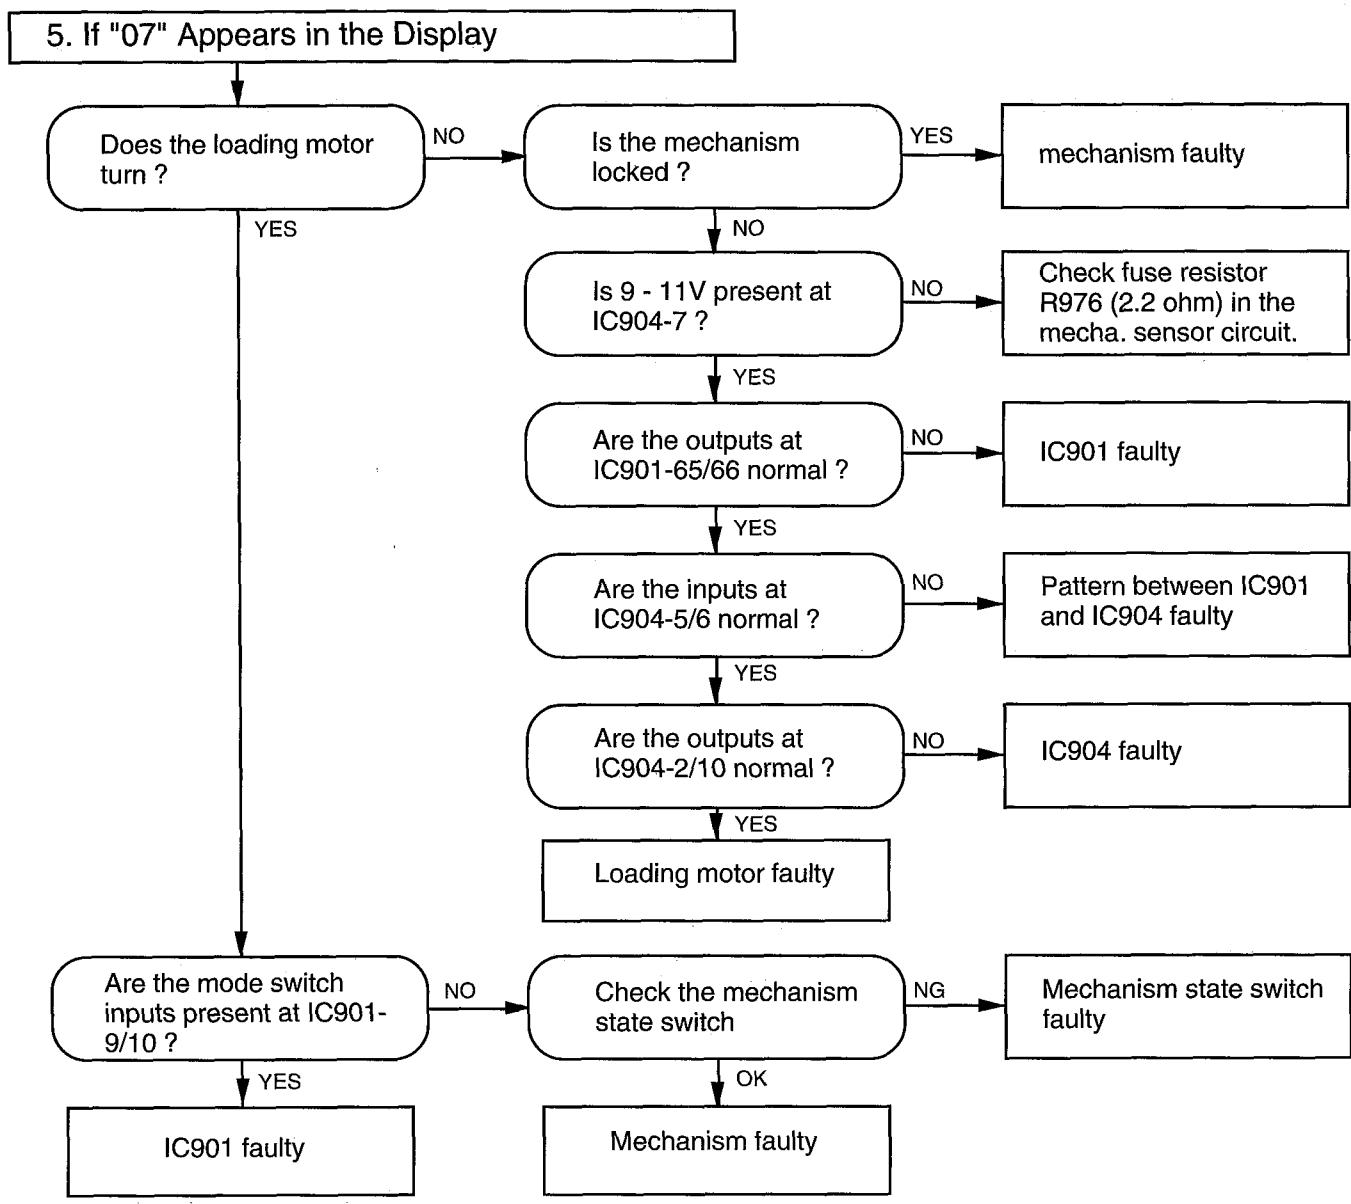

To next page.

#### 4. If "05" Appears in the Display

## Troubleshooting the Switching Regulator

This section summarizes the troubleshooting of defects in the switching regulator. Perform diagnosis, taking each defective phenomenon into consideration. Even if the same defective phenomenon appears, it may be caused by other circuits, not by the switching regulator, so use this item as a reference.

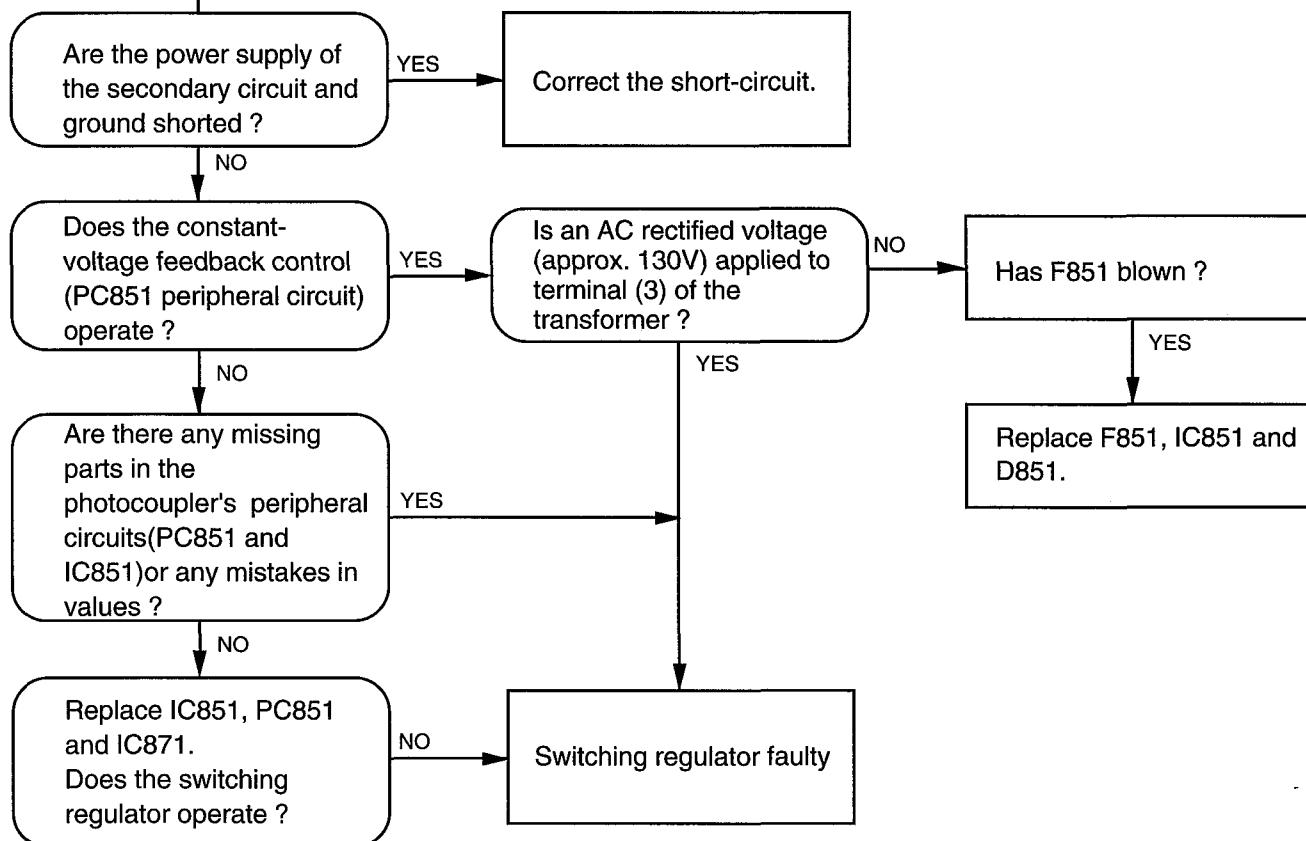

### Cautions when checking and repairing the switching regulator circuit

When using test equipment to check the primary circuit (circuit No. 8XX) of the power supply, use a two-pole AC outlet for the test equipment (attach a conversion adapter to the test equipment plug to connect it to a three-pole outlet).

### Be careful of electric shock

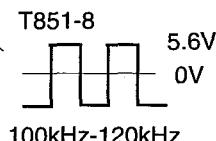

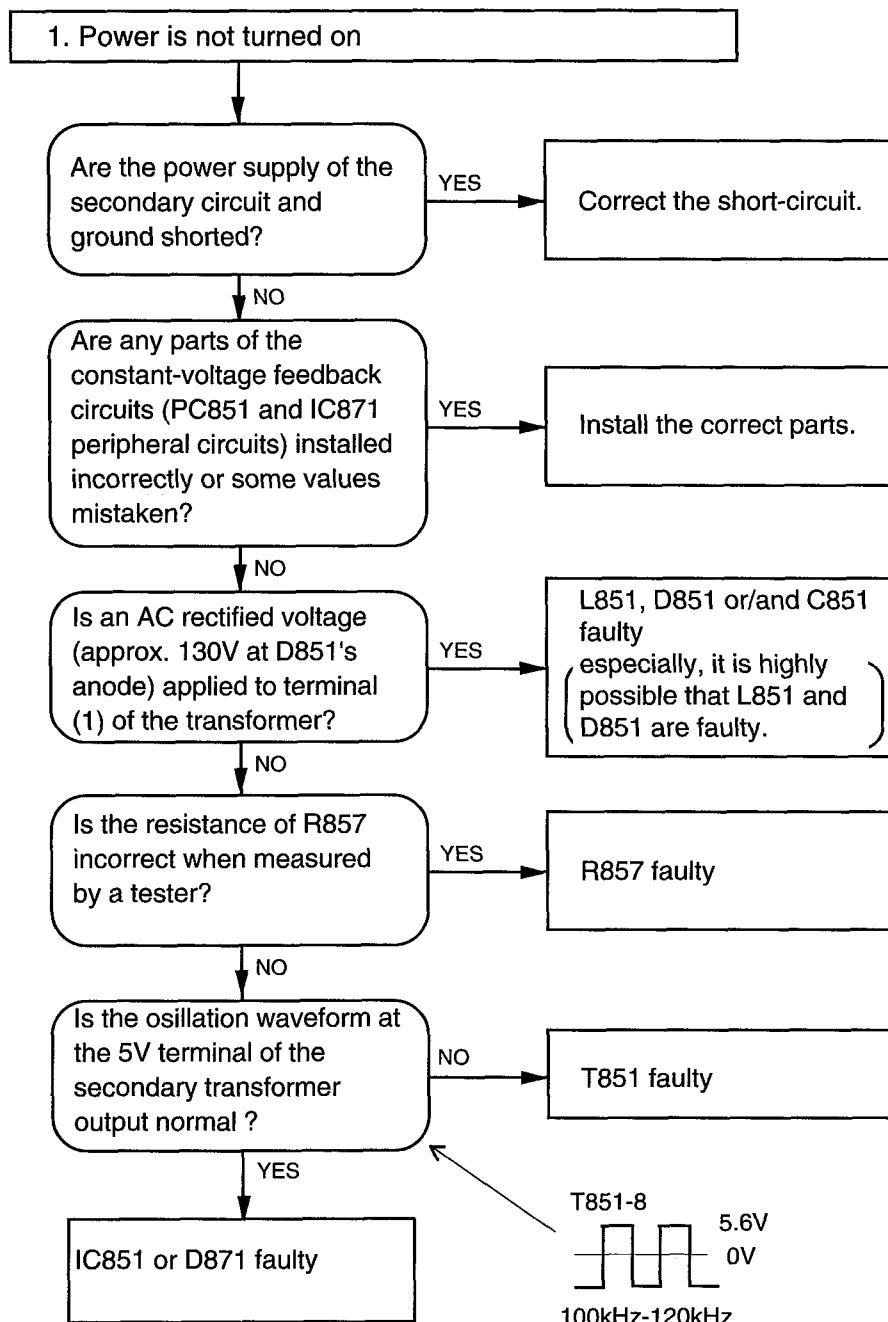

A heat sink which generates a high voltage is provided with IC851 in the switching regulator block. "HIGH VOLTAGE" is printed on the heat sink. Take great care of this section when servicing or handling the VCR when it is turned on. (Supplement: The heat sinks of Q871 and Q872 do not generate a high voltage.)

### Method to judge that the switching regulator is faulty

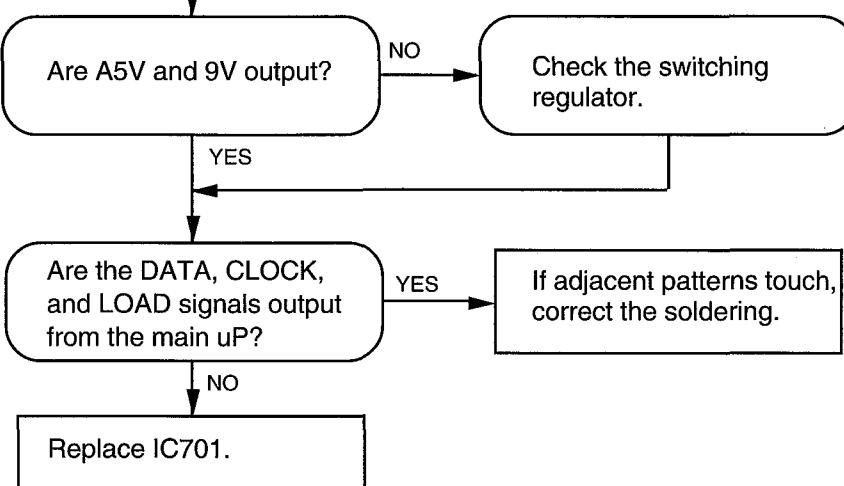

## Troubleshooting by Observing Defective Phenomena

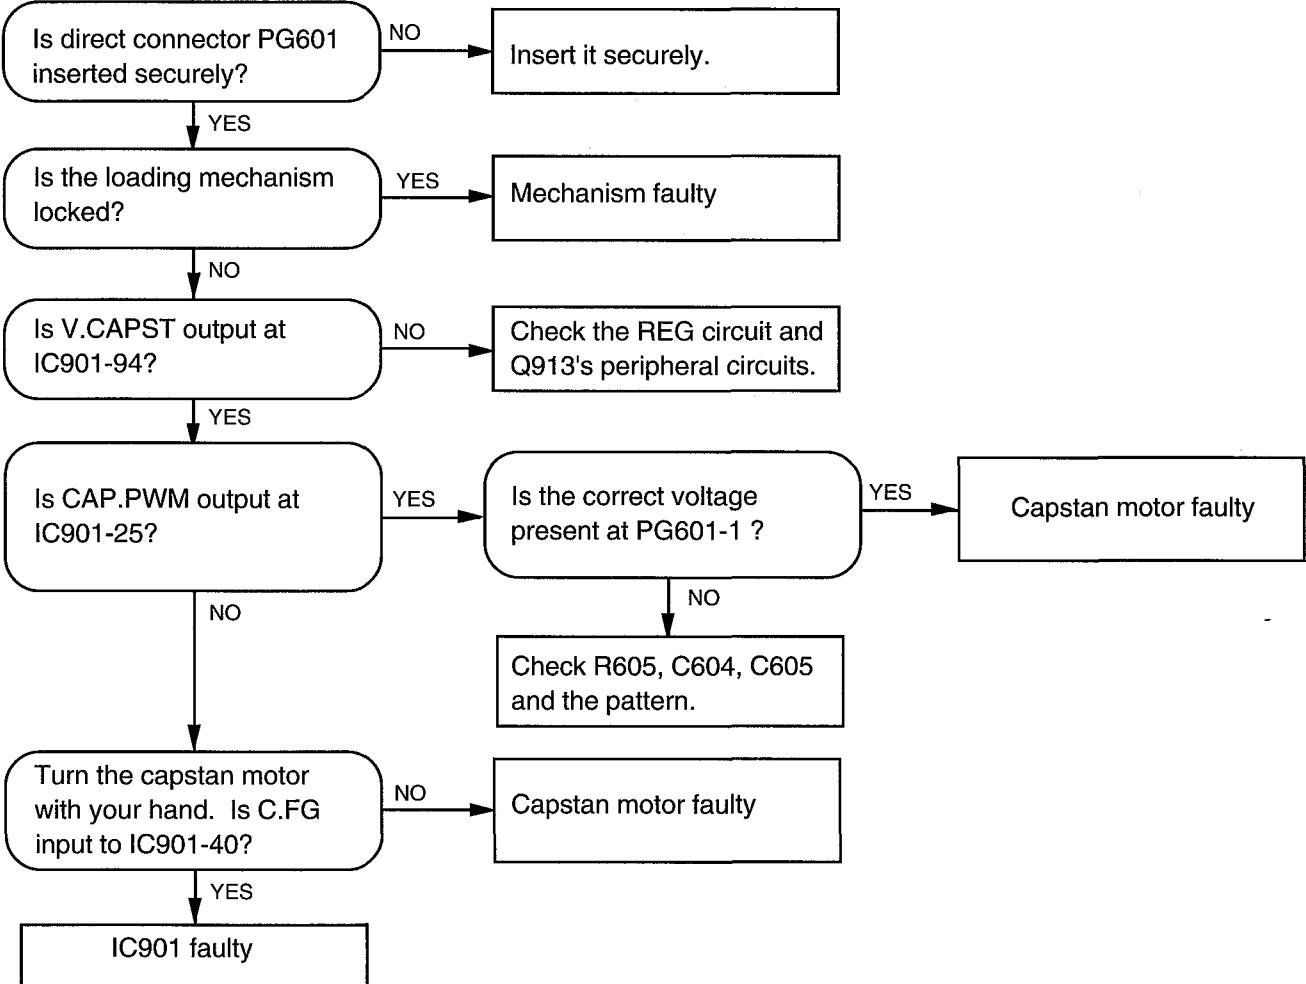

If the switching regulator is normal and there is a defect in another circuit (shorting between the power supply and ground of the secondary circuit), the protective function of IC851 operates and the power is not turned on. If a defect occurs in the switching regulator, a phenomenon such that the VCR power is not turned on or the power fuse has blown also occurs.

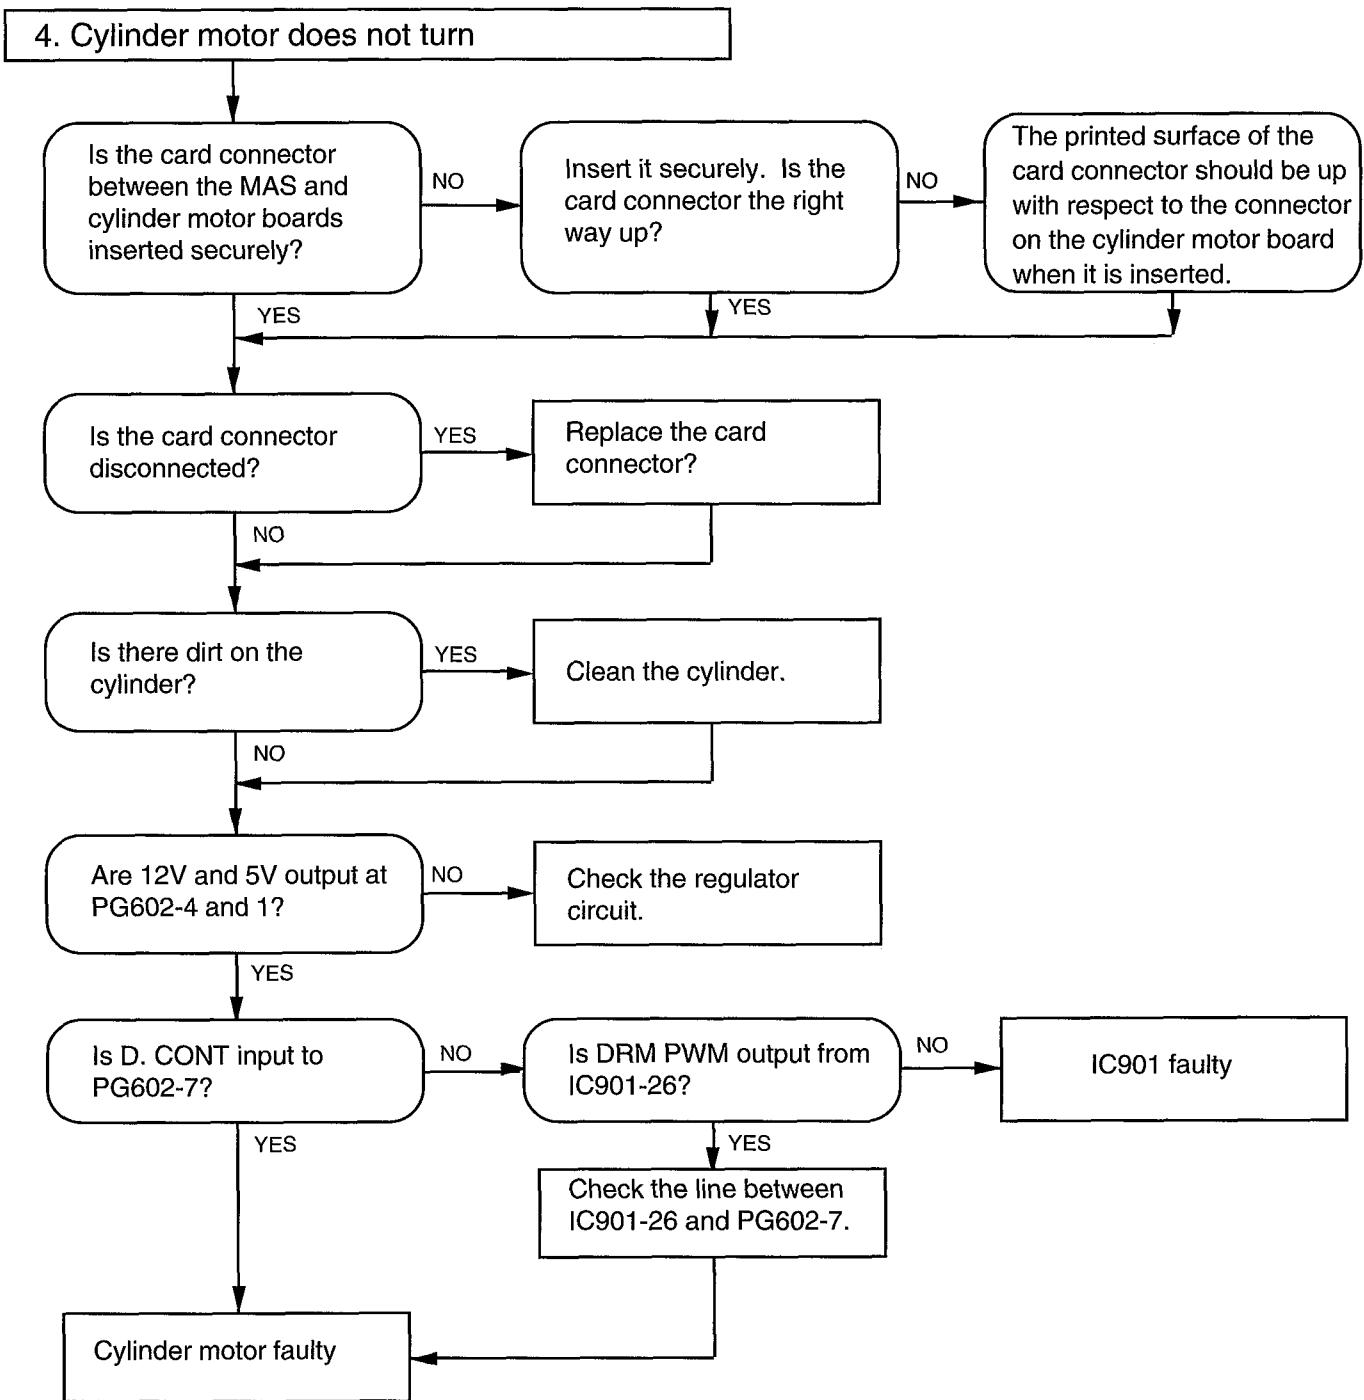

## 2. LCD does not light

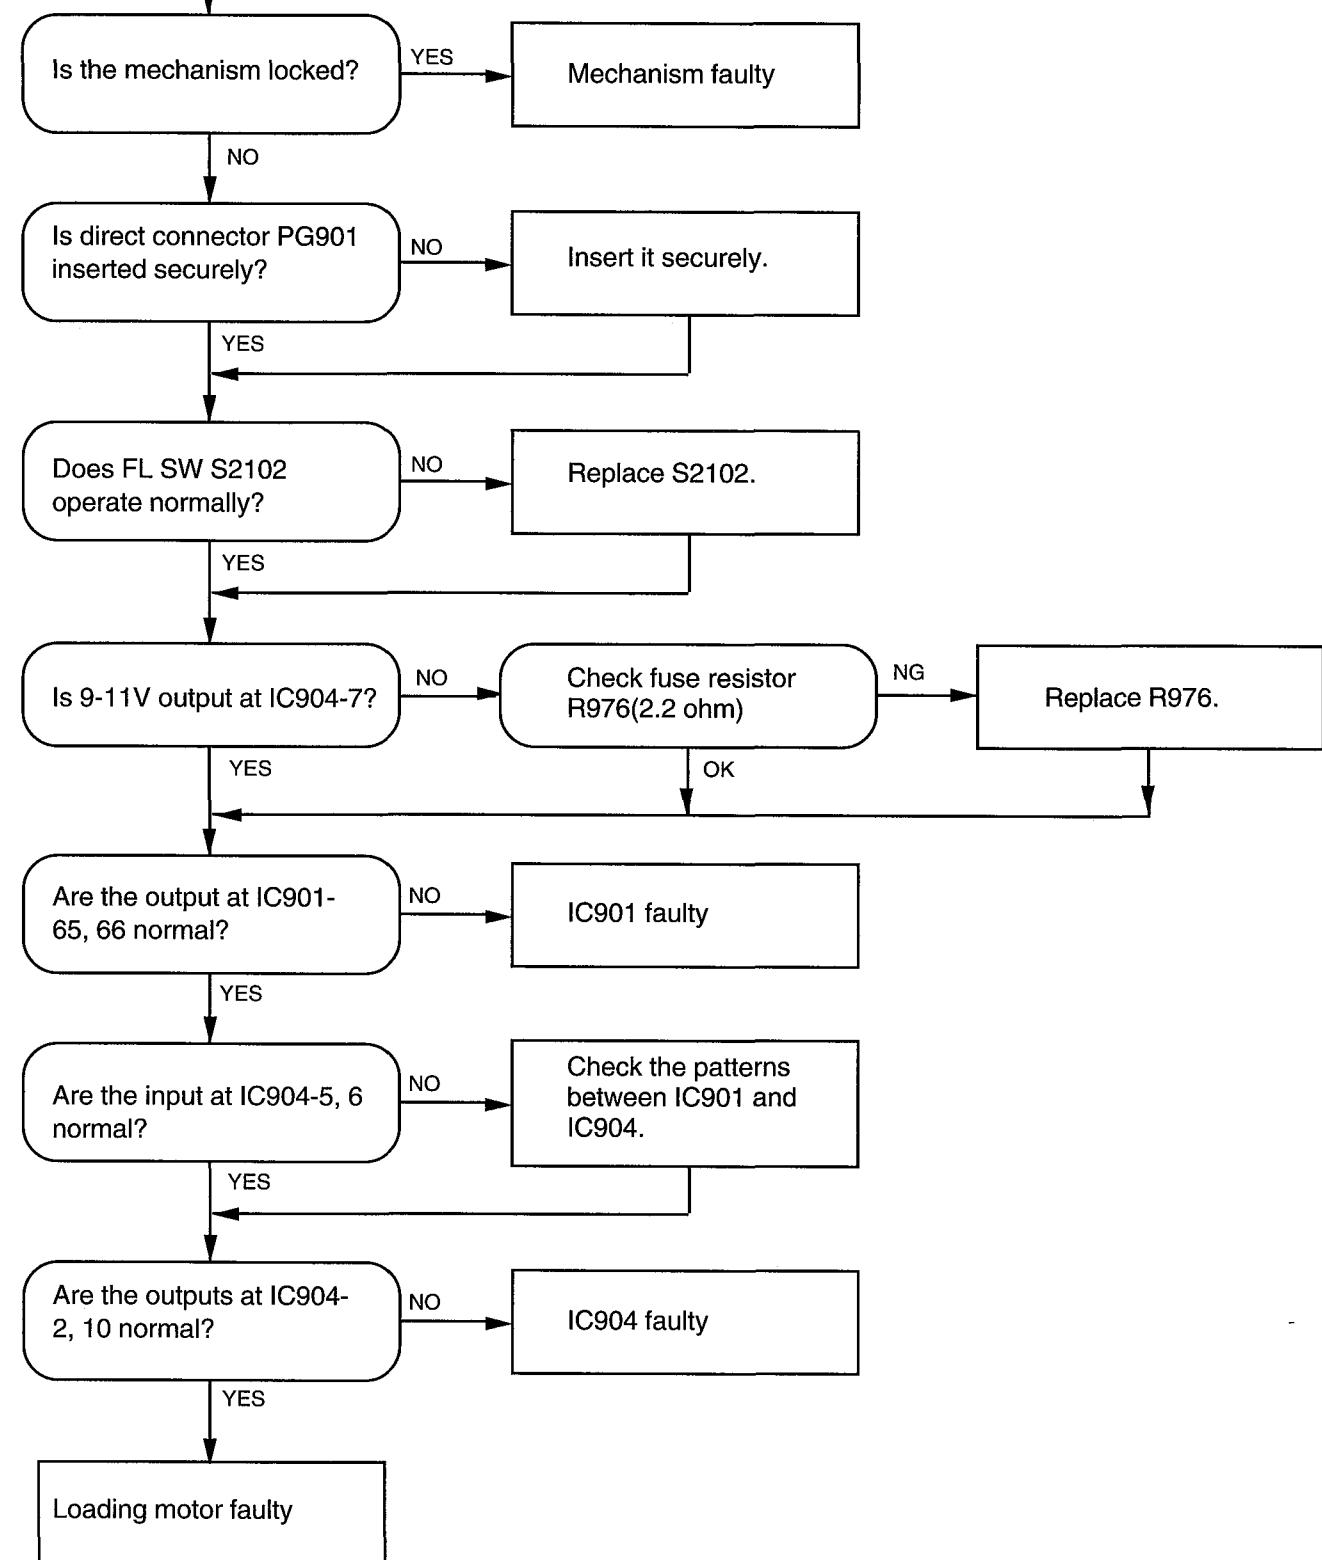

## 3. Capstan motor does not turn

5. Loading motor does not turn
